TRANSMISSION & DISTRIBUTION ACCESSORIES

Compression Solutions — high temperatures, voltages up to 765 kV and heat dissipation

Product Catalog

Founded in 1984, AFL is an international manufacturer providing end-to-end solutions to the energy, service provider, enterprise, hyperscale and industrial markets as well as several emerging markets.

AFL's products are in use in over 130 countries and include fiber optic cable and hardware, transmission and substation accessories, outside plant equipment, connectivity, test and inspection equipment, fusion splicers and training.

AFL also offers a wide variety of services supporting data center, enterprise, wireless and outside plant applications.

AFL is dedicated to bringing our customers a quality product as well as delivering superior value.

Introduction

General

AFL has led in the development of aluminum conductor accessories since the late 1890s. More than 80 years of continuous research, development and field experience have resulted in AFL's superior accessory products.

Compression Accessories

AFL has the industry's most complete line of compression accessories-dead ends, jumper terminals, joints, T-taps, repair sleeves and terminal connectors-designed to operate, regardless of the electrical load, at a temperature lower than that of the conductor. (See IEEE paper C72-188-6, "Effect of Elevated Temperature on the performance of Conductor Accessories.") In addition, AFL manufactures a complete line of Alloy Compression accessories. All AFL compression accessories are designed for aerial or ground installation with portable compressors. The above mentioned accessories for a given conductor size use the same aluminum and steel compression die size for both aluminum and steel parts.

Spacer-Dampers (See Motion Control)

The spacer damper combines the function of a spacer in maintaining conductor separation and controlling oscillation and the function of a damper in controlling aeolian vibration. It frequently provides the most economical approach to protecting multi-conductor bundle systems and is an AFL engineered product.

Spacers (See Motion Control)

The trend to higher transmission voltages and load currents has brought many changes in line construction, notably the substation of bundle conductor for single conductor on both AC and DC transmission lines. Spacers are necessary on horizontal bundle construction to prevent damage to subconductors from wind movement, ice unloading and keep subconductors separated when electrical forces tend to force them together.

AFL's work on spacers for bundles EHV lines started in 1954. The first commercial design was the articulated-type spacers which are still giving good service after 30 years in operation.

AFL's research and development led to the introduction of closed-spring type spacers, which have excellent service records on thousands of miles of bundle conductor. Three-bundle and four-bundle spacers were developed as the need arose. Recently, a style of spacer employing elastomer bushings was developed. The Speed-Grip® design provides a firm but cushioned grip on the conductor and allows rapid installation without special tools.

For unusual line construction, special engineering data for spacer applications are available through AFL.

Vibration Dampers (See Motion Control)

The AFL vibration damper (U.S. Patent 3,052,747) is an energy dissipation device for removing the energy of vibration imparted to a conductor by wind. Conductor vibration induces a relative motion between the clamp and the inertia weights which causes flexure of the steel cable, resulting in dissipation of mechanical energy by friction between the strands of the damper cable. In contrast to most tuned damping devices, which operate best only near their natural frequencies, the AFL vibration damper is designed for efficient transfer and dissipation of energy for the entire spectrum of frequencies that occur on transmission lines. For a detailed discussion see "Panel Discussion on Aeolian Vibration." Part IV, EEI Transmission and Distribution Committee, January 1972.

Vibration protection with AFL is much more than a product. It is a proven engineered system backed by more than 60 years of experience. This technical expertise is available to transmission system engineers in the form of specific, comprehensive computations based on the particular input factors of your system.

Introduction (cont.)

Parallel Groove Clamps

The geometry of the AFL universal groove represents an engineering achievement: an optimum shape for both electrical and mechanical efficiency for a range of conductor sizes. This groove shape (U.S. Patent 3,100,672) is used for catalog series 390,480, and 580.

Groove for 390 Series, used for service drops, and 480 Series, used for full load connections, are protected with a film of grease.

Aluminum bolts used in parallel groove clamps have an alumilite 205 finish and a thin coating of inhibitor compound. The hard finish and lubrication reduce thread friction and provide greater clamping force on the conductor for a given torque.

These bolts will not seize. Benefits of aluminum bolts also include equalized expansion and contraction and contraction with temperature changes and favorable modulus of elasticity for "spring follow-up."

Joint Compounds (See Compounds)

As long ago as the 1800s, it was known that the use of petrolatum improves an electric contact by preventing oxidation on clean metal surfaces. A half century of research and use has demonstrated that for both aluminum and copper, contact surfaces should be coated with a suitable grease-type compound.

Compressors, Hydraulic (See Tools & Equipment)

Hydraulic compressors are used for applying compression fittings to aluminum conductors and steel and/or alumoweld overhead ground wire. AFL offers the most complete line of portable hydraulic compressors in the industry: 12, 30, 60, 100 and 150 ton.

Accompanying the compressors are portable gasoline and electric oil hydraulic pumps, tailored to rugged field use and offering manual and/or remote control. All pumps and compressors operate at one pressure, 10,000 psi, and have one type of quick coupling system which permits complete interchangeability.

Comealongs

Comealongs are stringing tools designed for pulling conductors to initial sag tension for dead end installation. AFL comealongs are a highly engineered and tested product. Eyebolts are high strength forged steel. Bails receive both magnaflux and dye check inspection of metal quality. Prior to shipment, a final pulling test is made on every comealong at 125% of its recommended tension limit.

STANDARD COMPRESSION

Standard Compression Accessories for Stranded Aluminum Conductors

AFL has the industry's most complete line of compression accessories. This includes dead ends, joints, repair sleeves, jumper connectors, terminal connectors, tee connectors and tee taps. Compression accessories are available in sizes and strandings to fit the following types of conductors: ACSR, AAC, AAAC, ACAR, EHS ACSR, AWAC, Alumoweld® and steel ground wire. For accessory applications of uncommon conductors, contact the AFL Technical Support Team at 1.800.866.7385.

All compression accessories are designed to operate at a temperature 15% to 25% cooler than the conductor. Standard compression accessories are designed for conductor operating temperatures up to 120° C (248° F). For applications exceeding this operating temperature, see the HiTemp® Compression Accessories Catalog.

Dead Ends

Designed in the mid-1920s, the Standard Dead End is a full tension device designed to attach the conductor to the line structure while maintaining the electrical current.

- ANSI C119.4 Class A qualified.
- Designed for full tension use, maintaining a minimum of 95% of the ASTM rated strength of the conductor.
- Steel eye can be oriented in the field prior to installation.
- Tongue is manufactured with a 15° angle.
- Permanent markings for ease of installation and identification.
- Felt washer between the eye and aluminum body provides water protection.

Compression Joints

The Standard Joint is a full tension device designed to join two conductors together in mid-span.

- ANSI C119.4 Class A qualified.
- Designed for full tension use, maintaining a minimum of 95% of the ASTM rated strength of the conductor.
- Permanent markings for ease of installation and identification.

Repair Sleeves

The Repair Sleeve will restore the conductor to 95% of its rated strength, where up to 1/3 of the aluminum strands are damaged.

- ANSI C119.4 Class A qualified.
- Permanent markings for ease of installation and identification.

Terminal Connectors

Terminal Connectors are limited tension devices used to maintain the electrical current through a line junction (also known as paddle, spade, lug or jumper).

- ANSI C119.4 Class A qualified.
- Designed for limited tension use, maintaining a minimum of 40% of the ASTM rated strength of the conductor.
- Standard NEMA pad spacing.
- Both sides of the pad are finished, creating excellent contact surfaces.
- Available in straight, 15 and 90 degree angles.
- Permanent markings for ease of installation and identification.

Standard Compression Catalog Numbering System

TYPE OF ACCESSORY	DIE SIZE	BORE CODE
80	44	184

The simplified AFL catalog numbering system for compression accessories facilitates specifying, ordering and inventory control. The catalog number is stamped on each compression accessory for easy and positive field identification.

Example: Catalog No. 8130.116

The catalog number shown (8130.116) is an ACSR dead end body with a single tongue (81), requiring a size 30AH compressor die (30) and for a conductor size which utilizes the given bore code (116).

Type of Accessory

Steel Ground Wire or Alumoweld
- 45 ..... Dead End
- 49 ..... Joint

All Conductor Types (except Steel Ground Wire and Alumoweld)
- 52 ..... Repair Sleeve

All Conductor Types
- 50 ..... Jumper (Loop) Connector
- 51 ..... 15° Terminal Connector
- 53 ..... Tee Tap (cable/flat) Open Run
- 55 ..... Tee Connector (cable/cable) Open Run
- 56 ..... Straight Terminal Connector
- 58 ..... 90° Terminal Connector

AAC Conductors
- 70 ..... Joint
- 71 ..... Dead End Body (single tongue)
- 72 ..... Dead End Body (double tongue)

ACAR and ACAR Alloy Conductors
- 75 ..... Joint
- 76 ..... Dead End Body (single tongue)
- 77 ..... Dead End Body (double tongue)

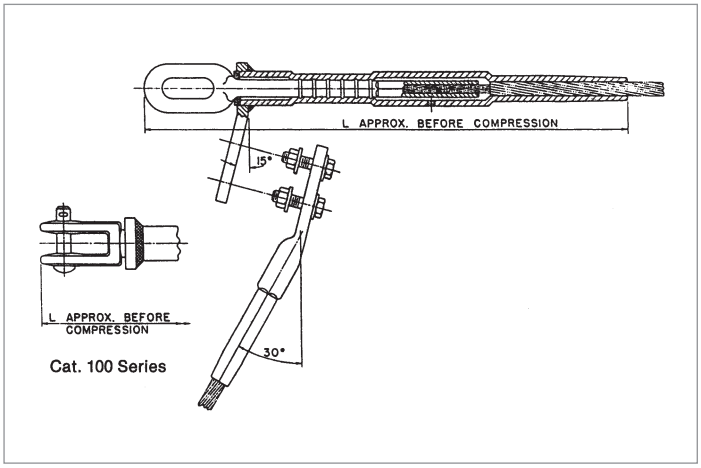
ACSR Conductors
- 80 ..... Joint
- 81 ..... Dead End Body (single tongue)
- 82 ..... Dead End Body (double tongue)

EHS ACSR Conductors
- 83 ..... Dead End Body (single tongue)
- 84 ..... Joint

AWAC Conductors
- 85 ..... Joint
- 86 ..... Dead End Body (single tongue)

Single Components
- 40 ..... Steel Sleeve
- C61-C68..... Adjustable Clevis Dead Ends
- 90-94 and E95-E98 ..... Eye Dead Ends
- 100-103 and A100X-A103X ... Clevis Dead Ends

Compression Dead Ends—33100 Series for ACSR Conductor, Eye or Clevis Type, Single Tongue



The 33100 Series Dead End Assembly is specifically designed for ACSR conductors. The aluminum body of the dead end is fabricated from AFL seamless drawn aluminum. The tongue and terminal pad are constructed with a 15º angle, which permits the terminal connector to be bolted in the straight or 30º position.

All dead ends are designed for full tension use, achieving a minimum of 95% of the ASTM rated strength of the conductor on which they are used. Each dead end assembly comes with a dead end body, steel eye or clevis, 15º terminal and aluminum hardware.

For die size sections 30AH and above, the end tapers of the compression portions of all compression accessories are supplied with a high voltage finish. Corona bolts are furnished as standard on 15º terminals for these section sizes.

The square edges of bolted pads on compression accessories could cause Corona in environments greater than or equal to 345 kV. Pads with edges and corners rounded can be supplied by adding the catalog suffix "EHV".

Ordering Instructions

Step 1: Assembly Catalog Number
Determine the assembly catalog number based on the conductor being used.

Step 2: Terminal Connector
For an assembly without a terminal connector, use 'NT'.
For an assembly with a terminal connector, leave blank.

Step 3: Extra High Voltage Finish
For Extra High Voltage Finish, use 'EHV'.
For Standard Finish, leave blank.

Step 4: Assemble Catalog Number.

Assy Catalog Number + **Terminal Connector** + **EHV Finish**

Example:
For 795 Drake conductor with no terminal and EHV finish, the complete catalog number is:

E33142NTEHV

Notes:
1. Eye and Clevis Dimensions are on page 119.
2. Pad Dimensions are on page 117.
3. AFL Filler Compound (AFC) Requirements are on page 115.
4. Installation Instructions for Dead Ends are on page 127.
5. Installation Instructions for Terminals are on page 131.

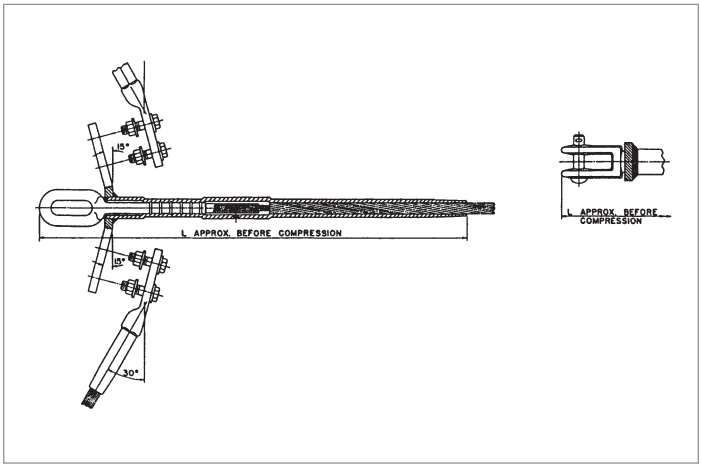
Compression Dead Ends—33300 Series for ACSR Conductor, Eye or Clevis Type, Double Tongue



The 33300 Series Double Tongue Dead End Assembly is specifically designed for ACSR conductors. The aluminum body of the dead end is fabricated from AFL seamless drawn aluminum. The tongue and terminal pad are constructed with a 15° angle, which permits the terminal connector to be bolted in the straight or 30° position.

All dead ends are designed for full tension use, achieving a minimum of 95% of the ASTM rated strength of the conductor on which they are used. Each dead end assembly comes with a dead end body, steel eye or clevis, two 15° terminals and aluminum hardware.

For die size sections 30AH and above, the end tapers of the compression portions of all compression accessories are supplied with a high voltage finish. Corona bolts are furnished as standard on 15° terminals for these section sizes.

The square edges of bolted pads on compression accessories could cause Corona in environments greater than or equal to 345 kV. Pads with edges and corners rounded can be supplied by adding the catalog suffix "EHV".

Ordering Instructions

Step 1: Assembly Catalog Number
Determine the assembly catalog number based on the conductor being used.

Step 2: Terminal Connector
For an assembly without a terminal connector, use 'NT'.
For an assembly with a terminal connector, leave blank.

Step 3: Extra High Voltage Finish
For Extra High Voltage Finish, use 'EHV'.
For Standard Finish, leave blank.

Step 4: Assemble Catalog Number.

Assy Catalog Number	+	Terminal Connector	+	EHV Finish

Example:
For 795 Drake Conductor with no terminal and EHV finish, the complete catalog number is:

E33342NTEHV

Notes:
1. Eye and Clevis Dimensions are on page 119.
2. Pad Dimensions are on page 117.
3. AFL Filler Compound (AFC) Requirements are on page 115.
4. Installation Instructions for Dead Ends are on page 127.
5. Installation Instructions for Terminals are on page 131.

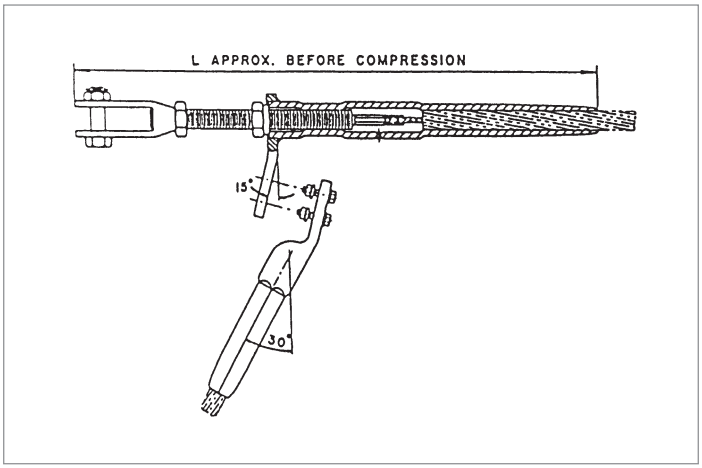
Compression Dead Ends—43600 Series for ACSR Conductor, Adjustable Clevis Type, Single Tongue



The 43600 Series Adjustable Clevis Dead End Assembly is specifically designed for ACSR conductors. The aluminum body of the dead end is fabricated from AFL seamless drawn aluminum. The tongue and terminal pad are constructed with a 15° angle, which permits the terminal connector to be bolted in the straight or 30° position.

All dead ends are designed for full tension use, achieving a minimum of 95% of the ASTM rated strength of the conductor on which they are used. Each dead end assembly comes with a dead end body, adjustable steel clevis, 15° terminal and aluminum hardware.

For die size sections 30AH and above, the end tapers of the compression portions of all compression accessories are supplied with a high voltage finish. Corona bolts are furnished as standard on 15° terminals for these section sizes.

The square edges of bolted pads on compression accessories could cause Corona in environments greater than or equal to 345 kV. Pads with edges and corners rounded can be supplied by adding the catalog suffix "EHV".

Ordering Instructions

Step 1: Assembly Catalog Number
Determine the assembly catalog number based on the conductor being used.

Step 2: Terminal Connector
For an assembly without a terminal connector, use 'NT'.
For an assembly with a terminal connector, leave blank.

Step 3: Extra High Voltage Finish
For Extra High Voltage Finish, use 'EHV'.
For Standard Finish, leave blank.

Step 4: Assemble Catalog Number.

Assy Catalog Number	+	Terminal Connector	+	EHV Finish

Example:
For 795 Drake conductor with no terminal and EHV finish, the complete catalog number is:

C43642NTEHV

Notes:
1. Adjustable Clevis Dimensions are on page 120.
2. Pad Dimensions are on page 117.
3. AFL Filler Compound (AFC) Requirements are on page 115.
4. Installation Instructions for Dead Ends are on page 129.
5. Installation Instructions for Terminals are on page 131.

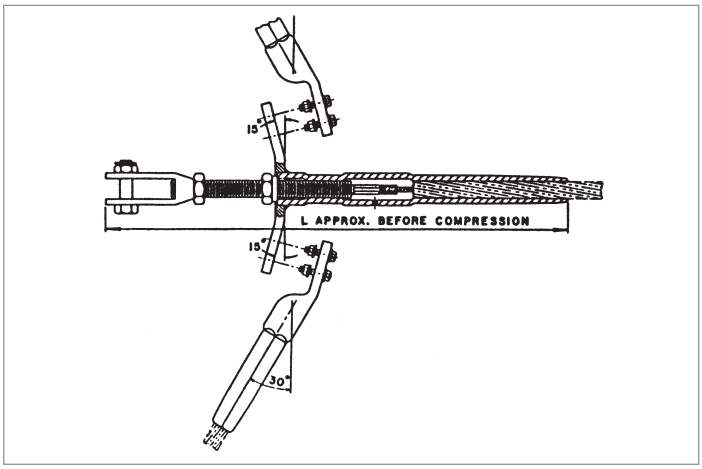
Compression Dead Ends—43800 Series for ACSR Conductor, Adjustable Clevis Type, Double Tongue



The 43800 Series Adjustable Clevis Dead End assembly is specifically designed for ACSR conductors. The aluminum body of the dead end is fabricated from AFL seamless drawn aluminum. The tongue and terminal pad are constructed with a 15° angle, which permits the terminal connector to be bolted in the straight of 30° position.

All dead ends are designed for full tension use, achieving a minimum of 95% of the ASTM rated strength of the conductor on which they are used. Each dead end assembly comes with a dead end body, adjustable steel clevis, two 15° terminals and aluminum hardware.

For die size sections 30AH and above, the end tapers of the compression portions of all compression accessories are supplied with a high voltage finish. Corona bolts are furnished as standard on 15° terminals for these section sizes.

The square edges of the bolted pads of the compression accessories could cause Corona. Pads with edges and corners rounded can be supplied by adding the catalog suffix "EHV".

Ordering Instructions

Step 1: Assembly Catalog Number
Determine the assembly catalog number based on the conductor being used.

Step 2: Terminal Connector
For an assembly without a terminal connector, use 'NT'.
For an assembly with a terminal connector, leave blank.

Step 3: Extra High Voltage Finish
For Extra High Voltage Finish, use 'EHV'.
For Standard Finish, leave blank.

Step 4: Assemble Catalog Number.

Assy Catalog Number	+	Terminal Connector	+	EHV Finish

Example:
For 795 Drake conductor with no terminal and EHV finish, the complete catalog number is:

C43842NTEHV

Notes:
1. Adjustable Clevis Dimensions are on page 120.
2. Pad Dimensions are on page 117.
3. AFL Filler Compound (AFC) Requirements are on page 115.
4. Installation Instructions for Dead Ends are on page 129.
5. Installation Instructions for Terminals are on page 131.

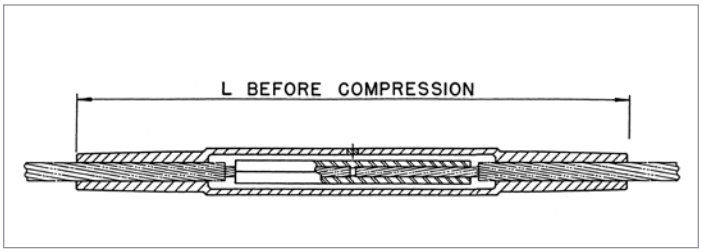
Compression Joints—33000 Series for ACSR Conductors



The 33000 Series Compression Joint Assembly is specifically designed for ACSR conductors. The aluminum body is fabricated from AFL seamless drawn aluminum.

All compression joints are designed for full tension use, achieving a minimum of 95% of the ASTM rated strength of the conductor on which they are used. Each compression joint assembly comes with an aluminum joint and a steel sleeve.

For die size sections 30AH and above, the end tapers of the compression portions of all compression accessories are supplied with a high voltage finish.

Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Example:

For 795 Drake ACSR conductor, the complete catalog number is:

33043

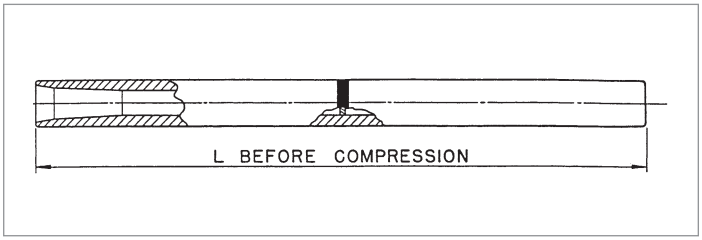
Compression Joints – Jiffy Joints—7500 Series for ACSR Conductors



The 7500 Series Compression Joint (Jiffy Joint) is designed for ACSR conductors. The aluminum body is fabricated from AFL seamless drawn aluminum. The compression joint is a single piece unit without a steel sleeve and comes prefilled with AFL Filler Compound (AFC).

All compression joints are designed for full tension use, achieving a minimum of 95% of the ASTM rated strength of the conductor on which they are used.

For die size sections 30AH and above, the end tapers of the compression portions of all compression accessories are supplied with a high voltage finish.

Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Example:

For 336.4 Merlin conductor, the complete catalog number is:

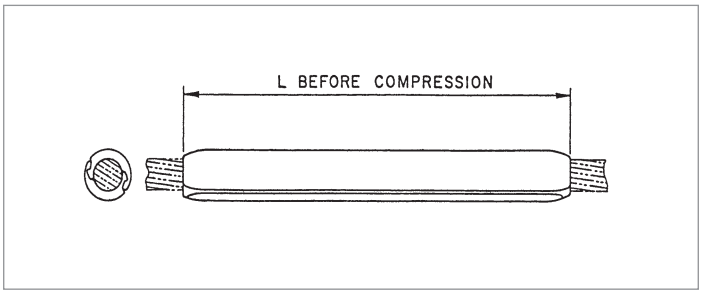
7514.719

JOINT CATALOG NUMBER	CONDUCTOR				DIE SIZE	WEIGHT		COLOR CODE	DIMENSION L	
	CODE NAME	AWG OR KCMIL	STRANDING AL/ST	DIA. IN	ALUMINUM HEX DIES	LBS	KG		IN	MM
7511.453	Raven	1/0	6/1	0.398	11AH	0.6	0.28	Yellow	14.0	356
7512.484	Quall	2/0	6/1	0.447	12AH	0.8	0.37	Gray	14.0	356
7513.542	Pigeon	3/0	6/1	0.502	13AH	1.1	0.50	Black	14.0	356
7513.625	Penguin	4/0	6/1	0.563	13AH	1.1	0.50	Pink	16.0	406
7514.719	Merlin	336.4	18/1	0.664	14AH	1.6	0.73	Clear	15.6	395
7524.871	Chickadee	397.5	18/1	0.743	24AH	2.8	1.27	Clear	19.6	497
7524.875	Pelican	477.0	18/1	0.814	24AH	2.8	1.27	Clear	22.1	560

Notes:

1. Joints are prefilled with compound.
2. Installation Instructions for Joints are on page 137.

Repair Sleeves—5200 Series for ACSR Conductors



The 5200 Series Repair Sleeve is designed for ACSR conductors. The repair sleeve incorporates an improved design of interlocking extrusions, providing a permanent grip on the conductor when compressed.

The repair sleeve will restore 95% of the rated strength of the conductor with up to one-third of the aluminum strands damaged.

Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Example:

For 795 Drake conductor, the complete catalog number is:

5230.3

REPAIR SLEEVE CATALOG NUMBER	CONDUCTOR				DIE SIZE	WEIGHT		DIMENSION L

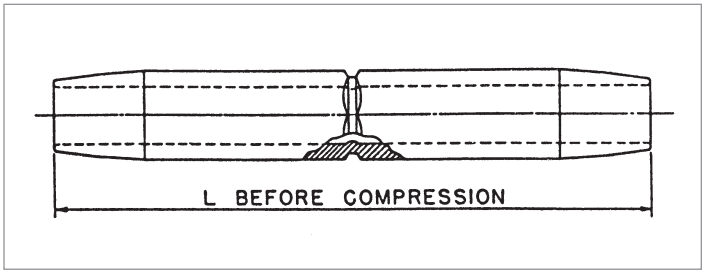
Jumper Connectors—5000 Series for ACSR Conductors



The 5000 Series Jumper Connector is designed for ACSR conductors. The jumper connector is fabricated from AFL seamless drawn aluminum. All jumper connectors are designed for limited tension use, maintaining a minimum of 40% of the ASTM rated strength of the conductor on which it is being used.

For die size sections 30AH and above, the end tapers of the compression portions of all compression accessories are supplied with a high voltage finish.

Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Example:

For 795 Drake conductor, the complete catalog number is:

5030.116

JUMPER CONNECTOR CATALOG NUMBER	CONDUCTOR				DIE SIZE	TOTAL WEIGHT		DIMENSION L

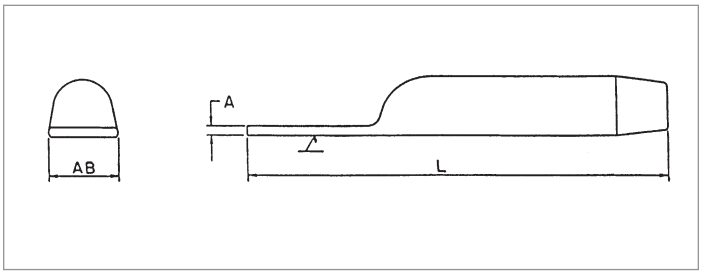
Terminal Connectors—5600 Series for ACSR Conductors, Straight



The 5600 Series Straight Terminal Connector is designed for ACSR conductors. The terminal connector is fabricated from AFL seamless drawn aluminum.

When used with the dead end, the straight terminal connector allows drop at a 15° angle. All terminal connectors are designed for limited tension use, maintaining a minimum of 40% of the ASTM rated strength of the conductor on which it is being used.

Ordering Instructions

Step 1: Assembly Catalog Number
Determine the assembly catalog number based on the conductor being used.

Step 2: Extra High Voltage Finish
For Extra High Voltage Finish, use 'EHV'.
For Standard Finish, leave blank.

Step 3: Assemble Catalog Number.

Assy Catalog Number + **EHV Finish**

Example:
For 795 Drake conductor with an EHV finish, the complete catalog number is:

5630.116EHV

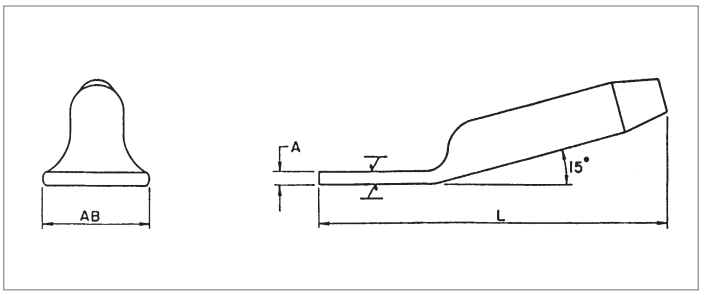
Terminal Connectors—5100 Series for ACSR Conductors, 15°



The 5100 Series 15° Terminal Connector is designed for ACSR conductors. The terminal connector is fabricated from AFL seamless drawn aluminum.

When used with the dead end, the 15° terminal connector can be bolted in either the straight or 30° position. All terminal connectors are designed for limited tension use, maintaining a minimum of 40% of the ASTM rated strength of the conductor on which it is being used. Aluminum hardware is supplied with the 15° terminal connector.

Ordering Instructions

Step 1: Assembly Catalog Number
Determine the assembly catalog number based on the conductor being used.

Step 2: Extra High Voltage Finish
For Extra High Voltage Finish, use 'EHV'.
For Standard Finish, leave blank.

Step 3: Assemble Catalog Number.

Assy Catalog Number + **EHV Finish**

Example:
For 795 Drake conductor with an EHV finish, the complete catalog number is:

5130.116EHV

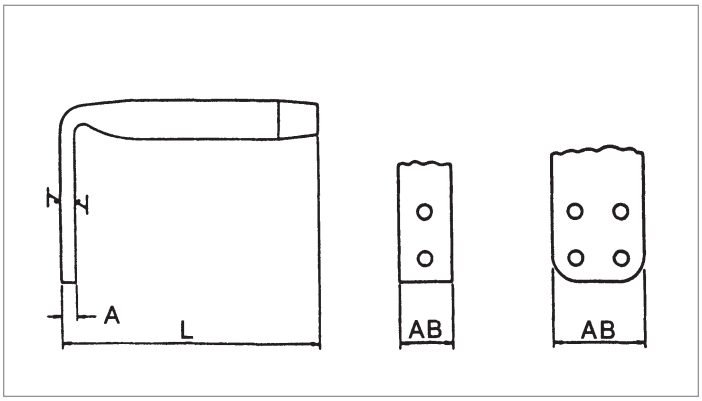
Terminal Connectors—5800 Series for ACSR Conductors, 90°



The 5800 Series 90° Terminal Connector is designed for ACSR conductors. The terminal connector is fabricated from AFL seamless drawn aluminum.

All terminal connectors are designed for limited tension use, maintaining a minimum of 40% of the ASTM rated strength of the conductor on which it is being used.

Ordering Instructions

Step 1: Assembly Catalog Number
Determine the assembly catalog number based on the conductor being used.

Step 2: Extra High Voltage Finish
For Extra High Voltage Finish, use 'EHV'.
For Standard Finish, leave blank.

Step 3: Assemble Catalog Number.

Assy Catalog Number + **EHV Finish**

Example:
For 795 Drake conductor with an EHV finish, the complete catalog number is:

5830.116EHV

Notes:
1. Pad Dimensions are on page 117.
2. AFL Filler Compound (AFC) Requirements are on page 115.
3. Installation Instructions for Terminals are on page 131.
4. Bolts, nuts and washers are not supplied with the 90° terminal connector.

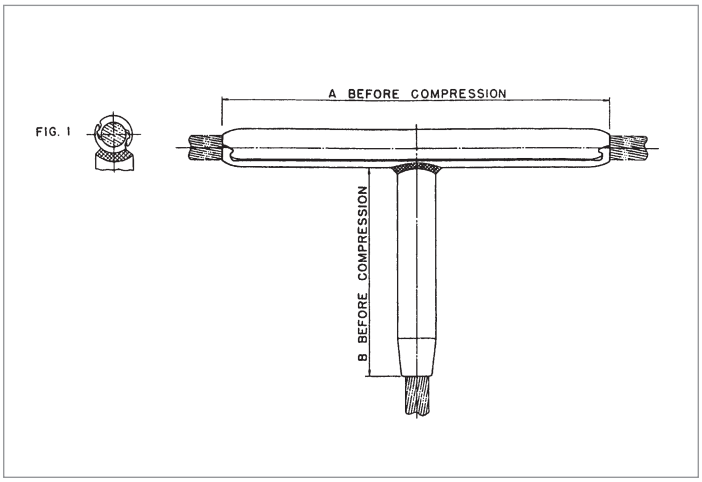
Tee Connector—5500 Series for ACSR Conductors, Open Run



The 5500 Series Tee Connector is a permanent drop designed for ACSR conductors. The tee connector is fabricated from AFL seamless drawn aluminum.

The run portion incorporates an improved design of interlocking extrusions, providing a permanent grip on the conductor when compressed.

The branch portion of the tee connector is designed for limited tension use, maintaining a minimum of 40% of the ASTM rated strength of the conductor on which it is being used.

For die size sections 30AH and above, the end tapers of the compression portions of all compression accessories are supplied with a high voltage finish.

Ordering Instructions

Step 1: Determine Run Catalog Number
Determine the run catalog number based on the conductor being used.

Step 2: Determine Branch Catalog Number
Determine the branch catalog number based on the conductor being used.

Step 3: Assemble Catalog Number

Run Catalog Number	+	Branch Catalog Number

Example:
For 795 Drake Conductor in both Run and Branch, the complete catalog number is:

5530.3 – 30.116

Notes:
1. AFL Filler Compound (AFC) requirements are on page 115.
2. Installation Instructions for Open Run Tee Connectors are on page 144.

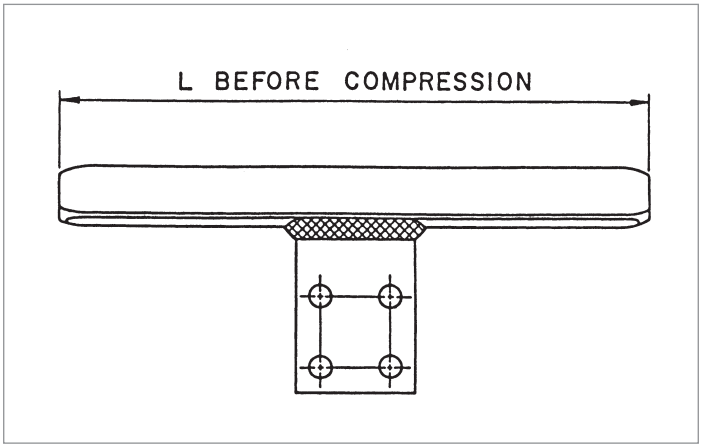
Tee Tap—5300 Series for ACSR Conductors, Open Run



The 5300 Series Tee Tap is a permanent or temporary drop designed for ACSR conductors. It is fabricated from AFL seamless drawn aluminum.

The run portion incorporates an improved design of interlocking extrusions, providing a permanent grip on the conductor when compressed.

For die size sections 30AH and above, the end tapers of the compression portions of all compression accessories are supplied with a high voltage finish.

Ordering Instructions

Step 1: Catalog Number
Determine the catalog number based on the conductor being used.

Step 2: Extra High Voltage Finish
For Extra High Voltage Finish, use 'EHV'.
For Standard Finish, leave blank.

Step 3: Assemble Catalog Number.

Catalog Number	+	EHV Finish

Example:
For 795 Drake conductor with EHV finish, the complete catalog number is:

5330.3EHV

Notes:
1. Pad Dimensions are on page 117.
2. AFL Filler Compound (AFC) requirements are on page 115.
3. Bolt sizes and torque recommendations are on page 118.
4. Installation Instructions for Open Run Tee Taps are on page 144.

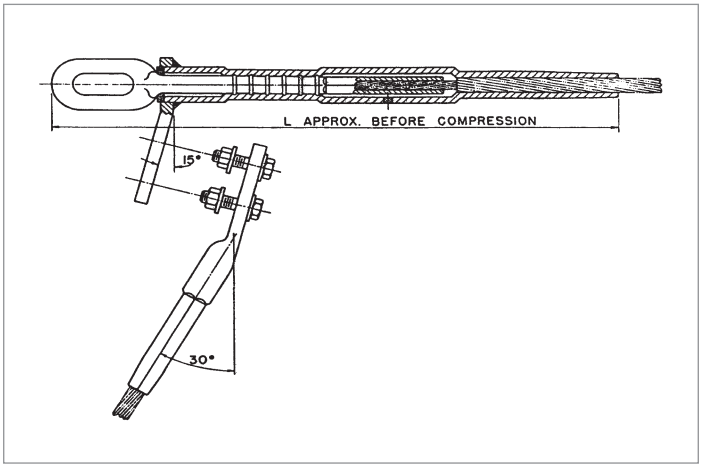
Compression Dead Ends—33100 Series for Extra High Strength ACSR Conductor, Eye Type, Single Tongue



The 33100 Series Dead End Assembly is designed for Extra High Strength ACSR conductors (see page 19 for standard ACSR accessories). The aluminum body of the dead end is fabricated from AFL seamless drawn aluminum. The tongue and terminal pad are constructed with a 15° angle, which permits the terminal connector to be bolted in the straight or 30° position.

All dead ends are designed for full tension use, achieving a minimum of 95% of the ASTM rated strength of the conductor on which they are used. Each dead end assembly comes with a dead end body, steel eye, 15° terminal and aluminum hardware.

For die size sections 30AH and above, the end tapers of the compression portions of all compression accessories are supplied with a high voltage finish. Corona bolts are furnished as standard on 15° terminals for these section sizes.

The square edges of bolted pads on compression accessories could cause Corona in environments greater than or equal to 345 kV. Pads with edges and corners rounded can be supplied by adding the catalog suffix "EHV".

Ordering Instructions

Step 1: Assembly Catalog Number
Determine the assembly catalog number based on the conductor being used.

Step 2: Terminal Connector
For an assembly without a terminal connector, use 'NT'.
For an assembly with a terminal connector, leave blank.

Step 3: Extra High Voltage Finish
For Extra High Voltage Finish, use 'EHV'.
For Standard Finish, leave blank.

Step 4: Assemble Catalog Number.

Assy Catalog Number	+	Terminal Connector	+	EHV Finish

Example:
For 203.2 Brahma conductor with no terminal, the complete catalog number is:

E33193NT

Notes:
1. Eye Dimensions are on page 119.
2. Pad Dimensions are on page 117.
3. AFL Filler Compound (AFC) Requirements are on page 115.
4. Installation Instructions for Terminals are on page 134.

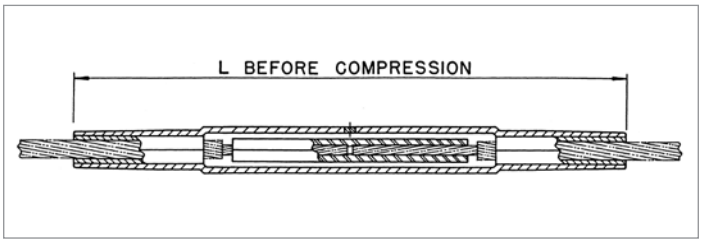
Compression Joints—43000 Series for Extra High Strength ACSR Conductors



The 43000 Series Compression Joint Assembly is specifically designed for Extra High Strength ACSR conductors (see page 56 for standard ACSR Compression Joints). The joint is fabricated from AFL seamless drawn aluminum.

All compression joints are designed for full tension use, achieving a minimum of 95% of the ASTM rated strength of the conductor on which they are used. Each compression joint assembly comes with an aluminum joint and a steel sleeve.

For die size sections 30AH and above, the end tapers of the compression portions of all compression accessories are supplied with a high voltage finish.

Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Example:

For 203.2 Brahma Conductor, the complete catalog number is:

43008

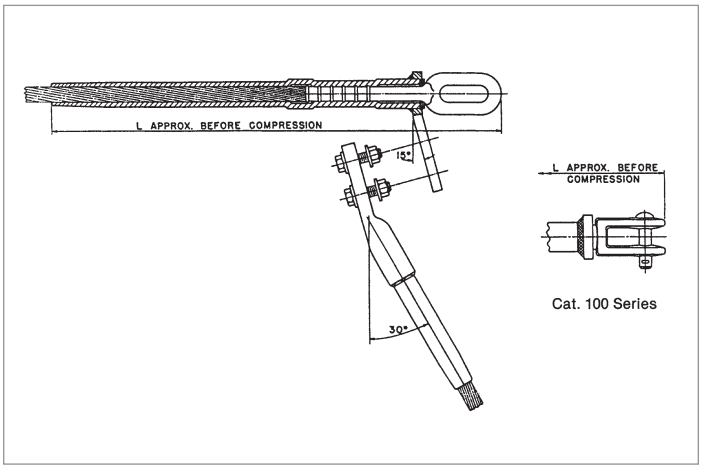
2. Installation Instructions for Joints are on page 141.

Compression Dead Ends—33500 Series for AAC Conductor, Eye or Clevis Type, Single Tongue



The 33500 Series Dead End Assembly is specifically designed for AAC conductors. The aluminum body of the dead end is fabricated from AFL seamless drawn aluminum. The tongue and terminal pad are constructed with a 15º angle, which permits the terminal connector to be bolted in the straight or 30º position.

All dead ends are designed for full tension use, achieving a minimum of 95% of the ASTM rated strength of the conductor on which they are used. Each dead end assembly comes with a dead end body, steel eye or clevis, 15º terminal and aluminum hardware.

For die size sections 30AH and above, the end tapers of the compression portions of all compression accessories are supplied with a high voltage finish. Corona bolts are furnished as standard on 15º terminals for these section sizes.

The square edges of bolted pads on compression accessories could cause Corona in environments greater than or equal to 345 kV. Pads with edges and corners rounded can be supplied by adding the catalog suffix "EHV".

Ordering Instructions

Step 1: Assembly Catalog Number
Determine the assembly catalog number based on the conductor being used.

Step 2: Terminal Connector
For an assembly without a terminal connector, use 'NT'.
For an assembly with a terminal connector, leave blank.

Step 3: Extra High Voltage Finish
For Extra High Voltage Finish, use 'EHV'.
For Standard Finish, leave blank.

Step 4: Assemble Catalog Number.

Assy Catalog Number + **Terminal Connector** + **EHV Finish**

Example:
For 795 Arbutus conductor with no terminal and EHV finish, the complete catalog number is:

E33516NTEHV

Notes:
1. Eye and Clevis Dimensions are on page 119.
2. Pad Dimensions are on page 117.
3. AFL Filler Compound (AFC) Requirements are on page 115.
4. Installation Instructions for Dead Ends are on page 133.
5. Installation Instructions for Terminals are on page 131.

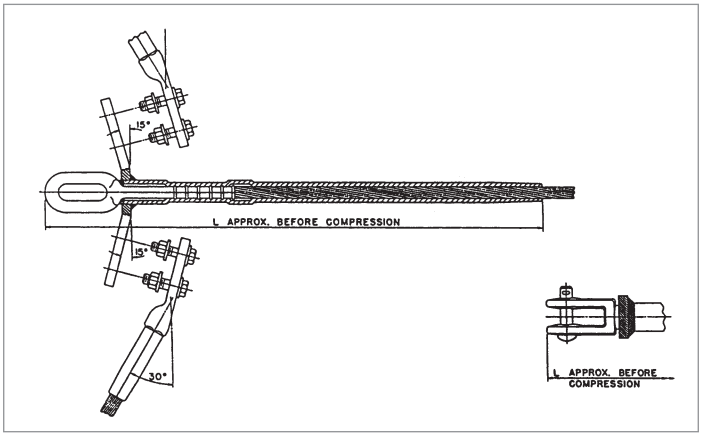
Compression Dead Ends—33600 Series for AAC Conductor, Eye or Clevis Type, Double Tongue



The 33600 Series Double Tongue Dead End Assembly is specifically designed for AAC conductors. The aluminum body of the dead end is fabricated from AFL seamless drawn aluminum. The tongue and terminal pad are constructed with a 15° angle, which permits the terminal connector to be bolted in the straight or 30° position.

All dead ends are designed for full tension use, achieving a minimum of 95% of the ASTM rated strength of the conductor on which they are used. Each dead end assembly comes with a dead end body, steel eye or clevis, two 15° terminals and aluminum hardware.

For die size sections 30AH and above, the end tapers of the compression portions of all compression accessories are supplied with a high voltage finish. Corona bolts are furnished as standard on 15° terminals for these section sizes.

The square edges of bolted pads on compression accessories could cause Corona in environments greater than or equal to 345 kV. Pads with edges and corners rounded can be supplied by adding the catalog suffix "EHV".

Ordering Instructions

Step 1: Assembly Catalog Number
Determine the assembly catalog number based on the conductor being used.

Step 2: Terminal Connector
For an assembly without a terminal connector, use 'NT'.
For an assembly with a terminal connector, leave blank.

Step 3: Extra High Voltage Finish
For Extra High Voltage Finish, use 'EHV'.
For Standard Finish, leave blank.

Step 4: Assemble Catalog Number.

Assy Catalog Number	+	Terminal Connector	+	EHV Finish

Example:
For 795 Arbutus conductor with no terminal and EHV finish, the complete catalog number is:

E33616NTEHV

Notes:
1. Eye and Clevis Dimensions are on page 119.
2. Pad Dimensions are on page 117.
3. AFL Filler Compound (AFC) Requirements are on page 115.
4. Installation Instructions for Dead Ends are on page 133.
5. Installation Instructions for Terminals are on page 131.

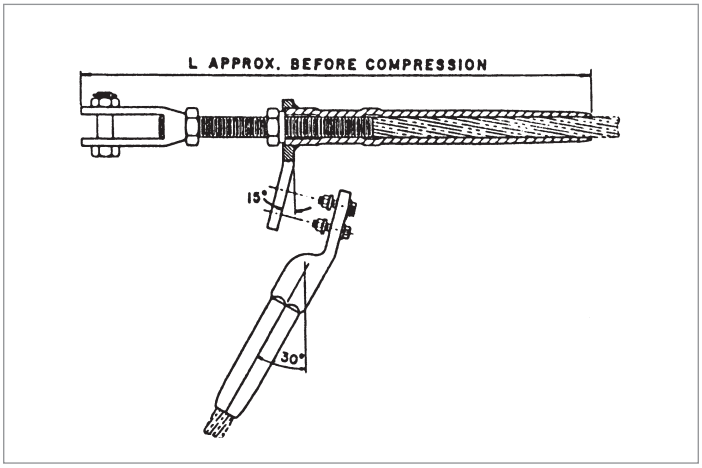
Compression Dead Ends—43200 Series for AAC Conductor, Adjustable Clevis Type, Single Tongue



The 43200 Series Adjustable Clevis Dead End Assembly is specifically designed for AAC conductors. The aluminum body of the dead end is fabricated from AFL seamless drawn aluminum. The tongue and terminal pad are constructed with a 15° angle, which permits the terminal connector to be bolted in the straight of 30° position.

All dead ends are designed for full tension use, achieving a minimum of 95% of the ASTM rated strength of the conductor on which they are used. Each dead end assembly comes with a dead end body, adjustable steel clevis, 15° terminal and aluminum hardware.

For die size sections 30AH and above, the end tapers of the compression portions of all compression accessories are supplied with a high voltage finish. Corona bolts are furnished as standard on 15° terminals for these section sizes.

The square edges of bolted pads on compression accessories could cause Corona in environments greater than or equal to 345 kV. Pads with edges and corners rounded can be supplied by adding the catalog suffix "EHV".

Ordering Instructions

Step 1: Assembly Catalog Number
Determine the assembly catalog number based on the conductor being used.

Step 2: Terminal Connector
For an assembly without a terminal connector, use 'NT'.
For an assembly with a terminal connector, leave blank.

Step 3: Extra High Voltage Finish
For Extra High Voltage Finish, use 'EHV'.
For Standard Finish, leave blank.

Step 4: Assemble Catalog Number.

Assy Catalog Number	+	Terminal Connector	+	EHV Finish

Example:
For 795 Arbutus conductor with no terminal and EHV finish, the complete catalog number is:

C43217NTEHV

Notes:
1. Adjustable Clevis Dimensions are on page 120.
2. Pad Dimensions are on page 117.
3. AFL Filler Compound (AFC) Requirements are on page 115.
4. Installation Instructions for Dead Ends are on page 133.
5. Installation Instructions for Terminals are on page 131.

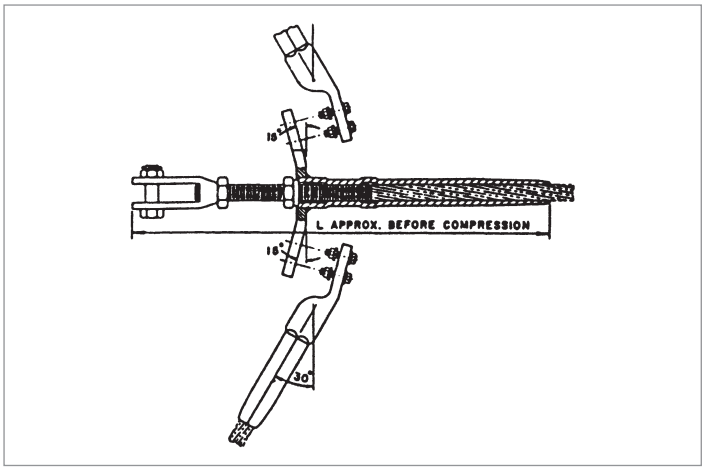
Compression Dead Ends—43300 Series for AAC Conductor, Adjustable Clevis Type, Double Tongue



The 43300 Series Adjustable Clevis Dead End Assembly is specifically designed for AAC conductors. The aluminum body of the dead end is fabricated from AFL seamless drawn aluminum. The tongue and terminal pad are constructed with a 15º angle, which permits the terminal connector to be bolted in the straight of 30º position.

All dead ends are designed for full tension use, achieving a minimum of 95% of the ASTM rated strength of the conductor on which they are used. Each dead end assembly comes with a dead end body, adjustable steel clevis, two 15º terminals and aluminum hardware.

For die size sections 30AH and above, the end tapers of the compression portions of all compression accessories are supplied with a high voltage finish. Corona bolts are furnished as standard on 15º terminals for these section sizes.

The square edges of bolted pads on compression accessories could cause Corona in environments greater than or equal to 345 kV. Pads with edges and corners rounded can be supplied by adding the catalog suffix "EHV".

Ordering Instructions

Step 1: Assembly Catalog Number
Determine the assembly catalog number based on the conductor being used.

Step 2: Terminal Connector
For an assembly without a terminal connector, use 'NT'.
For an assembly with a terminal connector, leave blank.

Step 3: Extra High Voltage Finish
For Extra High Voltage Finish, use 'EHV'.
For Standard Finish, leave blank.

Step 4: Assemble Catalog Number.

Assy Catalog Number	+	Terminal Connector	+	EHV Finish

Example:
For 795 Arbutus conductor with no terminal and EHV finish, the complete catalog number is:

C43317NTEHV

Notes:
1. Adjustable Clevis Dimensions are on page 120.
2. Pad Dimensions are on page 117.
3. AFL Filler Compound (AFC) Requirements are on page 115.
4. Installation Instructions for Dead Ends are on page 133.
5. Installation Instructions for Terminals are on page 131.

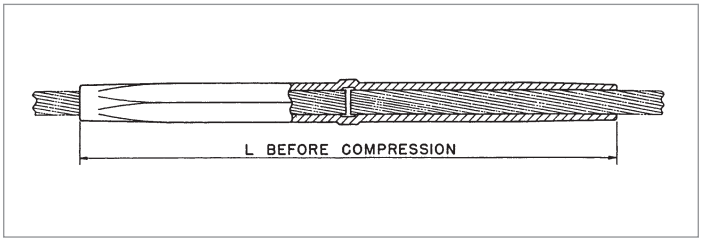
Compression Joints—7000 Series for AAC Conductors



The 7000 Series Compression Joint is specifically designed for AAC conductors. The aluminum joint is fabricated from AFL seamless drawn aluminum.

All compression joints are designed for full tension use, achieving a minimum of 95% of the ASTM rated strength of the conductor on which they are used.

For die size sections 30AH and above, the end tapers of the compression portions of all compression accessories are supplied with a high voltage finish.

Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Example:

For 795 Arbutus Conductor, the complete catalog number is:

7030.109

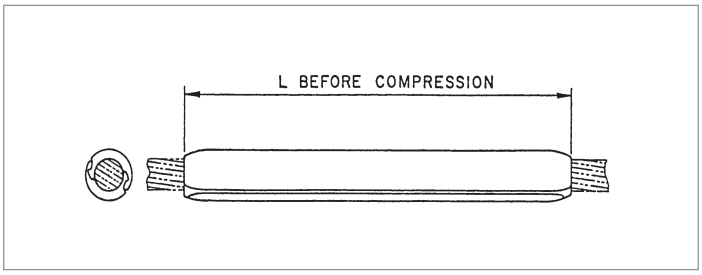
Repair Sleeves—5200 Series for AAC Conductors



The 5200 Series Repair Sleeve is designed for AAC conductors. The repair sleeve incorporates an improved design of interlocking extrusions, providing a permanent grip on the conductor when compressed.

The repair sleeve will restore 95% of the rated strength of the conductor with up to one-third of the aluminum strands damaged.

Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Example:

For 795 Arbutus conductor, the complete catalog number is:

5230.3

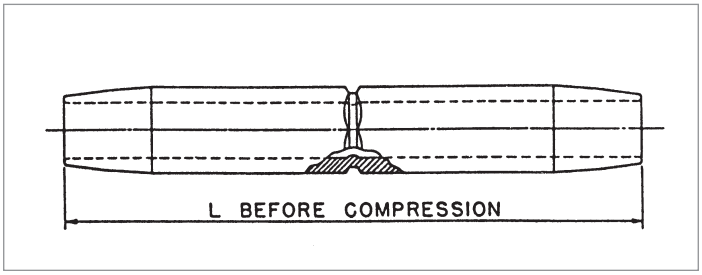
Jumper Connectors—5000 Series for AAC Conductors



The 5000 Series Jumper Connector is designed for AAC conductors. The jumper connector is fabricated from AFL seamless drawn aluminum. All jumper connectors are designed for limited tension use, maintaining a minimum of 40% of the ASTM rated strength of the conductor on which it is being used.

For die size sections 30AH and above, the end tapers of the compression portions of all compression accessories are supplied with a high voltage finish.

Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Example:

For 795 Arbutus conductor, the complete catalog number is:

5030.109

JUMPER CONNECTOR CATALOG NUMBER	CONDUCTOR				DIE SIZE	WEIGHT		DIMENSION L

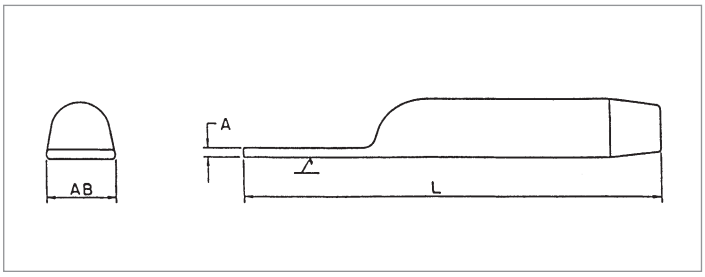
Terminal Connectors—5600 Series for AAC Conductors, Straight



The 5600 Series Straight Terminal Connector is designed for AAC conductors. The terminal connector is fabricated from AFL seamless drawn aluminum.

When used with the dead end, the straight terminal connector allows drop at a 15° angle. All terminal connectors are designed for limited tension use, maintaining a minimum of 40% of the ASTM rated strength of the conductor on which it is being used.

Ordering Instructions

Step 1: Assembly Catalog Number
Determine the assembly catalog number based on the conductor being used.

Step 2: Extra High Voltage Finish
For Extra High Voltage Finish, use 'EHV'.
For Standard Finish, leave blank.

Step 3: Assemble Catalog Number.

Assy Catalog Number + **EHV Finish**

Example:
For 795 Arbutus conductor with an EHV finish, the complete catalog number is:

5630.109EHV

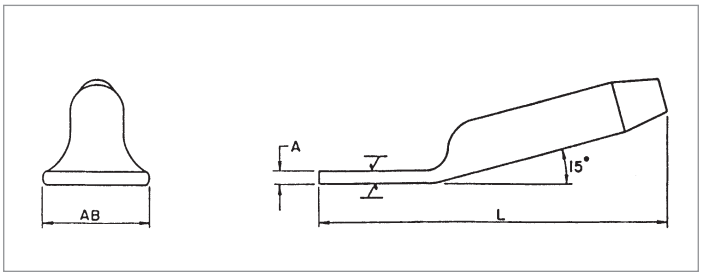
Terminal Connectors—5100 Series for AAC Conductors, 15°



The 5100 Series 15° Terminal Connector is designed for AAC conductors. The terminal connector is fabricated from AFL seamless drawn aluminum.

When used with the dead end, the 15° terminal connector can be bolted in either the straight or 30° position. All terminal connectors are designed for limited tension use, maintaining a minimum of 40% of the ASTM rated strength of the conductor on which it is being used. Aluminum hardware is supplied with the 15° terminal connector.

Ordering Instructions

Step 1: Assembly Catalog Number
Determine the assembly catalog number based on the conductor being used.

Step 2: Extra High Voltage Finish
For Extra High Voltage Finish, use 'EHV'.
For Standard Finish, leave blank.

Step 3: Assemble Catalog Number.

Assy Catalog Number	+	EHV Finish

Example:
For 795 Arbutus conductor with an EHV finish, the complete catalog number is:

5130.109EHV

Notes:
1. Pad Dimensions are on page 117.
2. AFL Filler Compound (AFC) Requirements are on page 115.
3. Installation Instructions for Terminals are on page 131.
4. Supplied with aluminum hardware.

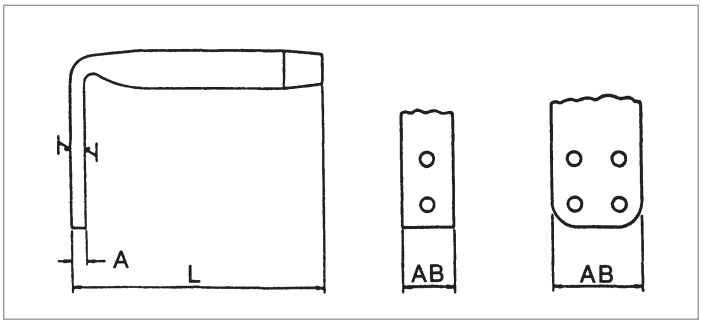
Terminal Connectors—5800 Series for AAC Conductors, 90°



The 5800 Series 90° Terminal Connector is designed for AAC conductors. The terminal connector is fabricated from AFL seamless drawn aluminum.

All terminal connectors are designed for limited tension use, maintaining a minimum of 40% of the ASTM rated strength of the conductor on which it is being used.

Ordering Instructions

Step 1: Assembly Catalog Number
Determine the assembly catalog number based on the conductor being used.

Step 2: Extra High Voltage Finish
For Extra High Voltage Finish, use 'EHV'.
For Standard Finish, leave blank.

Step 3: Assemble Catalog Number.

Assy Catalog Number + **EHV Finish**

Example:
For 795 Arbutus conductor with an EHV finish, the complete catalog number is:

5830.109EHV

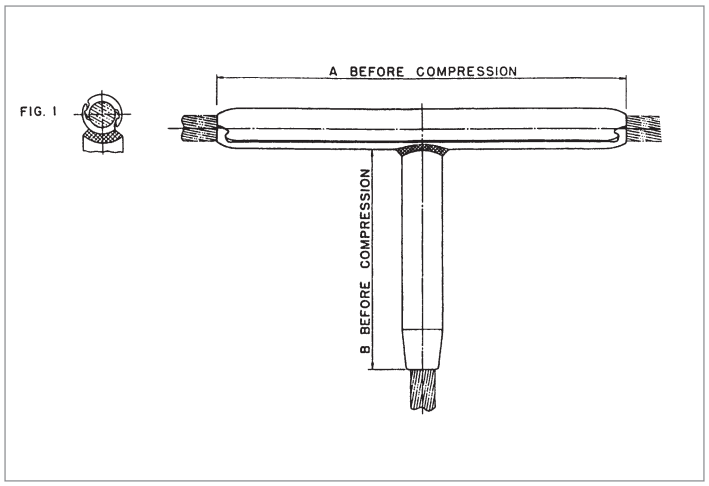
Tee Connector—5500 Series for AAC Conductors, Open Run



The 5500 Series Tee Connector is a permanent drop designed for AAC conductors. The tee connector is fabricated from AFL seamless drawn aluminum.

The run portion incorporates an improved design of interlocking extrusions, providing a permanent grip on the conductor when compressed.

The branch portion of the tee connector is designed for limited tension use, maintaining a minimum of 40% of the ASTM rated strength of the conductor on which it is being used.

For die size sections 30AH and above, the end tapers of the compression portions of all compression accessories are supplied with a high voltage finish.

Ordering Instructions

Step 1: Determine Run Catalog Number
Determine the run catalog number based on the conductor being used.

Step 2: Determine Branch Catalog Number
Determine the branch catalog number based on the conductor being used.

Step 3: Assemble Catalog Number

Run Catalog Number	+	Branch Catalog Number

Example:
For 795 Arbutus conductor in both the Run and Branch, the complete catalog number is:

5530.3 – 30.109

Notes:
1. AFL Filler Compound (AFC) Requirements are on page 115.
2. Installation Instructions for Open Run Tee Connectors are on page 145.

Tee Connector—5500 Series for AAC Conductors, Open Run (cont.)

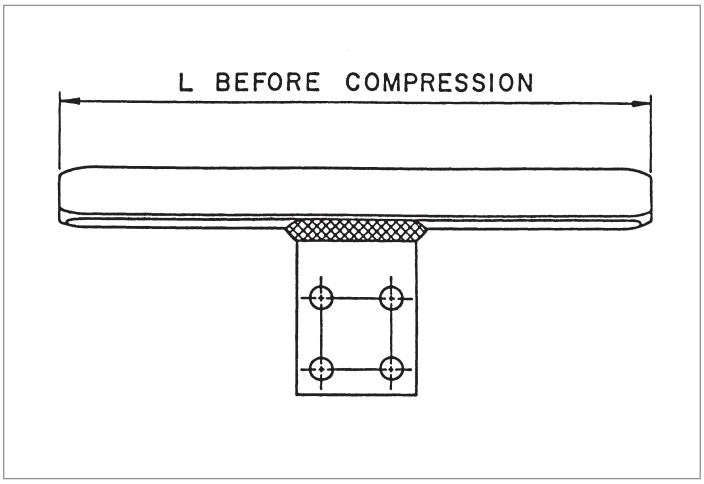
Tee Tap—5300 Series for AAC Conductors, Open Run



The 5300 Series Tee Tap is a permanent or temporary drop designed for AAC conductors. It is fabricated from AFL seamless drawn aluminum.

The run portion incorporates an improved design of interlocking extrusions, providing a permanent grip on the conductor when compressed.

For die size sections 30AH and above, the end tapers of the compression portions of all compression accessories are supplied with a high voltage finish.

Ordering Instructions

Step 1: Catalog Number
Determine the catalog number based on the conductor being used.

Step 2: Extra High Voltage Finish
For Extra High Voltage Finish, use 'EHV'.
For Standard Finish, leave blank.

Step 3: Assemble Catalog Number.

Catalog Number	+	EHV Finish

Example:
For 795 Arbutus conductor with EHV finish, the complete catalog number is:

5330.3EHV

Notes:
1. Pad Dimensions are on page 117.
2. AFL Filler Compound (AFC) Requirements are on page 115.
3. Bolt sizes and torque recommendations are on page 119.
4. Installation Instructions for Open Run Tee Taps are on page 144.

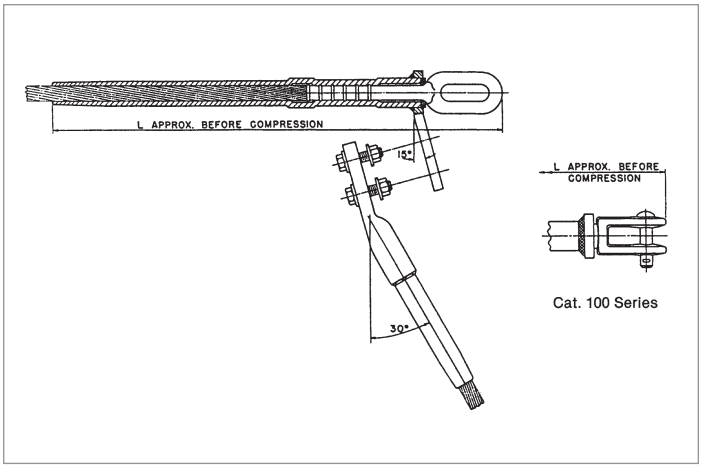
Compression Dead Ends—33700 Series for AAAC and ACAR Conductors, Eye Type, Single Tongue



The 33700 Series Dead End Assembly is specifically designed for AAAC and ACAR conductors. The aluminum body of the dead end is fabricated from AFL seamless drawn aluminum. The tongue and terminal pad are constructed with a 15° angle, which permits the terminal connector to be bolted in the straight or 30° position.

All dead ends are designed for full tension use, achieving a minimum of 95% of the ASTM rated strength of the conductor on which they are used. Each dead end assembly comes with a dead end body, steel eye, 15° terminal and aluminum hardware.

For die size sections 30AH and above, the end tapers of the compression portions of all compression accessories are supplied with a high voltage finish. Corona bolts are furnished as standard on 15° terminals for these section sizes.

The square edges of bolted pads on compression accessories could cause Corona in environments greater than or equal to 345 kV. Pads with edges and corners rounded can be supplied by adding the catalog suffix "EHV".

Ordering Instructions

Step 1: Assembly Catalog Number
Determine the assembly catalog number based on the conductor being used.

Step 2: Terminal Connector
For an assembly without a terminal connector, use 'NT'.
For an assembly with a terminal connector, leave blank.

Step 3: Extra High Voltage Finish
For Extra High Voltage Finish, use 'EHV'.
For Standard Finish, leave blank.

Step 4: Assemble Catalog Number.

Assy Catalog Number	+	Terminal Connector	+	EHV Finish

Example:
For 927.2 Greeley conductor with no terminal, the complete catalog number is:

E33714NT

Notes:
1. Eye Dimensions are on page 119.
2. Pad Dimensions are on page 117.
3. AFL Filler Compound (AFC) Requirements are on page 115.
4. Installation Instructions for Dead Ends are on page 133.
5. Installation Instructions for Terminals are on page 131.

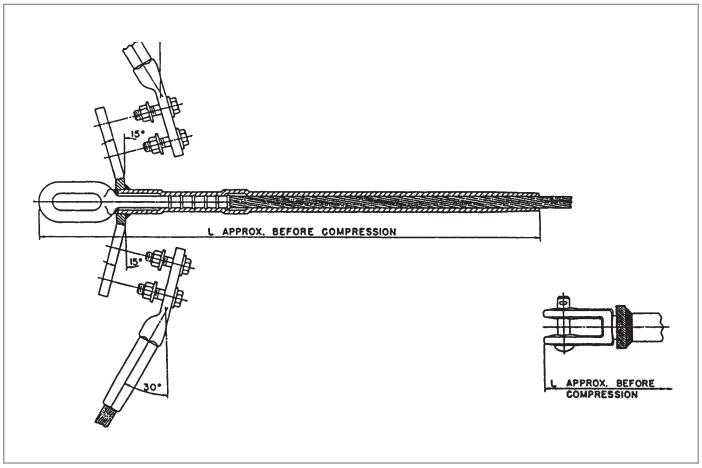
Compression Dead Ends—43100 Series for AAAC and ACAR Conductors, Eye Type, Double Tongue



The 43100 Series Double Tongue Dead End Assembly is specifically designed for AAAC and ACAR conductors. The aluminum body of the dead end is fabricated from AFL seamless drawn aluminum. The tongue and terminal pad are constructed with a 15° angle, which permits the terminal connector to be bolted in the straight or 30° position.

All dead ends are designed for full tension use, achieving a minimum of 95% of the ASTM rated strength of the conductor on which they are used. Each dead end assembly comes with a dead end body, steel eye, two 15° terminals and aluminum hardware.

For die size sections 30AH and above, the end tapers of the compression portions of all compression accessories are supplied with a high voltage finish. Corona bolts are furnished as standard on 15° terminals for these section sizes.

The square edges of bolted pads on compression accessories could cause Corona in environments greater than or equal to 345 kV. Pads with edges and corners rounded can be supplied by adding the catalog suffix "EHV".

Ordering Instructions

Step 1: Assembly Catalog Number
Determine the assembly catalog number based on the conductor being used.

Step 2: Terminal Connector
For an assembly without a terminal connector, use 'NT'.
For an assembly with a terminal connector, leave blank.

Step 3: Extra High Voltage Finish
For Extra High Voltage Finish, use 'EHV'.
For Standard Finish, leave blank.

Step 4: Assemble Catalog Number.

Assy Catalog Number	+	Terminal Connector	+	EHV Finish

Example:
For 927.2 Greeley conductor with no terminal, the complete catalog number is:

E43114NT

Notes:
1. Eye Dimensions are on page 119.
2. Pad Dimensions are on page 117.
3. AFL Filler Compound (AFC) Requirements are on page 115.
4. Installation Instructions for Dead Ends are on page 133.
5. Installation Instructions for Terminals are on page 131.

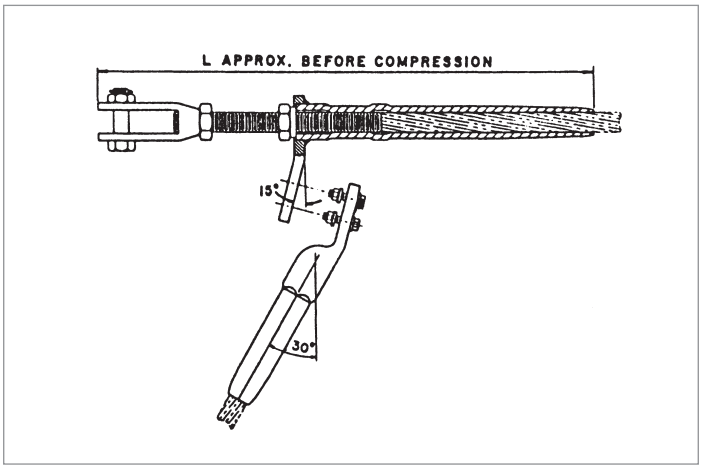
Compression Dead Ends—43400 Series for AAAC and ACAR Conductors, Adjustable Clevis Type, Single Tongue



The 43400 Series Adjustable Clevis Dead End Assembly is specifically designed for AAAC and ACAR conductors. The aluminum body of the dead end is fabricated from AFL seamless drawn aluminum. The tongue and terminal pad are constructed with a 15° angle, which permits the terminal connector to be bolted in the straight of 30° position.

All dead ends are designed for full tension use, achieving a minimum of 95% of the ASTM rated strength of the conductor on which they are used. Each dead end assembly comes with a dead end body, adjustable steel clevis, 15° terminal and aluminum hardware.

For die size sections 30AH and above, the end tapers of the compression portions of all compression accessories are supplied with a high voltage finish. Corona bolts are furnished as standard on 15° terminals for these section sizes.

The square edges of bolted pads on compression accessories could cause Corona in environments greater than or equal to 345 kV. Pads with edges and corners rounded can be supplied by adding the catalog suffix "EHV".

Ordering Instructions

Step 1: Assembly Catalog Number
Determine the assembly catalog number based on the conductor being used.

Step 2: Terminal Connector
For an assembly without a terminal connector, use 'NT'.
For an assembly with a terminal connector, leave blank.

Step 3: Extra High Voltage Finish
For Extra High Voltage Finish, use 'EHV'.
For Standard Finish, leave blank.

Step 4: Assemble Catalog Number.

Assy Catalog Number	+	Terminal Connector	+	EHV Finish

Example:
For 394.5 Canton conductor with no terminal, the complete catalog number is:

C43408NT

Notes:
1. Adjustable Clevis Dimensions are on page 120.
2. Pad Dimensions are on page 117.
3. AFL Filler Compound (AFC) Requirements are on page 115.
4. Installation Instructions for Dead Ends are on page 133.
5. Installation Instructions for Terminals are on page 131.

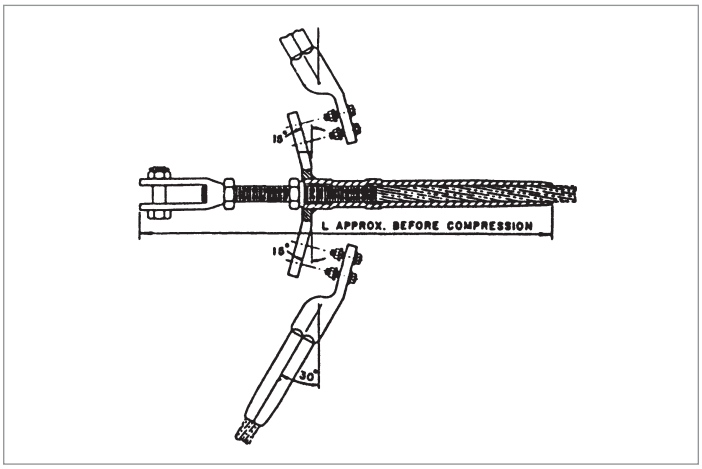
Compression Dead Ends—43500 Series for AAAC and ACAR Conductors, Adjustable Clevis Type, Double Tongue



The 43500 Series Adjustable Clevis Dead End assembly is specifically designed for AAAC and ACAR conductors. The aluminum body of the dead end is fabricated from AFL seamless drawn aluminum. The tongue and terminal pad are constructed with a 15° angle, which permits the terminal connector to be bolted in the straight of 30° position.

All dead ends are designed for full tension use, achieving a minimum of 95% of the ASTM rated strength of the conductor on which they are used. Each dead end assembly comes with a dead end body, adjustable steel clevis, two 15° terminals and aluminum hardware.

For die size sections 30AH and above, the end tapers of the compression portions of all compression accessories are supplied with a high voltage finish. Corona bolts are furnished as standard on 15° terminals for these section sizes.

The square edges of bolted pads on compression accessories could cause Corona in environments greater than or equal to 345 kV. Pads with edges and corners rounded can be supplied by adding the catalog suffix "EHV".

Ordering Instructions

Step 1: Assembly Catalog Number
Determine the assembly catalog number based on the conductor being used.

Step 2: Terminal Connector
For an assembly without a terminal connector, use 'NT'.
For an assembly with a terminal connector, leave blank.

Step 3: Extra High Voltage Finish
For Extra High Voltage Finish, use 'EHV'.
For Standard Finish, leave blank.

Step 4: Assemble Catalog Number.

Assy Catalog Number	+	Terminal Connector	+	EHV Finish

Example:
For 652.4 Elgin conductor with no terminal and EHV finish, the complete catalog number is:

C43513NTEHV

Notes:
1. Adjustable Clevis Dimensions are on page 120.
2. Pad Dimensions are on page 117.
3. AFL Filler Compound (AFC) Requirements are on page 115.
4. Installation Instructions for Dead Ends are on page 133.
5. Installation Instructions for Terminals are on page 131.

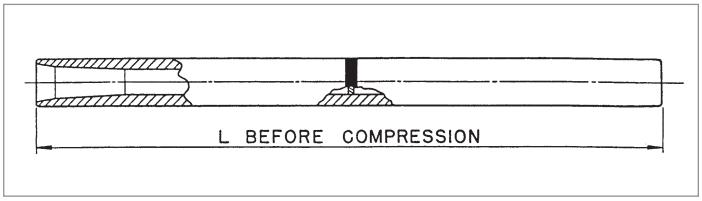
Compression Joints – Jiffy Joints—7500 Series for AAAC and ACAR Conductors



The 7500 Series Compression Joint (Jiffy Joint) is designed for AAAC and ACAR conductors. The aluminum body is fabricated from AFL seamless drawn aluminum. The compression joint is a single piece unit without a steel sleeve and comes prefilled with AFL Filler Compound (AFC).

All compression joints are designed for full tension use, achieving a minimum of 95% of the ASTM rated strength of the conductor on which they are used.

For die size sections 30AH and above, the end tapers of the compression portions of all compression accessories are supplied with a high voltage finish.

Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Example:

For 312.8 Butte conductor, the complete catalog number is:

7514.719

JOINT CATALOG NUMBER	CONDUCTOR			DIE SIZE	WEIGHT		COLOR CODE	DIMENSION L

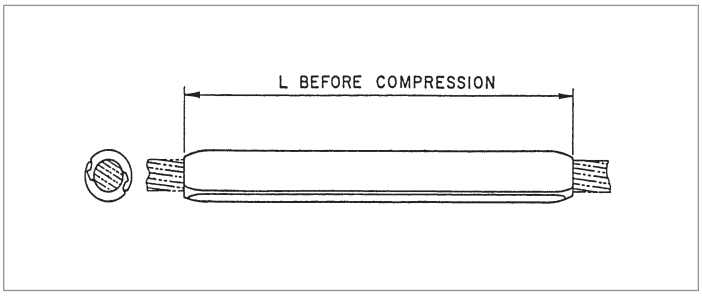
Notes:

1. Joint are prefilled at factory.
2. Installation Instructions for Joints are on page 139.

Repair Sleeves—5200 Series for AAAC and ACAR Conductors



The 5200 Series Repair Sleeve is designed for AAAC and ACAR conductors. The repair sleeve incorporates an improved design of interlocking extrusions, providing a permanent grip on the conductor when compressed.

The repair sleeve will restore 95% of the rated strength of the conductor with up to one-third of the aluminum strands damaged.

Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Example:

For 652.4 Elgin conductor, the complete catalog number is:

5224.3

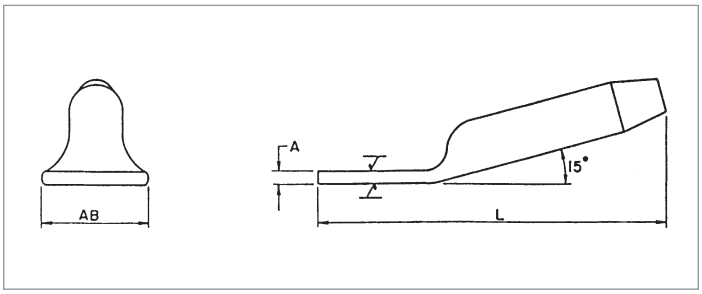
Terminal Connectors—5100 Series for AAAC and ACAR Conductors, 15°



The 5100 Series 15° Terminal Connector is designed for AAAC and ACAR conductors. The terminal connector is fabricated from AFL seamless drawn aluminum.

When used with the dead end, the 15° terminal connector can be bolted in either the straight or 30° position. All terminal connectors are designed for limited tension use, maintaining a minimum of 40% of the ASTM rated strength of the conductor on which it is being used. Aluminum hardware is supplied with the 15° terminal connector.

Ordering Instructions

Step 1: Assembly Catalog Number
Determine the assembly catalog number based on the conductor being used.

Step 2: Extra High Voltage Finish
For Extra High Voltage Finish, use 'EHV'.
For Standard Finish, leave blank.

Step 3: Assemble Catalog Number.

Assy Catalog Number + **EHV Finish**

Example:
For 927.2 Greeley conductor with an EHV finish, the complete catalog number is:

5134.122EHV

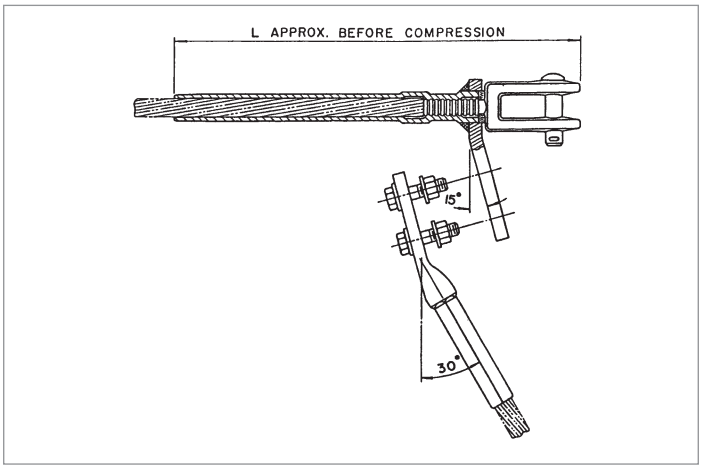
Compression Dead Ends—33200 Series for AWAC Conductor, Clevis Type, Single Tongue



The 33200 Series Dead End Assembly is specifically designed for AWAC conductors. The aluminum body of the dead end is fabricated from AFL seamless drawn aluminum. The tongue and terminal pad are constructed with a 15º angle, which permits the terminal connector to be bolted in the straight or 30º position.

All dead ends are designed for full tension use, achieving a minimum of 95% of the ASTM rated strength of the conductor on which they are used. Each dead end assembly comes with a dead end body, steel clevis, 15º terminal and aluminum hardware.

For die size sections 30AH and above, the end tapers of the compression portions of all compression accessories are supplied with a high voltage finish. Corona bolts are furnished as standard on 15º terminals for these section sizes.

The square edges of bolted pads on compression accessories could cause Corona in environments greater than or equal to 345 kV. Pads with edges and corners rounded can be supplied by adding the catalog suffix "EHV".

Ordering Instructions

Step 1: Assembly Catalog Number
Determine the assembly catalog number based on the conductor being used.

Step 2: Terminal Connector
For an assembly without a terminal connector, use 'NT'.
For an assembly with a terminal connector, leave blank.

Step 3: Extra High Voltage Finish
For Extra High Voltage Finish, use 'EHV'.
For Standard Finish, leave blank.

Step 4: Assemble Catalog Number.

Assy Catalog Number + **Terminal Connector** + **EHV Finish**

Example:
For 1/0 6/1 conductor with no terminal, the complete catalog number is:

C33210NT

Notes:
1. Clevis Dimensions are on page 120.
2. Pad Dimensions are on page 117.
3. AFL Filler Compound (AFC) Requirements are on page 115.
4. Installation Instructions for Dead Ends are on page 133.
5. Installation Instructions for Terminals are on page 131.

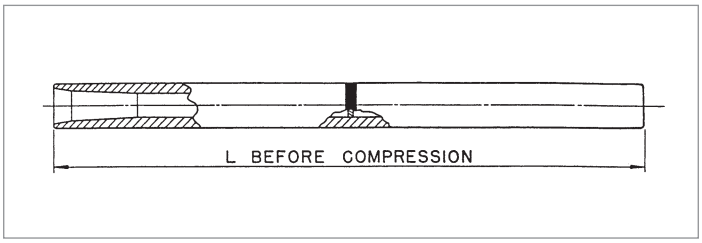
Compression Joints—7500 and 8500 Series for AWAC Conductors



The 7500 and 8500 Series Compression Joints are specifically designed for AWAC conductors. The aluminum joint is fabricated from AFL seamless drawn aluminum.

All compression joints are designed for full tension use, achieving a minimum of 95% of the ASTM rated strength of the conductor on which they are used.

For die size sections 30AH and above, the end tapers of the compression portions of all compression accessories are supplied with a high voltage finish.

Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Example:

For 336.4 18/1 AWAC, the complete catalog number is:

8576.719

Ordering Instructions

Select the catalog number based on the conductor being used. Terminals are to ordered separately.

Options

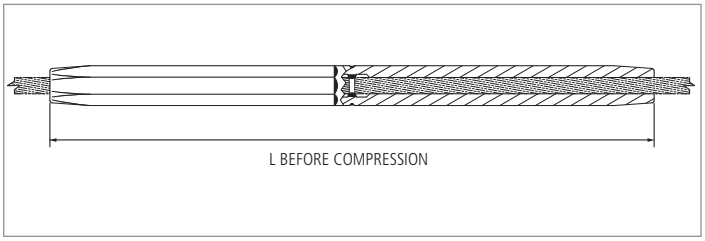
To order a Dead End with a single tongue, put a "T" at the end of the catalog number. **EXAMPLE: E4516.77T**

To order a Dead End with a bolted jumper, put a "J" at the end of the catalog number. **EXAMPLE: E4516.77J**

Notes:

1. Eye and Clevis Dimensions are on page 119.
2. Pad Dimensions are on page 117.
3. AFL Filler Compound (AFC) Requirements are on page 115.
4. Installation Instructions for Dead Ends are on page 134.
5. Installation Instructions for Terminals are on page 131.
6. The 4500-T Series Dead Ends are supplied with a "B" pad size.

Compression Joints—4900 Series for Alumoweld® and Steel Ground Wire



The 4900 Series Compression Joint is specifically designed for Alumoweld and steel ground wires. The aluminum joint is fabricated from AFL seamless drawn aluminum. The 4900 series compression joint consists of only an aluminum sleeve and has no steel sleeve.

The 4900 Series compression joints are designed for full tension use, achieving a minimum of 95% of the ASTM rated breaking strength of the conductor on which they are used.

Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Example:

For 7 No. 7 Alumoweld, the complete catalog number is:

4916.484

Alumoweld Strand:

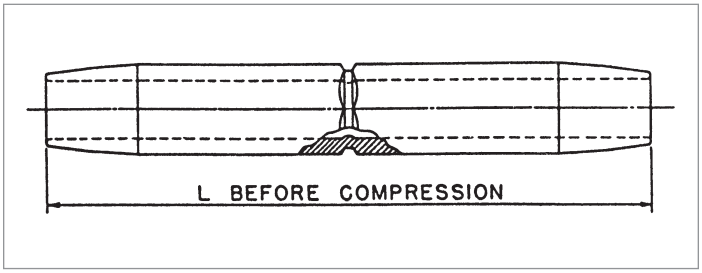
Jumper Connectors—5000 Series for Alumoweld® and Steel Ground Wire



Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Example:

For 7 No. 7 Alumoweld, the complete catalog number is:

5074.484

The 5000 Series Jumper Connector is designed for Alumoweld® and steel ground wire. The jumper connector is fabricated from AFL seamless drawn aluminum. All jumper connectors are designed for limited tension use, maintaining a minimum of 40% of the ASTM rated strength of the conductor on which it is being used.

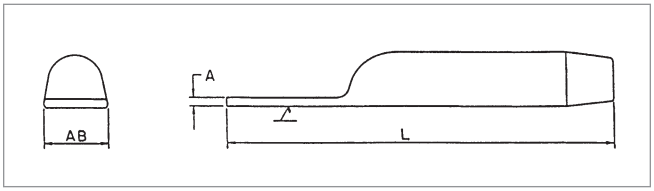
2. Installation Instructions for Jumper Connectors are on page 143.

Terminal Connectors—5600 Series for Alumoweld® and Steel Ground Wire, Straight



The 5600 Series Straight Terminal Connector is designed for Alumoweld and steel ground wire. The terminal connector is fabricated from AFL seamless drawn aluminum.

When used with the dead end, the straight terminal connector allows drop at a 15° angle. All terminal connectors are designed for limited tension use, maintaining a minimum of 40% of the ASTM rated strength of the conductor on which it is being used.

Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Example:

For 7 No. 7 Alumoweld, the complete catalog number is:

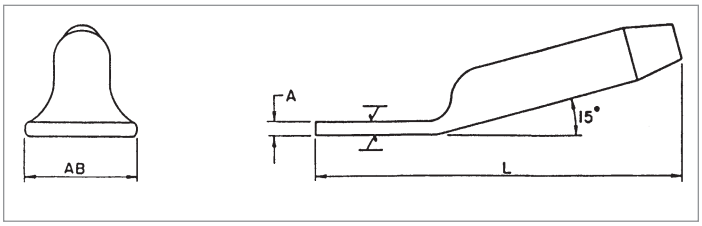
3. Installation Instructions for Terminals are on page 131.
4. Bolts, nuts and washers are not supplied with the straight terminal connector.

Terminal Connectors—5100 Series for Alumoweld® and Steel Ground Wire, 15°



The 5100 Series Straight Terminal Connector is designed for Alumoweld and steel ground wire. The terminal connector is fabricated from AFL seamless drawn aluminum.

When used with the dead end, the 15° terminal connector can be bolted in either the straight or 30° position. All terminal connectors are designed for limited tension use, maintaining a minimum of 40% of the ASTM rated strength of the conductor on which it is being used. Aluminum hardware is supplied with the 15° terminal connector.

Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Example:

For 7 No. 7 Alumoweld, the complete catalog number is:

Notes:
The amount of AFC shown in the tabulation is for the purpose of estimating the amount of compound necessary for a construction project. The tabulated weights of filler compound shown in the above tables for the Catalog 5100, 5600, and 5800 terminals does not include sufficient quantity to fill the cavity area at the transition of the barrel and flat pad. If the terminal is installed with the barrel in the upright position, it is imperative that anadditional quantity of AFC be used to fill the cavity area.

Note:
Conductor temperature at 75°, ambient temperature 25°C, emissivity 0.5, wind 2 ft/sec, in sun.

Installation Instructions

Standard Compression Dead End for ACSR and ACSS Conductor

CAUTION: ACSR Dead Ends Cannot Be Used on ACSS HT Conductor

1. Mark the conductor a distance of 3/4 the length of the aluminum body (***Figure 1***).
2. Prior to making connection, the outer strands of the conductor must be cleaned with a wire brush or abrasive cloth (***Figure 2***).
3. Prior to any strand cutting, tape the end of the conductor to help maintain the round contour.
4. Slide the aluminum dead end body over conductor until sufficient working length protrudes from tongue end. (***Figure 3***).
5. Cut back aluminum strands equal to the depth of the steel forging barrel plus 1 inch (25.4 mm). Do not nick the steel strands. File burrs, if present. (***Figure 4***). Use of a cable trimming tool is recommended. (***Figure 4a, 4b***).
6. Insert steel core into steel barrel to full length of bore. (***Figure 5***).
7. Using the proper SH die set, compress steel barrel full length making initial compression adjacent to rib closest to barrel. Overlap each successive compression by at least ¼ inch (6.4 mm). Complete die closure is required on all compressions.(***Figure 5a, 5b***).
8. Slide the aluminum body over the steel forging until the tongue end butts solidly against felt washer and shoulder of steel eye. Align eye with tongue to desired orientation for attachment to insulator string. (***Figure 6***).

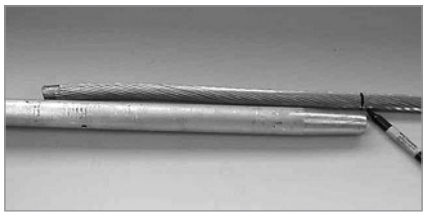

FIGURE 1: Mark the conductor and clean 3/4 the length of the aluminum body.

FIGURE 2: Clean a distance of at least ¾ the distance of the aluminum dead end body.

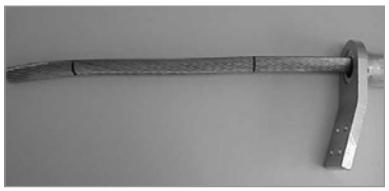

FIGURE 3: Slide aluminum dead end body over conductor.

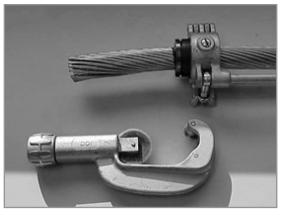

FIGURE 4a:

FIGURE 4b:

FIGURE 5:

FIGURE 5a:

FIGURE 5b:

FIGURE 6:

Installation Instructions (cont.)

Standard Compression Dead End for ACSR and ACSS Conductor

9. Inject filler compound (AFC or AFCHT for HiTemp®) into filler hole until compound emerges at felt washer and tapered end of aluminum body. (***Figure 6a***).

10. Insert and drive filler plug (cavity up) into hole and peen edge of hole over top surface of plug. (***Figure 7***). Leaving the filler plug in the small plastic bag makes it easier to insert when working with gloves. (***Figure 7a***).

11. Using the proper AH die set, make the initial compression on the aluminum body beginning at the "start" mark nearest the tongue. Overlap each successive compression by at least ¼ inch (6.4 mm). Press only to the "stop" mark. Complete die closure is required for each compression. (***Figure 8***).

Note: A light oil coating on the die grooves and aluminum sleeve is recommended.

12. To press the dead end body over the conductor, use the same die used in step 11. Begin compressing at the "start" mark about centrally located. Overlap each successive compression by at least ¼ inch (6.4 mm). Press to the end of the body, including the tapered portion. Complete die closure is required on each compression. (***Figure 9***).

During this compression sequence, the plastic bag in which the dead end assembly was received can be used as a medium between the aluminum body and dies (instead of oil as mentioned in step 11).

13. Compressed portion of dead end body should have a smooth uniform appearance. (***Figure 10***). If die flash is present, remove with a file or emery cloth.

14. Remove any excess filler compound which may have been forced out the end of the dead end body.

FIGURE 7a:

FIGURE 8:

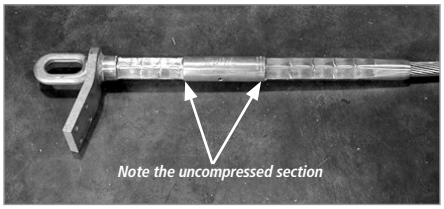

FIGURE 9:

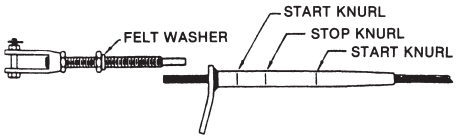
FIGURE 10:

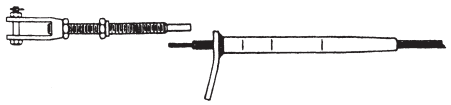
Installation Instructions

Adjustable Compression Dead Ends on ACSR Conductors

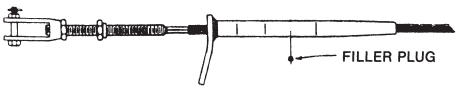
1. Prior to making connections, the outer strand on all conductors (even new conductors) must be cleaned with a wire brush or abrasive cloth. If the conductor is weathered or blackened, carefully unlay aluminum strands for a distance equal to or greater than 3/4 the length of the aluminum dead end body and clean strands thoroughly with wire brush or abrasive cloth. Check accessory bore for foreign particles, removing if present.
2. Serve the conductor, prior to cutting, with tape to help maintain the round contour making it easier to slide the end through the aluminum dead end.
3. Straighten several feet of conductor removing set caused by reel (if necessary).
4. If a comealong is being used, it should be located at least ten (10) feet from end of conductor.



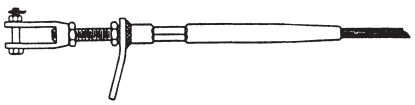
5. Slide dead end body over conductor until sufficient working length protrudes from tongue end.
6. Cut back aluminum stands a distance equal to the depth of the bore of the steel forging barrel plus 1 inch. Do not nick steel strands. File burrs as necessary for ease of insertion.



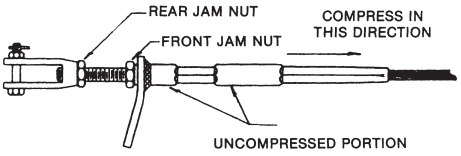
7. Insert steel core into steel barrel to full length of bore.
8. Select die size for compressing steel barrel. The die size on the die and die size marked on steel barrel must be the same.
9. Compress steel barrel full length making initial compression adjacent to corrugations. Overlap each successive compression by approximately 1/4 die bite. Complete die closure is required for each compression.



10. Remove any remaining tape from the aluminum strands and slide aluminum dead end body over steel forging until tongue end butts solidly against felt washer and shoulder of steel dead end. Align clevis or eye with tongue of dead end to ensure proper positioning when dead end is fastened to insulator hardware.
11. Inject AFL Filler Compound (AFC) into filler hole until compound emerges at the felt washer and the tapered end of the body. Insert and drive filler plug into hole and peen edge of hole over top surface of plug.
12. Select die size to compress aluminum dead end body. Die size for aluminum dead end body and die size marked on die must be the same.
13. It is recommended that die grooves be well lubricated with a light weight oil. Oil coating should be maintained during entire compression operation.
14. Make the initial compression on the dead end body over the steel shank beginning at the "start knurl" nearest the dead end tongue. Continue making compressions to the "stop knurl", overlapping the previous compression by approximately 1/4 die bite. Complete die closure is required for each compression.



15. To press the dead end body over the conductor, use the same die used in step 13. Make the initial compression at the "start knurl" and proceed with compression. Continue making compressions to the end of the dead end body, overlapping the previous compression by approximately 1/4 die bite. Complete die closure is required for each compression.
16. Note there should be an uncompressed area on the dead end body where it covers the compressed barrel of the steel forging (area of the filler plug).
17. Compressed portion of the dead end should have a smooth uniform appearance. Remove flash, if present, with file or emery cloth.



CAUTION: Follow installation instructions carefully. Improper installation can result in mechanical failure of the cable system and possible injury to persons handling or in the vicinity of the cable systems.

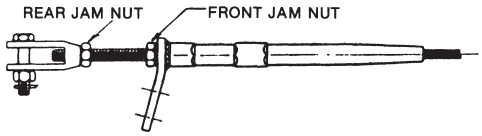
SAFETY: Consult your safety training department to ensure that the installation procedure adopted is in compliance with your company's standard procedure.

Installation Instructions

Clevis Adjustment of Adjustable Compression Dead Ends on ACSR Conductors

Standard Method

1. Loosen rear jam nut.
2. Rotate clevis for proper sag and tension.
3. Tighten rear jam nut.



CAUTION: Follow installation instructions carefully. Improper installation can result in mechanical failure of the cable system and possible injury to persons handling or in the vicinity of the cable systems.

SAFETY: Consult your safety training department to ensure that the installation procedure adopted is in compliance with your company's standard procedure.

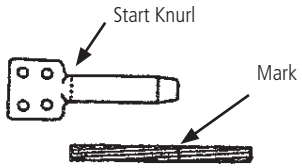
Installation Instructions

Standard Compression Terminals

(These instructions are not for HiTemp® Conductors)

1. Prior to making any connections, the conductor must be clean. For new conductor, the outside diameter shall be wire brushed to remove the aluminum oxidation. If the conductor is weathered or blackened, carefully unlay the aluminum strands for a distance equal to the compression length of the terminal. Clean all of the aluminum strands thoroughly with a wire brush.

2. Mark the conductor from the end, a distance equal to the compression length of the terminal.



Quick Compress:

3a. Insert the conductor into the terminal. Be sure the conductor is inserted to the mark on the conductor. The terminal comes pre-filled with compound from the factory.

Standard Compression:

3b. Inject sufficient AFL Filler Compound (AFC) in the end of the terminal bore and on the conductor to ensure that excess compound will be visible at terminal end when barrel is completely compressed. See chart below for proper amount of AFC required for each terminal size.

AFC Filler Compound Required

PARTIAL TERMINAL CATALOG NUMBER	LB.	GRAMS (G)
5172., 5672., 5872.	0.01	5
5173., 5673., 5873.	0.01	5

5142., 5642., 5842.	0.24	109
5144., 5644., 5844.	0.28	127
5148., 5648., 5848.	0.32	145

CAUTION: Follow installation instructions carefully. Improper installation can result in mechanical failure of the cable system and possible injury to persons handling or in the vicinity of the cable systems.

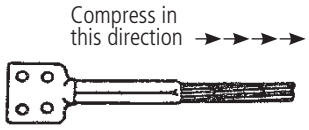
Installation Instructions (cont.)

Standard Compression Terminals

(These instructions are not for HiTemp® Conductors)

4. To compress, select the proper die size as stamped on the jumper connector.

5. Compress the terminal, beginning at the "start knurl." Continue compressing toward the end of the terminal. Complete die closure is required for each compression. Overlap the previous compression by approximately 1/4 die bite. It is recommended that die grooves be well lubricated with a lightweight oil. Oil coating should be maintained during entire compression operation. (Other acceptable mediums that can be used instead of oil are wax, soap or plastic bag the terminal was shipped in.)



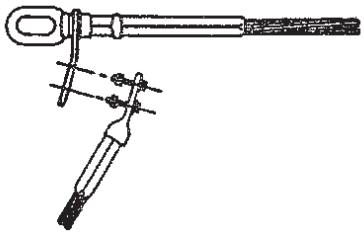
6. Remove flash, if any, with a file or an abrasive cloth.

To Attach Terminal Connector to Dead End or Tee Tap

7. Clean contact surface of pads to be connected by wire brushing thoroughly and immediately coating with a thin film of No. 2 Electrical Joint Compound (EJC). Do not use AFC.

8. Bolt terminal to dead end pad. Partially tighten all bolts and then re-tighten each bolt to the recommended torque:

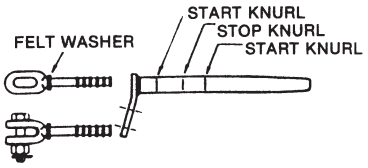
   Aluminum 1/2" bolts - 25 lb-ft (34 N.m)
   Stainless Steel 1/2" bolts - 40 lb-ft (54 N.m)



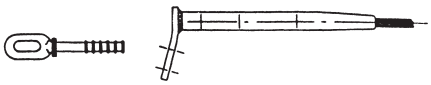
CAUTION: Follow installation instructions carefully. Improper installation can result in mechanical failure of the cable system and possible injury to persons handling or in the vicinity of the cable systems.

Installation Instructions

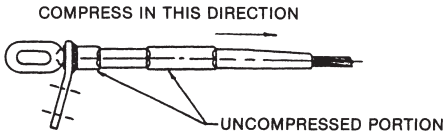
Adjustable and Non-Adjustable Compression Dead Ends on AAC, AAAC, ACAR and AWAC Conductors



1. Prior to making connections, the conductor must be wire brushed and accessory bore must be clean. If the conductor is weathered or blackened, carefully unlay aluminum strands for a distance equal to or greater than 1/4 the length of the aluminum dead end body and clean strands thoroughly with wire brush or abrasive cloth. Check accessory bore for foreign particles and remove if present.
2. Straighten several feet of conductor removing set caused by reel.



3. Coat the steel dead end shank with a liberal quantity of AFL Filler Compound (AFC).
4. Insert steel dead end shank into tongue end of aluminum body until the felt washer butts solidly against the front jam nut on the clevis rod of the adjustable clevis or shoulder of non-adjustable steel dead end.
5. For non-adjustable steel dead ends, align the steel eye or clevis with the tongue of the aluminum dead end body to ensure that the tongue will be in proper position when the dead end is fastened to insulator hardware.
6. Select die size to compress aluminum dead end body. Die size for aluminum dead end and die size marked on die must be the same.
7. It is recommended that die grooves be well lubricated with a light weight oil. Oil coating should be maintained during entire compression operation.
8. Make the initial compression on the dead end body over the steel shank beginning at the "start knurl" nearest the dead end tongue. Continue making compressions to the "stop knurl", overlapping the previous compression by approximately 1/4 die bite. Complete die closure is required for each compression.
9. Insert conductor full depth into dead end body and mark conductor at end of barrel. Remove conductor after marking.
10. Inject sufficient AFL Filler Compound (AFC) In the end of the dead end bore and on the conductor to ensure that excess compound will be visible at the end of the dead end body when the barrel, is completely compressed.
11. Insert clean end of the conductor into the dead end body to the mark on the conductor.
12. The dead end will bow during compression unless reasonable care is taken to have about 15 ft. (4.5 m) of the conductor supported straight out from the end of the dead end such that the weight of the conductor does not hang unsupported from the and of the dead end when compressing.
13. To press the dead end body over the conductor, use the same die used in step 8. Make the initial compression at the "start knurl" nearest the end of the dead end body. Continue making compressions to the end of the dead end body, overlapping the previous compression by approximately 1/4 die bite. Complete die closure is required for each compression.
14. Compressed portion of the dead end should have a smooth uniform appearance. Remove flash, if present, with file or emery cloth.



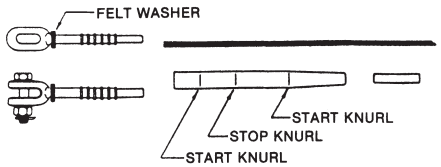
CAUTION: Follow installation instructions carefully. Improper installation can result in mechanical failure of the cable system and possible injury to persons handling or in the vicinity of the cable systems.

SAFETY: Consult your safety training department to ensure that the installation procedure adopted is in compliance with your company's standard procedure.

Installation Instructions

Compression Dead Ends on EHS ACSR, Alumoweld® and Steel Ground Wire

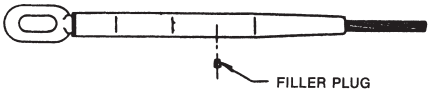
1. Serve the conductor, prior to cutting, to help maintain the round contour. File burrs or shape edges off the conductor as necessary for ease of insertion.
2. Straighten several feet of conductor removing set caused by reel.



3. Slide the aluminum filler sleeve over conductor.
4. Slide the aluminum dead end body over conductor; tapered end first.
5. Select the die size for compressing the steel barrel. The die size marked on the die and the die size marked on the steel dead end must be the same.
6. Insert the conductor Into the bore of the steel dead end.

7. Compress the steel barrel full length making initial compression adjacent to the corrugations. Overlap each successive compression by approximately 1/4 die bite. Complete die closure Is required for proper compression.

8. Slide the aluminum dead end body over steel forging until the end butts solidly against the felt washer.
9. Slide the aluminum filler sleeve into the aluminum dead end body until the ends of the filler sleeve and the aluminum dead end body are flush.
10. Inject AFL Filler Compound (AFC) into filler hole until compound emerges at the felt washer. Insert and drive filler plug into hole and peen edge of hole over top surface of plug.
11. Select the die size to compress the aluminum dead end body. The die size for the aluminum dead end body and the size marked on the die must be the same.



12. It is recommended that die grooves be well lubricated with a light weight oil. Oil costing should be maintained during entire compression operation.
13. Make the initial compression on the dead end body over the steel shank beginning at the "start knurl" nearest the eye or clevis. Continue making compressions to the "stop knurl" overlapping the previous compression by 1/4 die bite. Complete die closure is required for each compression.
13. To press the dead end body and filler sleeve over the conductor, use the same die used In step 13. Make the Initial compression at the "start knurl" nearest the end of the dead end body. Complete die closure is required for each compression.
14. The compressed portion of the dead end should have a smooth uniform appearance. Remove flash, If present, with file or emery cloth.

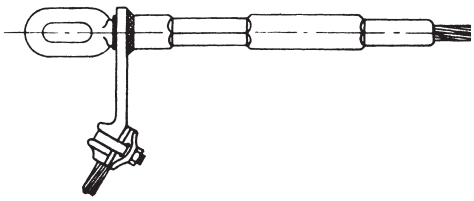
CAUTION: Follow installation instructions carefully. Improper installation can result in mechanical failure of the cable system and possible injury to persons handling or in the vicinity of the cable systems.

Installation Instructions

Bolted Jumper Connectors on Alumoweld® and Steel Ground Wire

Standard Method

1. Clean conductor and grooves of the bolted jumper. If installation is to be made on old cable, clean strands with a wire brush or emery cloth.
2. Coat the clamp groove and conductor liberally with No. 2 Electrical Joint Compound (EJC). DO NOT USE AFL FILLER COMPOUND (AFC).
3. Bolt conductor in groove, partially tighten nuts, then re-tighten each nut to recommended torque. (3/8" bolt-15 lbf-ft (20 N.m); ½" bolt-25 lbf-ft (34 N.m)
4. DO NOT remove the EJC that squeezes out when clamp is tightened.



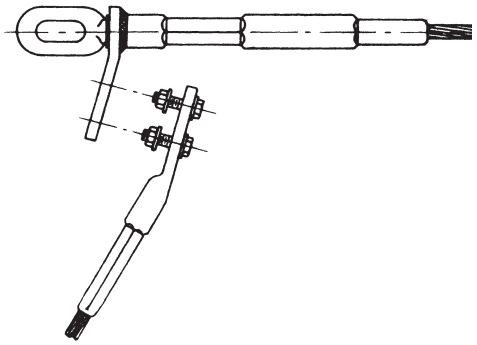
CAUTION: Follow installation instructions carefully. Improper installation can result in mechanical failure of the cable system and possible injury to persons handling or in the vicinity of the cable systems.

Installation Instructions

Terminal Connectors on Alumoweld® and Steel Ground Wire

Standard Method

1. Insert conductor full depth Into terminal bore and mark conductor at end of barrel. Remove conductor after marking.
2. Inject sufficient AFL Filler Compound (AFC) in the end of the terminal bore and on the conductor to ensure that excess compound will be visible at terminal and when barrel is completely compressed.
3. Insert clean end of the conductor into the terminal barrel to the mark on the conductor.
4. Select die size for compressing aluminum terminal. The die size on die and die size marked on the terminal must be the same.
5. Make initial compression starting at "start knurl". Continue making compressions to the mouth of the terminal overlapping the previous compression by approximately 1/4 die bite. Complete die closure is required for each compression. Compressed portion of the terminal should have a smooth uniform appearance. Remove flash, if present, with file or emery cloth.
6. Clean contact surface of terminal and of dead and pad by wire brushing through No. 2 Electrical Joint Compound (EJC). DO NOT USE AFL FILLER COMPOUND (AFC).
7. Bolt terminal to dead end pad. Partially tighten all bolts and then re-tighten each bolt to recommended torque. ½" bolt-25 lbf-ft (34 N.m); 5/8" bolt-40 lbf-ft (54 N.m)



CAUTION: Follow installation instructions carefully. Improper installation can result in mechanical failure of the cable system and possible injury to persons handling or in the vicinity of the cable systems.

Installation Instructions

Standard Compression Splice for ACSR

1. Mark the conductor a distance of ½ the length of the aluminum sleeve (***Figure 1***).

2. Prior to making connection, the outer strands of the conductor should be cleaned with a wire brush or abrasive cloth (***Figure 2***).

3. Remark each conductor half the length of the aluminum sleeve, if the mark was removed during wire brushing. Prior to any strand cutting, tape the end of each conductor to help maintain the round contour (***Figure 3***).

4. Slide the aluminum sleeve over one conductor until sufficient working length protrudes from end (***Figure 4***).

5. Cut back aluminum strands of both conductors ½ the length of the steel sleeve plus 1 inch (25.4 mm). Do not nick the steel strands. File any burrs, if present (***Figure 5a***). Use of a cable trimming tool is recommended (***Figure 5b***).

6. Insert ends of steel core into steel sleeve making sure the ends butt solidly against center stop (***Figure 6***).

7. Using the proper SH die set, compress steel sleeve full length making initial compression over center of sleeve (***Figure 7a***), Overlap each successive compression by at least ¼ inch (6.4 mm) (***Figure 7b***). Complete die closure is required on all compressions.

FIGURE 1: Mark the conductor and clean 1/2 the length of the sleeve.

FIGURE 2: Clean the outer strands of the conductor with a wire brush.

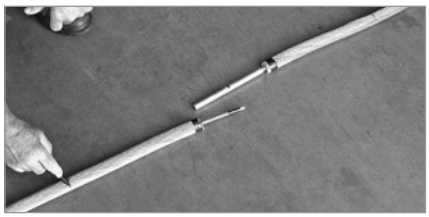


FIGURE 3: Re-mark the conductors after cleaning if needed.

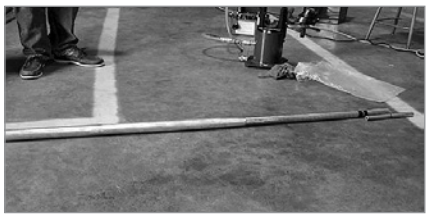

FIGURE 4: Slide sleeve over one conductor so it protrudes out the end.

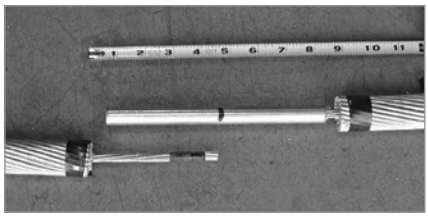

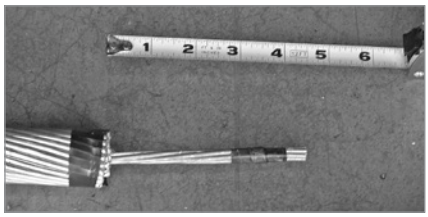

FIGURE 5a: Cut back the Aluminum strands on both conductors 1/2 the length of the Steel sleeve plus 1 inch (25.4 mm).

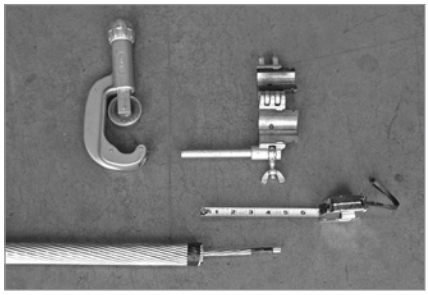

FIGURE 5b: Use of a cable trimming tool is recommended.

FIGURE 6: Slide sleeve over one conductor so it protrudes out the end.

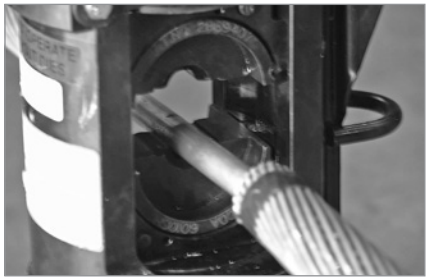

FIGURE 7a: Make the initial compression on center of Steel sleeve.

FIGURE 7b: Overlap each compression on Steel sleeve 1/4 inch (6.4 mm).

Installation Instructions (cont.)

Standard Compression Splice for ACSR

8. Slide the aluminum sleeve over the installed steel sleeve, centering between the two marks that were made in ***Step 3*** (***Figure 8a & 8b***).

9. Inject AFC filler compound into the filler hole until compound emerges from both ends of aluminum sleeve (***Figure 9***).

10. Insert and drive filler plug (cavity up) into hole and peen edge of hole over top surface of plug. Leaving the filler plug in the small plastic bag makes it easier to insert when working with gloves (***Figure 10a, 10b & 10c***).

11. Using the proper AH die set, make the initial compression at the "start" mark on one side of center (***Figure 11a***). The second compression should be made at the other "start" mark on opposite side of center. Continue making compressions to the end, overlapping each by at least ¼ inch (6.4 mm) (***Figure 11b***). Repeat this on opposite side of joint (***Figure 11c***). Complete die closure is required for each compression.

Note: A light oil coating on the die grooves and aluminum sleeve is recommended.

12. Compressed portion of splice sleeve should have a smooth uniform appearance. If die flash is present, remove with a file or emery cloth (***Figure 12***). Remove any excess filler compound which may have been forced out the ends of the splice.

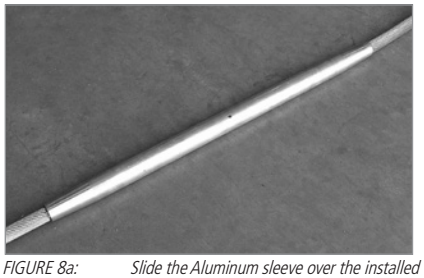

FIGURE 8a: Slide the Aluminum sleeve over the installed Steel sleeve.

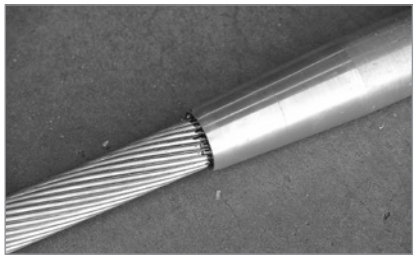

FIGURE 8b: Center the Aluminum sleeve between the marks.

FIGURE 9: Inject AFC Filler Compound into the filler hole.

FIGURE 10a: Peen edge of filler hole over top surface of plug.

FIGURE 10b: Filler plug left in plastic bag is easier to insert with gloves.

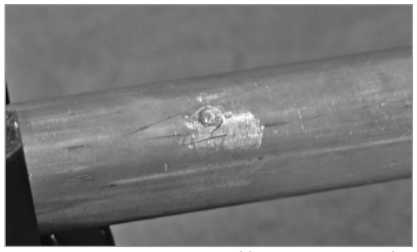

FIGURE 10c: Peen edge of filler hole over top surface of plug.

FIGURE 11a: Make the initial compression at the "start" mark.

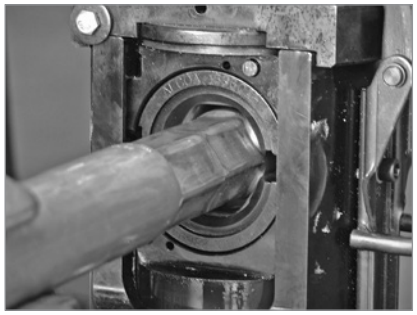

FIGURE 11b: Overlap each compression by 1/4 inch (6.4 mm).

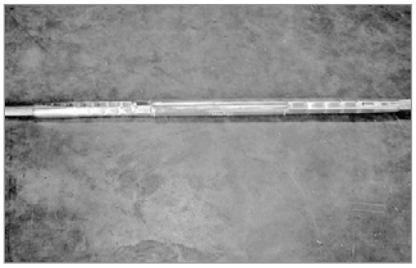

FIGURE 11c: Completed compression splice.

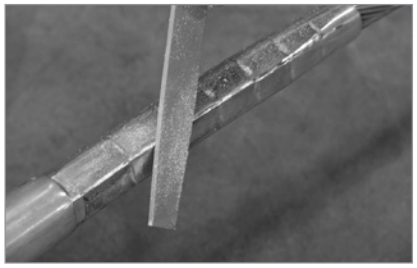

FIGURE 12: If die flash is present, remove with a file or emery cloth.

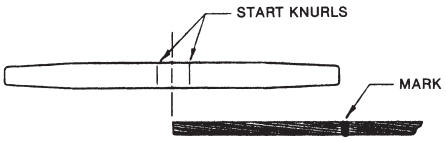
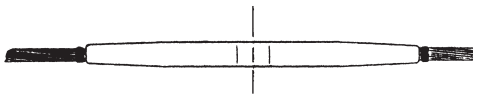
Installation Instructions

Compression Joints on AAC, AAAC, ACAR and AWAC Conductors

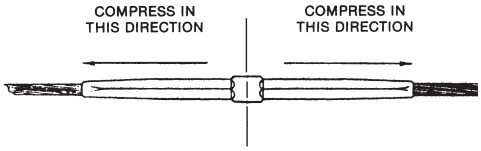
1. Measure back from each conductor end and mark at a distance equal to ½ the length of the aluminum joint.
2. File burrs or sharp edges off the aluminum strands as necessary for ease of insertion.
3. Prior to making connections, the conductor must be wire brushed and accessory bores must be clean. If the conductor is weathered or blackened, carefully unlay aluminum strands for a distance equal to or greater than ½ the length of the aluminum joint and clean strands thoroughly with wire brush or abrasive cloth. Check accessory bore for foreign particles, removing if present.
4. Straighten several feet of conductor removing Set caused by reel.



5. Inject AFL Filler Compound (AFC) into each end of joint and on the conductor to ensure that excess compound will be forced from the barrel when compressions are completed. Insert conductor ends Into the joint. If the mark on the conductor Is not at end of the joint, and there is resistance to further entry, twist the joint on the conductor. This will work the compound between conductor strands and bleed air from the joint.
6. Select die size for compressing joint. The die size on die and die size marked on aluminum joint must be the same.
7. The joint will bow during compression unless reasonable care is taken to have about 15 ft. (4.5 m) of the conductor supported straight out from both ends of the joint such that the weight of the conductor does not hang unsupported from the end of the joint when compressing.



8. Make initial compression on either side of joint starting at the "start knurl". Make the second compression on the opposite and of the joint at the other "start knurl". Continue making compressions to one end of joint overlapping the previous compression by approximately 1/4 die bite. Complete die closure is required for each compression. Go back and complete the compressions on the opposite end. The center portion of the joint, approximately one inch, is not compressed. It is recommended that die grooves be well lubricated with a light weight oil. Oil coating should be maintained during entire compression operation.
9. Compressed portion of the joint should have a smooth uniform appearance. Remove flash, if present, with file or emery cloth.

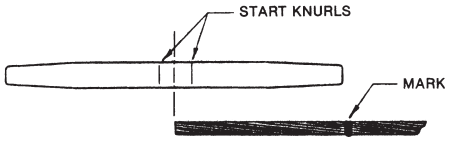


CAUTION: Follow installation instructions carefully. Improper installation can result in mechanical failure of the cable system and possible injury to persons handling or in the vicinity of the cable systems.

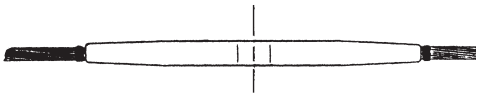
Installation Instructions

Compression Joints on AWAC, Alumoweld® and Steel Ground Wire

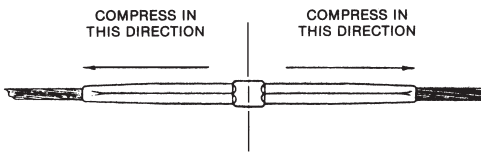
1. Measure back from each conductor end and mark at a distance equal to ½ the length of the aluminum joint.
2. File burrs or sharp edges off the conductor strands as necessary for ease of insertion.
3. Prior to making connections, the conductor must be clean. If the conductor is weathered or blackened, clean strands thoroughly with wire brush or abrasive cloth.
4. Straighten several feet of conductor, removing set caused by reel.



5. Insert conductor ends into the joint. If the mark on the conductor is not at the end of the joint, and there is resistance to further entry, twist the joint on the conductor. This will work the compound between conductor strands and blood air from the joint. (Joints are prefilled so additional AFL Filler Compound (AFC) should not be required.)
6. Select die size for compressing joint. Die size on die and die size marked on aluminum joint must be the same.
7. The joint will bow during compression unless reasonable care Is taken to have about 15 ft. (4.5 m) of the conductor supported straight out from both ends of the joint such that the weight of the conductor does not hang unsupported from the end of the joint when compressing.



8. Make initial compression on either side of the joint starting at the "start knurl". Make the second compression on the opposite end of the joint at the other "start knurl". Continue making compressions to one end of joint overlapping the previous compression by approximately 1/4 die bite. Complete die closure is required for each compression. Go back and complete the compressions on the opposite end. The center portion of the joint, approximately one inch, is not compressed. It is recommended that die grooves be well lubricated with a light weight oil. Oil coating should be maintained during entire compression operation.
9. Compressed portion of the joint should have a smooth appearance. Remove flash, If present, with file or emery cloth.
10. Single piece compression joints (jiffy joints) for ACSR, ACAR, AWAC and alloy conductors follow the procedure above.

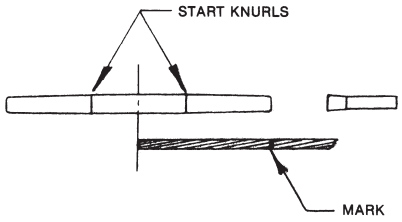


CAUTION: Follow installation instructions carefully. Improper installation can result in mechanical failure of the cable system and possible injury to persons handling or in the vicinity of the cable systems.

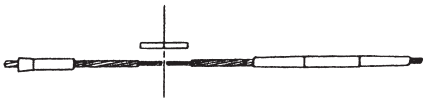
Installation Instructions

Compression Joints on Extra High Strength ACSR Conductors

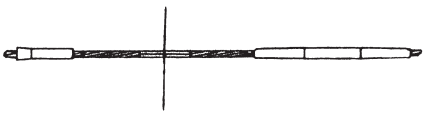
1. Measure back from each conductor end and mark at a distance equal to ½ the length of the aluminum joint.
2. Prior to making connections, the conductor must be wire brushed and accessory bore must be clean. If the conductor is weathered or blackened, carefully unlay aluminum strands for a distance equal to or greater than ½ the length of the aluminum joint and clean strands thoroughly with wire brush or abrasive cloth. Check accessory bore for foreign particles, removing if present.
3. Prior to cutting, serve the conductor with tape to help maintain the round contour making it easier to slide the end through the joint and filler sleeve.
4. Straighten several feet of conductor removing set caused by reel.



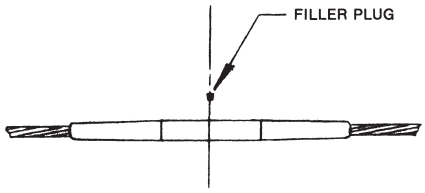
5. Slide the aluminum filler sleeve over conductor end beyond mark.
6. Slide the aluminum joint over other conductor end beyond mark. End with staked if filler sleeve first.
7. Cutback aluminum strands on each conductor end a distance equal to ½ the length of the steel joint plus one inch (25.4 mm). Do not nick steel strands. File burrs as necessary for ease of insertion.



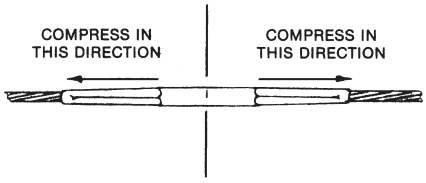
8. Insert ends of steel core into the steel joint making sure the ends butt solidly against center stop.
9. Select die size for compression steel joint. The die size on die and die size marked on steel joint must be the same.
10. Compress steel joint full length making initial compression over center stop. Overlap each successive compression by approximately 1/4 die bits. Complete die closure is required for each compression.



11. Remove tape from ends of aluminum strands. Slide the aluminum joint over the installed steel joint and center between the two marks on the cable.
12. Slide the aluminum filler sleeve into the aluminum joint until ends of the filler sleeve and aluminum joint are flush.
13. Inject AFL Filler Compound (AFC) into filler hole at end of joint until compound is visible at both ends of joint. Insert drive filler plug into hole and peen edge of hole over top surface of plug.
14. Select die size to compress aluminum joint. Die size for aluminum joint and die size marked on die must be the same.
15. The joint will bow during compression unless reasonable care is taken to have about 15 ft. (4.5 m) of the conductor supported straight out from both ends of the joint such that the eight of the conductor does not hang unsupported from the end of the joint when compressing.



16. Make initial compression on either side of joint starting at the "start knurl". Make the second compression on the opposite end of the joint at the other "start knurl". Continue making compressions to one end of the joint overlapping the previous compression by approximately 1/4 die bite. Complete die closure is required for each compression. Go back and complete the compression on the opposite end. The center portion of the joint is not compressed. It Is recommended that die grooves be well lubricated with a light weight oil. Oil coating should be maintained during entire compression operation.
17. Compressed portion of the joint should have a smooth uniform appearance. Remove flash, if present, with file or emery cloth.

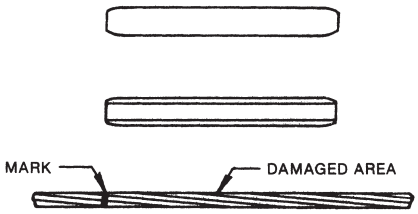


CAUTION: Follow installation instructions carefully. Improper installation can result in mechanical failure of the cable system and possible injury to persons handling or in the vicinity of the cable systems.

Installation Instructions

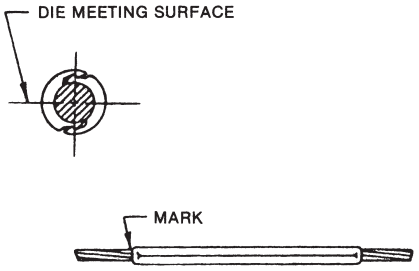
Standard Compression Repair Sleeves on ACSR, AAC, AAAC and ACAR Conductors

1. Compression Repair Sleeves can be used to restore the electrical and mechanical integrity of a conductor when no more than 1/3 of the aluminum strands are damaged.
2. Mark the conductor from the damaged area 1/2 the length of the repair sleeve.
3. Select die size for compressing the repair sleeve. The die size on the die and the die size marked on the repair sleeve must be the same.
4. Prior to making connections. the groove of the aluminum accessories and the conductor must be clean. If the conductor is weathered or blackened, clean strands thoroughly with wire brush. Check accessory groove for foreign particles, removing if present.
5. Coat the aluminum conductor with AFL Filler Compound (AFC) over the length to be covered by the repair sleeve.



6. Place the repair sleeve groove on the conductor adjacent to damaged area and slide other half (keeper) in place.

7. Slide repair sleeve assembly over the damaged area to the mark on the conductor.
8. Make the initial compression over the center portion of the repair sleeve. Make the second compression on one end overlapping the initial compression by 1/4 die bite. Make the third compression on the opposite end, overlapping the initial compression by 1/4 die bite. Continue making compressions to one end of the repair sleeve overlapping the previous compression by 1/4 die bite. Complete die closure is required for each compression. Go back and complete the compression on the opposite end.
9. The compressed repair sleeve should have a smooth uniform appearance. Remove flash, if present, with file or emery cloth.

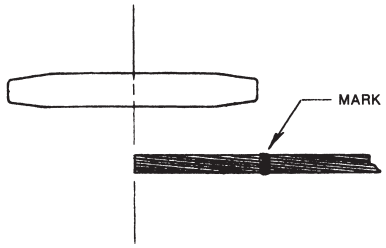


CAUTION: ***Follow installation instructions carefully. Improper installation can result in mechanical failure of the cable system and possible injury to persons handling or in the vicinity of the cable systems.***

Installation Instructions

Standard Compression and Quick Compress® Jumper Connectors on ACSR, AAC, AAAC, ACAR, Alumoweld® and Steel Ground Wire Conductor

1. Measure back from each conductor end and mark at a distance equal to 1/2 the length of the aluminum jumper connector.
2. File burrs or sharp edges off the aluminum strands as necessary for ease of insertion.
3. Prior to making connections, the conductor must be wire brushed and accessory bores must be clean. If the conductor Is weathered or blackened, carefully unlay aluminum strands for a distance equal to or greater than 1/2 the length of the aluminum jumper connector and clean strands thoroughly with wire brush. An alternate way to thoroughly clean the aluminum oxidation from the conductor is to use the ConductaClean® system.Check accessory bore for foreign particles, removing if present.



4. Inject AFL Filler Compound (AFC) into each end of jumper connector and on the conductor to insure that excess compound will be forced from the jumper connector when compressions are completed. Insert conductor ends into the jumper connector. If the mark on the conductor is not at the end of the jumper connector, and there is resistance to further entry, twist the jumper connector on the conductor. This will work the compound between conductor strands and bleed air from the jumper connector.
5. Select die size for compressing jumper connector. The die size on die and die size marked on aluminum jumper connector must be the same.
6. The jumper connector will bow during compression unless reasonable care Is taken to have about 15 ft. (4.5 m) of the conductor supported straight out from both ends of the jumper connector such that the weight of the conductor does not hang unsupported from the end of the jumper connector when compressing.

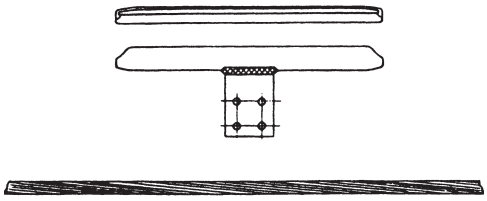
7. Compress jumper connector full length making initial compression over center stop. Overlap each successive compression by approximately 1/4 die bite. Complete die closure is required for each compression.
8. Compressed jumper connector should have a smooth uniform appearance. Remove flash, if present, with file or emery cloth.

CAUTION: Follow installation instructions carefully. Improper installation can result in mechanical failure of the cable system and possible injury to persons handling or in the vicinity of the cable systems.

Installation Instructions

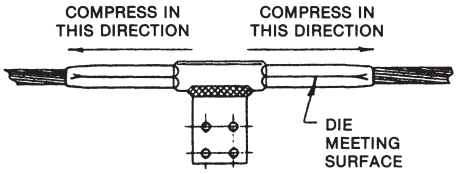
Open Run Tee Taps and Tee Connectors on ACSR, AAC, AAAC and ACAR Conductors

1. Remove the keeper.
2. Select die size for compressing the aluminum run. The die size on the die and die size marked on the aluminum run must be the same.
3. Prior to making connections, the groove of the aluminum accessories and the conductor must be clean. If the conductor is weathered or blackened, clean strands thoroughly with wire brush or abrasive cloth. Check the accessory groove for foreign particles, removing if present.
4. Coat the aluminum conductor with AFL Filler Compound (AFC) over the length to be covered by the tee tap.



5. Place run groove on conductor and slide the keeper In place.

6. Make initial compression on either side of run starting at the "start knurl". Make the second compression on the opposite end of the run at the "start knurl". Continue making compressions to one end of the tee overlapping the previous compression by approximately 1/4 die bite. Complete die closure is required for each compression. Go back and complete the compression on the opposite end.
7. Compressed portion of tee should have a smooth uniform appearance. Remove flash, If present, with file or emery cloth.
8. See page 131 for terminal installation instructions.

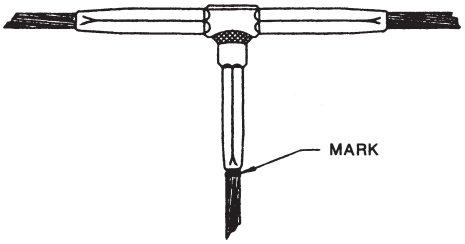


CAUTION: Follow installation instructions carefully. Improper installation can result in mechanical failure of the cable system and possible injury to persons handling or in the vicinity of the cable systems.

Installation Instructions

Open Run Tee Connectors on ACSR, AAC, AAAC and ACAR Conductors

Installation of Tee With Compression Branch



1. Install run tee as before per steps 1-7, page 144.
2. Select die size for compressing aluminum branch. The die size on die and the die size on the branch must be the same.
3. Insert conductor full depth into branch bore and mark conductor at end of branch. Remove conductor after marking.
4. Inject sufficient AFL Filler Compound (AFC) in the end of the branch bore and on the conductor to ensure that excess compound will be visible at the branch end when completely compressed.
5. Insert cleaned end of the conductor into the branch to the mark on the conductor.
6. Make initial compression starting at the "start knurl". Continue making compressions to mouth of the branch overlapping the previous compression by approximately 1/4 die bite. Complete die closure is required for each compression.
7. Compressed portion of the branch should have a smooth uniform appearance. Remove flash, it present. with file or emery cloth.

Quick Compress Accessories for Maximum Conductor Operating Temperatures of 100°C (212°F)

In the past, three separate compression accessory series were required to connect ACSR, AAC, AAAC and ACAR. To assist utilities and distributors in reducing inventory, AFL designed one series of compression accessories that can handle all four conductor types, the Quick Compress Product Line. Quick Compress handles these conductors while maintaining the same mechanical and electrical reliability as other AFL product lines.

There are two primary characteristics that make Quick Compress different from any other accessory line. First, it is made of a high strength aluminum alloy, which has a minimum tensile strength nearly twice that of other compression accessory systems. This means that for the same conductor size, smaller connectors can be used without any fear of sacrificing strength. Secondly, Quick Compress uses an aluminum 'core grip' to hold the steel core of ACSR. This eliminates the need to have a dead end steel compression barrel or a steel sleeve for full tension ACSR joints. By eliminating the steel, only one set of dies is required for installing Quick Compress Accessories.

All compression accessories are designed to operate at a temperature 15% to 25% cooler than the conductor. Quick Compress accessories are designed for a maximum conductor operating temperature of 100°C (212°F). For applications exceeding 100°C (212°F) operating temperature, see the Standard and HiTemp® Compression Accessories sections.

Features

Installs in 40% Less Time

Quick Compress Accessories are designed to save valuable time. They are made of a high strength alloy allowing for shorter accessories resulting in fewer compression bites. The accessories come pre-filled, the steel eye is pre-compressed and a one-piece core grip is included. Compared to other two-die accessory systems, Quick Compress Accessories can be installed in 40% less time.

One-Piece Core Grip

When using ACSR conductor, the one-piece core grip eliminates the need for a dead end steel compression barrel or a steel sleeve for full tension compression joints.

Factory Installed Eye

The dead end features a steel eye that is oriented and installed at the factory. This decreases installation time and eliminates costly field errors.

Factory Pre-filled

Quick Compress dead ends, joints, terminals and jumper connectors are prefilled with AFL Filler Compound (AFC) and capped to prevent loss of compound prior to installation, eliminating an installation step.

High Voltage Applications

The end tapers of all compression accessories are supplied with a high voltage finish for die sizes 12CD and above. Corona bolts are furnished standard on 15° terminals for these section sizes. The square edges of bolted pads of the compression accessories could cause Corona. Pads with rounded edges and corners can be supplied by adding the catalog suffix 'EHV'.

Quick Compress Catalog Numbering System

The simplified AFL catalog numbering system for alloy compression connectors facilitates specying, ordering and inventory control. The catalog number is stamped on each compression connector for easy and positive field identification.

Example: Catalog No. VES126

TYPE OF CONNECTOR	TUBE CODE	CORE GRIP CODE
VES (see table below)	① **XX**	②③ **Y** ⑤ **Y N T**

Example:

CONDUCTOR	DEAD END	CORE GRIP	DIE SIZE	TERMINAL	DEAD END ASSEMBLY
795.26/7 ACSR	VES12	CG126	12CD	TF12	VES126
927 kcmil-6201	VES12	–	12CD	TF12	VES120
954 kcmil-1350(EC)	VESE12	–	12CD	TF12	VES120

⑦TYPE OF CONNECTOR	STANDARD U.S. SIZES			BRITISH, EUROPEAN AND STANDARD METRIC SIZES

Tee Tap - Open Run, Cable to Pad	TTOP	TTOP	TTOP	TTOPM	TTOPM	TTOPM

NOTES:

① The two digit number (denoted by XX) defines tube code. These numbers will be 07 through 21 inclusive.

② A single digit suffix (denoted by Y) is used to order the dead end assembly or joint assembly. This suffix also shows the core grip code. These numbers will be 0 through 7 inclusive, where 0 indicates no core grip and 1 through 7 indicates the core grip for a given tube size.

③ The dead end assembly for an ACSR consists of the prefilled aluminum dead end body precompressed onto the steel eye, the 15° terminal connector, hardware and core grip. Double tongue dead end assemblies include two terminal connectors. The joint assembly for ACSR consists of a prefilled aluminum sleeve and two core grips.

④ The dead end assembly for SAC conductors consists of the prefilled dead end body, precompressed onto the steel eye, the 15° terminal connector and hardware. Double tongue dead end assemblies include two terminal connectors.

⑤ To order dead end assembly without the jumper terminal, specify VESXXYNT. For the VES126NT, the assembly would consist of the VES12 dead end and CG126 core grip for the 795 26/7 ACSR.

⑥ The 15° terminal connectors are supplied with 1/2 inch aluminum alloy bolts, nuts and washers. Terminal sizes 12 and larger are supplied with corona bolts.

⑦ With the exception of repair sleeves, tee connectors and tee taps all of the compression barrels are prefilled with AFC.

⑧ Die code for compressors:

		Compressor Model:	
B – CD		12A	
30 – CD		30A	
60 – CD		60A	
100 – CD		100A

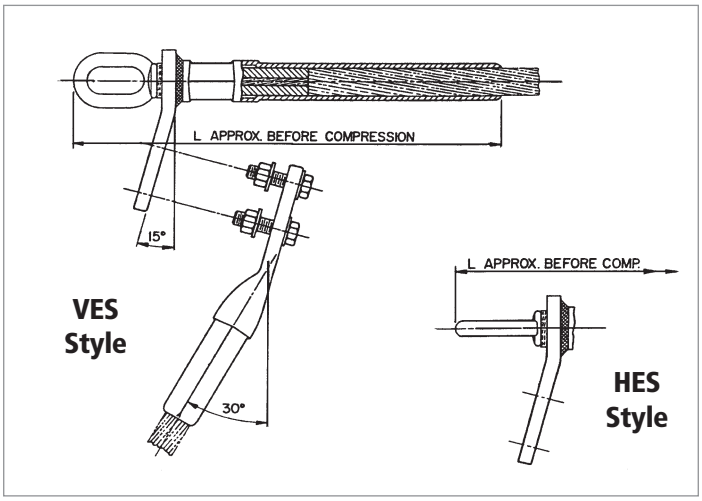
Quick Compress Dead Ends for ACSR Conductor, Eye Type, Single Tongue, VES/HES Series



The Quick Compress Dead Ends are designed for fast and easy installation. By using a high strength alloy, the compression length has been shortened for less compression bites while maintaining a minimum 95% of the ASTM rated strength. The core grip eliminates the need for a steel compression barrel. The steel eye is pre-compressed and the dead end pre-filled, eliminating installation steps.

The dead end tongue and terminal pad are each constructed with a 15° angle, which permits the terminal connector to be bolted in either the straight or the 30° position. Both sides of the pad are finished, creating excellent electrical contact surfaces. For pad to pad connections, AFL recommends the use of No. 2 EJC.

The end tapers of all compression accessories are supplied with a high voltage finish for die sizes 12CD and above. Corona bolts are furnished standard on 15° terminals for these section sizes.
The square edges of bolted pads of the compression accessories could cause Corona. Pads with rounded edges and corners can be supplied by adding the catalog suffix 'EHV'.

Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Step 2: Terminal Connector

For an assembly without a terminal connector, use 'NT'.
For an assembly with a terminal connector, leave blank.

Step 3: Extra High Voltage Finish

For Extra High Voltage Finish, use 'EHV'. (≥ 345 kV)
For Standard Finish, leave blank. (< 345 kV)

Step 4: Assemble Catalog Number

Assy Catalog Number	+	Terminal Connector	+	EHV Finish

Example:

For a vertical eye dead end with no terminal and EHV finish for 795 Drake, the complete catalog number is:

VES126NTEHV

Notes:

1. Assembly Catalog Number includes dead end, core grip, terminal connector and aluminum hardware.
2. Eye Dimensions are on page 257.
3. Pad Dimensions are on page 257.
4. Installation Instructions for Dead Ends are on page 265.
5. Installation Instructions for Terminals are on page 272.
6. For more information on die selection and ordering instructions, see Tools and Equipment in this catalog.

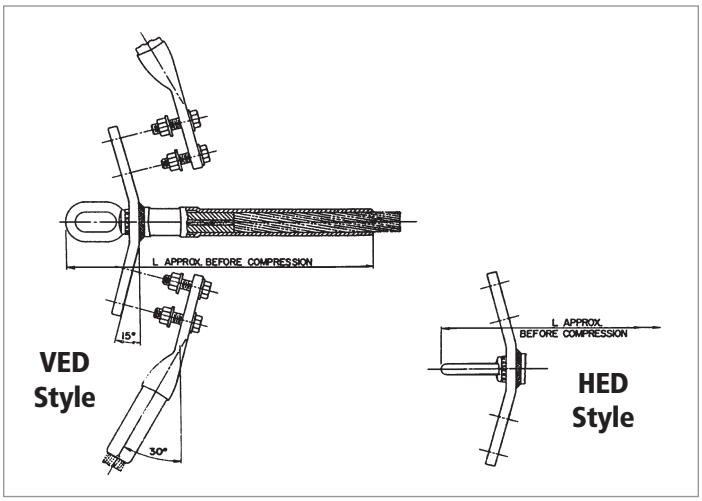
Quick Compress Dead Ends for ACSR Conductor, Eye Type, Double Tongue, VED/HED Series



The Quick Compress Dead Ends are designed for fast and easy installation. By using a high strength alloy, the compression length has been shortened for less compression bites while maintaining a minimum 95% of the ASTM rated strength. The core grip eliminates the need for a steel compression barrel. The steel eye is precompressed and the dead end pre-filled, eliminating installation steps.

The dead end tongue and terminal pad are each constructed with a 15° angle, which permits the terminal connector to be bolted in either the straight or the 30° position. Both sides of the pad are finished, creating excellent electrical contact surfaces. For pad to pad connections, AFL recommends the use of No. 2 EJC.

The end tapers of all compression accessories are supplied with a high voltage finish for die sizes 12CD and above. Corona bolts are furnished standard on 15° terminals for these section sizes.
The square edges of bolted pads of the compression accessories could cause Corona. Pads with rounded edges and corners can be supplied by adding the catalog suffix 'EHV'.

Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Step 2: Terminal Connector

For an assembly without a terminal connector, use 'NT'.
For an assembly with a terminal connector, leave blank.

Step 3: Extra High Voltage Finish

For Extra High Voltage Finish, use 'EHV'. (≥ 345 kV)
For Standard Finish, leave blank. (< 345 kV)

Step 4: Assemble Catalog Number.

Assy Catalog Number + **Terminal Connector** + **EHV Finish**

Example:

For a vertical eye dead end with no terminal and EHV finish for 795 Drake, the complete catalog number is:

VED128NTEHV

Notes:

1. Assembly Catalog Number includes dead end, core grip, two terminal connectors and aluminum hardware.
2. Eye Dimensions are on page 257.
3. Pad Dimensions are on page 257.
4. Installation Instructions for Dead Ends are on page 265.
5. Installation Instructions for Terminals are on page 272.
6. For more information on die selection and ordering instructions, see Tools and Equipment in this catalog.

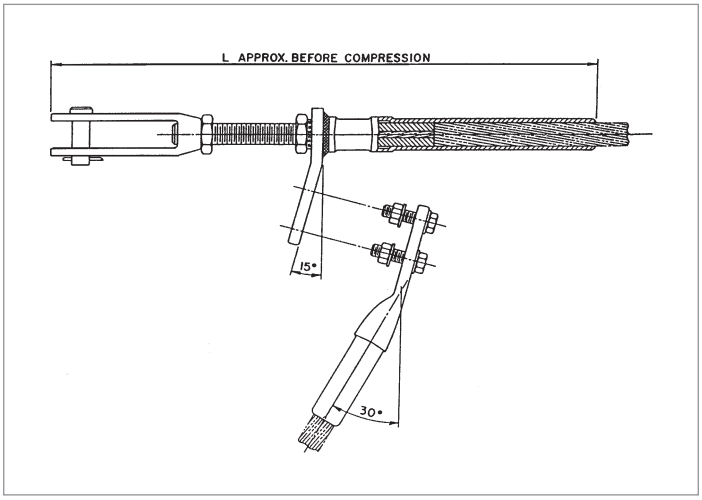
Quick Compress Dead Ends for ACSR Conductor, Adjustable Clevis Type, Single Tongue, ACS Series



The Quick Compress Dead Ends are designed for fast and easy installation. By using a high strength alloy, the compression length has been shortened for less compression bites while maintaining a minimum 95% of the ASTM rated strength. The core grip eliminates the need for a steel compression barrel. The adjustable steel clevis is pre-compressed and the dead end pre-filled, eliminating installation steps.

The dead end tongue and terminal pad are each constructed with a 15° angle, which permits the terminal connector to be bolted in either the straight or the 30° position. Both sides of the pad are finished, creating excellent electrical contact surfaces. For pad to pad connections, AFL recommends the use of No. 2 EJC.

The end tapers of all compression accessories are supplied with a high voltage finish for die sizes 12CD and above. Corona bolts are furnished standard on 15° terminals for these section sizes.
The square edges of bolted pads of the compression accessories could cause Corona. Pads with rounded edges and corners can be supplied by adding the catalog suffix 'EHV'.

Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Step 2: Terminal Connector

For an assembly without a terminal connector, use 'NT'.
For an assembly with a terminal connector, leave blank.

Step 3: Extra High Voltage Finish

For Extra High Voltage Finish, use 'EHV'. (≥ 345 kV)
For Standard Finish, leave blank. (< 345 kV)

Step 4: Assemble Catalog Number.

Assy Catalog Number + **Terminal Connector** + **EHV Finish**

Example:

For an adjustable clevis dead end with no terminal and EHV finish for 795 Drake, the complete catalog number is:

ACS126NTEHV

Notes:

1. Assembly Catalog Number includes dead end, core grip, terminal connector and aluminum hardware.
2. Clevis Dimensions are on page 258.
3. Pad Dimensions are on page 257.
4. Installation Instructions for Dead Ends are on page 265.
5. Installation Instructions for Terminals are on page 272.
6. For more information on die selection and ordering instructions, see Tools and Equipment tab in this catalog.

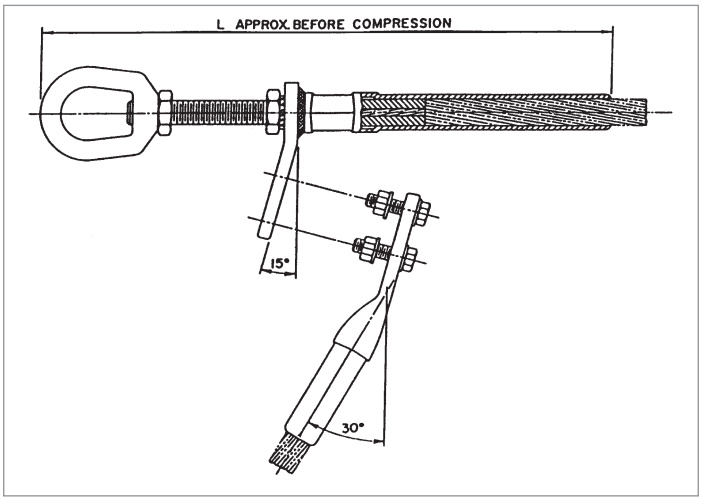
Quick Compress Dead Ends for ACSR Conductor, Adjustable Eye Type, Single Tongue, AES Series



The Quick Compress Dead Ends are designed for fast and easy installation. By using a high strength alloy, the compression length has been shortened for less compression bites while maintaining a minimum 95% of the ASTM rated strength. The core grip eliminates the need for a steel compression barrel. The adjustable steel eye is pre-compressed and the dead end pre-filled, eliminating installation steps.

The dead end tongue and terminal pad are each constructed with a 15° angle, which permits the terminal connector to be bolted in either the straight or the 30° position. Both sides of the pad are finished, creating excellent electrical contact surfaces. For pad to pad connections, AFL recommends the use of No. 2 EJC.

The end tapers of all compression accessories are supplied with a high voltage finish for die sizes 12CD and above. Corona bolts are furnished standard on 15° terminals for these section sizes.
The square edges of bolted pads of the compression accessories could cause Corona. Pads with rounded edges and corners can be supplied by adding the catalog suffix 'EHV'.

Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Step 2: Terminal Connector

For an assembly without a terminal connector, use 'NT'.
For an assembly with a terminal connector, leave blank.

Step 3: Extra High Voltage Finish

For Extra High Voltage Finish, use 'EHV'. (≥ 345 kV)
For Standard Finish, leave blank. (< 345 kV)

Step 4: Assemble Catalog Number.

Assy Catalog Number + **Terminal Connector** + **EHV Finish**

Example:

For an adjustable eye dead end with no terminal and EHV finish for 795 Drake, the complete catalog number is:

AES126NTEHV

Notes:

1. Assembly Catalog Number includes dead end, core grip, terminal connector and aluminum hardware.
2. Eye Dimensions are on page 258.
3. Pad Dimensions are on page 257.
4. Installation Instructions for Dead Ends are on page 265.
5. Installation Instructions for Terminals are on page 272.
6. For more information on die selection and ordering instructions, see Tools and Equipment tab in this catalog.

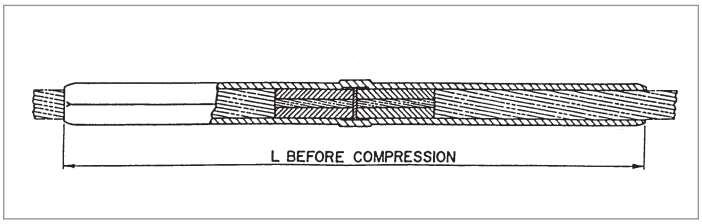
Quick Compress Compression Joints for ACSR Conductor, CJ Series



The Quick Compress CJ Series Joints are designed for fast and easy installation. By using a high strength alloy, the compression length has been shortened for less compression bites while maintaining a minimum 95% of the ASTM rated strength. The core grip eliminates the need for a steel sleeve. The compression joint is pre-filled, eliminating an installation step. Each compression joint has a center stop to ensure proper insertion of the conductor.

The end tapers of all compression accessories are supplied with a high voltage finish for die size sections 12CD and above.

Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Example:

A compression joint for 795 Drake conductor, the complete catalog number is:

CJ126

Notes:

1. Assembly Catalog Number includes one aluminum joint and two core grips.
2. Installation Instructions for Compression Joints are on page 269.
3. For more information on die selection and ordering instructions, see Tools and Equipment tab in this catalog.

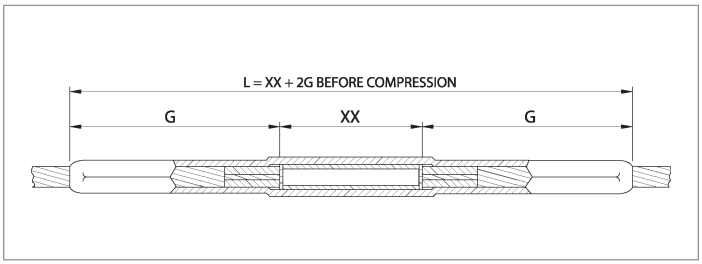
Quick Compress Replacement Compression Joints for ACSR Conductor, CJR Series



The Quick Compress Replacement Joints are used to replace damaged conductor in midspan. They are designed for fast and easy installation. By using a high strength alloy, the compression length has been shortened for less compression bits, while maintaining a minimum 95% of the ASTM rated strength. The replacement joint is pre-filled, eliminating an installation step.

The end tapers of all compression accessories are supplied with a high voltage finish for die size sections 12CD and above.

Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Step 2: Determine Length of Conductor Removed (XX)

Determine the length of conductor (XX) that will be cut out, to the nearest inch (Maximum 48").

Step 3: Assemble Catalog Number

Catalog Number + **Removed Conductor Length (XX)**

Example:

A replacement compression joint for 795 Drake conductor with a removed conductor length of 24 inches, the complete catalog number is:

CJ126R24

Notes:

1. Assembly Catalog Number includes one aluminum joint and two core grips.
2. Installation Instructions for Compression Joints are on page 269.
3. For more information on die selection and ordering instructions, see Tools and Equipment tab in this catalog.

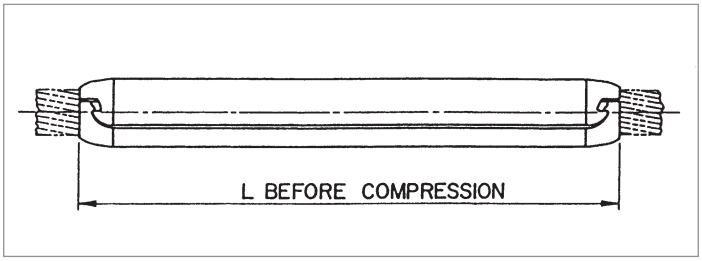
Quick Compress Repair Sleeve for ACSR Conductor, RS Series



The Quick Compress Repair Sleeve is designed for ACSR, AAC, AAAC and ACAR conductors. The repair sleeve incorporates an improved design of interlocking extrusions, providing a permanent grip on the conductor when compressed.

The repair sleeve will restore the conductor to 95% of its ASTM rated strength where up to one-third of the aluminum strands are damaged.

Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Example:

A repair sleeve for 795 Drake conductor, the complete catalog number is:

RS12

Notes:

1. Installation Instructions for Compression Joints are on page 270.
2. For more information on die selection and ordering instructions, see the AFL Tool Catalog.

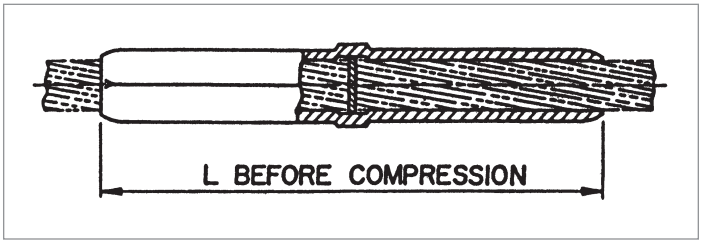
Quick Compress Jumper Connector for ACSR Conductor, JC Series



The Quick Compress Jumper Connector is designed for fast and easy installation. By using a high strength alloy, the compression length has been shortened for less compression bites. The jumper connector is pre-filled, eliminating an installation step. Each jumper connector has a center stop, making it easy to center the jumper on the conductor.

All Quick Compress Jumper Connectors are designed for limited tension use, maintaining a minimum of 40% of the ASTM rated strength of the conductor.

The end tapers of all compression accessories are supplied with a High Voltage finish for die size sections 12CD and above.

Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Example:

A jumper connector for 795 Drake conductor, the complete catalog number is:

JC12

Notes:

1. Installation Instructions for Jumpers are on page 271.
2. For more information on die selection and ordering instructions, see Tools and Equipment tab in this catalog.

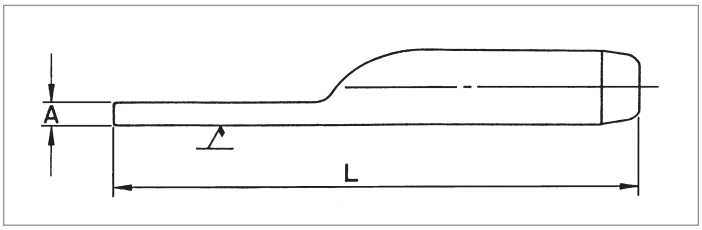
Quick Compress Terminal for ACSR Conductor, Straight, TS Series



The TS Series Straight Terminal Connector is designed for fast and easy installation. By using a high strength alloy, the compression length has been shortened for less compression bites. The terminal connector is pre-filled, eliminating an installation step.

All TS Series connectors are designed for limited tension use, maintaining a minimum of 40% of the ASTM rated strength of the conductor.

The end tapers of all compression accessories are supplied with a High Voltage finish for die size sections 12CD and above.
The square edges of bolted pads of the compression accessories could cause Corona. Pads with edges and corners rounded can be supplied by adding the catalog suffix 'EHV'.

Ordering Instructions

Step 1: Catalog Number
Determine the catalog number based on the conductor being used.

Step 2: Extra High Voltage Finish
For Extra High Voltage Finish, use 'EHV'. (≥ 345 kV)
For Standard Finish, leave blank. (< 345 kV)

Step 3: Assemble Catalog Number.

Catalog Number	+	EHV Finish

Example:
A straight terminal for 795 Drake with an EHV finish, the complete catalog number is:

TS12EHV

Notes:
1. Pad Dimensions are on page 257.
2. Installation Instructions for Terminals are on page 272.
3. Bolts, nuts and washers are not supplied with TS Series Terminal Connectors.
4. For more information on die selection and ordering instructions, see Tools and Equipment tab in this catalog.

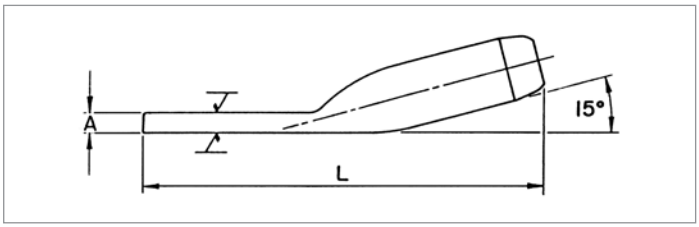
Quick Compress Terminal for ACSR Conductor, 15°, TF Series



The TF Series 15° Terminal Connector is designed for fast and easy installation. By using a high strength alloy, the compression length has been shortened for less compression bites. The terminal connector is pre-filled, eliminating an installation step.

When used with the Quick Compress dead end, the TF Series connectors can be bolted in either straight or 30° position. All TF Series connectors are designed for limited tension use, maintaining a minimum of 40% of the ASTM rated strength of the conductor.

The end tapers of all compression accessories are supplied with a High Voltage finish for die size sections 12CD and above.
The square edges of bolted pads of the compression accessories could cause Corona. Pads with edges and corners rounded can be supplied by adding the catalog suffix 'EHV'.

Ordering Instructions

Step 1: Catalog Number
Determine the catalog number based on the conductor being used.

Step 2: Extra High Voltage Finish
For Extra High Voltage Finish, use 'EHV'. (≥ 345 kV)
For Standard Finish, leave blank. (< 345 kV)

Step 3: Assemble Catalog Number.

Catalog Number	+	EHV Finish

Example:
A 15° terminal for 795 Drake with an EHV finish, the complete catalog number is:

TF12EHV

Notes:
1. Pad Dimensions are on page 257.
2. Installation Instructions for Terminals are on page 272.
3. Bolts, nuts and washers are supplied with TF Series Terminal Connectors.
4. For more information on die selection and ordering instructions, see Tools and Equipment tab in this catalog.

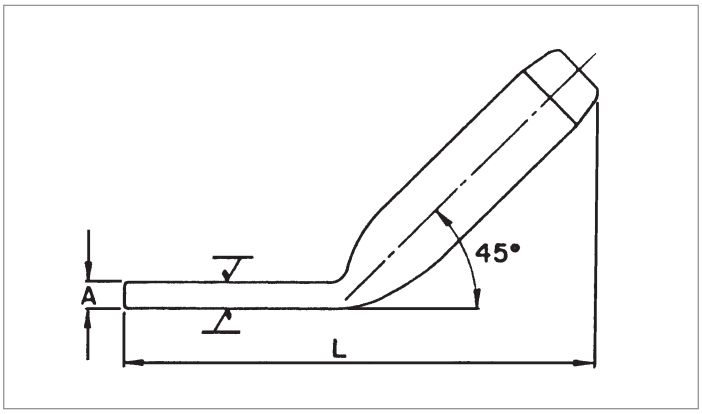
Quick Compress Terminal for ACSR Conductor, 45º, T45 Series



The T45 Series 45º Terminal Connector is designed for fast and easy installation. By using a high strength alloy, the compression length has been shortened for less compression bites. The terminal connector is pre-filled, eliminating an installation step.

All T45 Series connectors are designed for limited tension use, maintaining a minimum of 40% of the ASTM rated strength of the conductor.

The end tapers of all compression accessories are supplied with a High Voltage finish for die size sections 12CD and above. The square edges of bolted pads of the compression accessories could cause Corona. Pads with edges and corners rounded can be supplied by adding the catalog suffix 'EHV'.

Ordering Instructions

Step 1: Catalog Number

Determine the catalog number based on the conductor being used.

Step 2: Extra High Voltage Finish

For Extra High Voltage Finish, use 'EHV'. (≥ 345 kV)

For Standard Finish, leave blank. (< 345 kV)

Step 3: Assemble Catalog Number.

Catalog Number	+	EHV Finish

Example:

A 45º terminal for 795 Drake with an EHV finish, the complete catalog number is:

T4512EHV

Notes:

1. Pad Dimensions are on page 257.
2. Installation Instructions for Terminals are on page 272.
3. Bolts, nuts and washers are not supplied with T45 Series Terminal Connectors.
4. For more information on die selection and ordering instructions, see Tools and Equipment tab in this catalog.

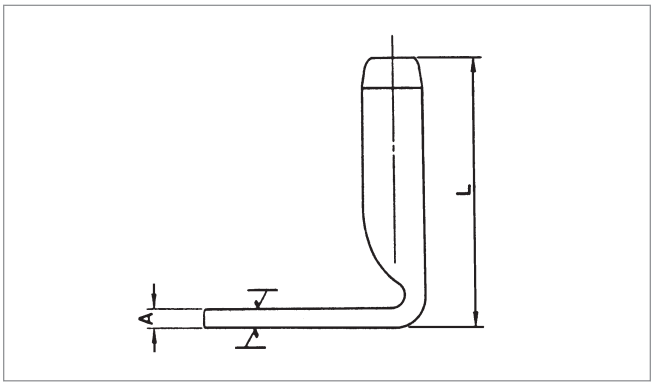
Quick Compress Terminal for ACSR Conductor, 90º, TN Series



The TN Series 90º Terminal Connector is designed for fast and easy installation. By using a high strength alloy, the compression length has been shortened for less compression bites. The terminal connector is pre-filled, eliminating an installation step.

All TN Series connectors are designed for limited tension use, maintaining a minimum of 40% of the ASTM rated strength of the conductor.

The end tapers of all compression accessories are supplied with a High Voltage finish for die size sections 12CD and above. The square edges of bolted pads of the compression accessories could cause Corona. Pads with edges and corners rounded can be supplied by adding the catalog suffix 'EHV'.

Ordering Instructions

Step 1: Catalog Number

Determine the catalog number based on the conductor being used.

Step 2: Extra High Voltage Finish

For Extra High Voltage Finish, use 'EHV'. (≥ 345 kV)
For Standard Finish, leave blank. (< 345 kV)

Step 3: Assemble Catalog Number.

Catalog Number	+	EHV Finish

Example:

A 90º terminal for 795 Drake with an EHV finish, the complete catalog number is:

TN12EHV

Notes:

1. Pad Dimensions are on page 257.
2. Installation Instructions for Terminals are on page 272.
3. Bolts, nuts and washers are not supplied with TN Series Terminal Connectors.
4. For more information on die selection and ordering instructions, see Tools and Equipment tab in this catalog.

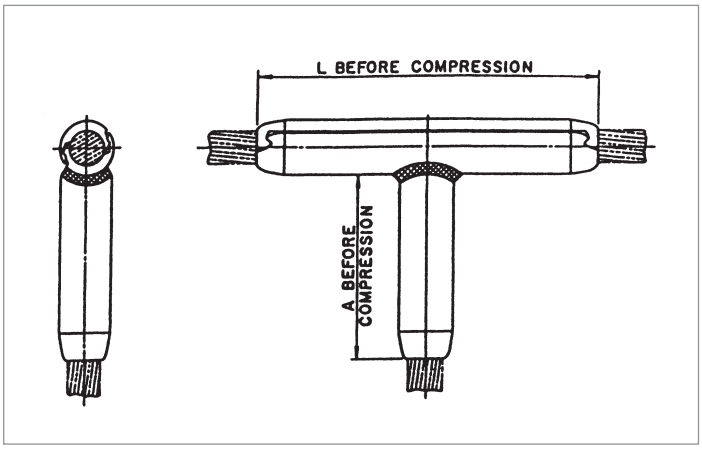
Quick Compress Tee Connector for ACSR Conductor, Open Run, TTOC Series



Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Example:

A tee connector for 795 Drake, the complete catalog number is:

TTOC12

The TTOC Series Open Run Tee Connector is a permanent drop specifically desgined for ACSR, AAC, AAAC and ACAR conductors.

The end tapers of all compression accessories are supplied with a high voltage finish for die size sections 12CD and above.

Notes:

1. Tee Connectors are not prefilled with AFC.
2. Installation Instructions for Tee Connectors are on page 274.
3. For more information on die selection and ordering instructions, see Tools and Equipment tab in this catalog.

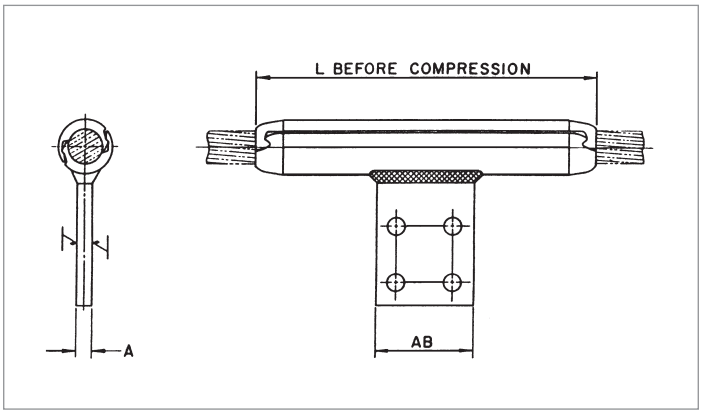
Quick Compress Tee Tap for ACSR Conductor, Open Run, TTOP Series



The TTOP Series Open Run Tee Tap is a permanent or temporary drop. By using a high strength alloy, the compression length has been shortened for less compression bites.

The run portion incorporates an improved design of interlocking extrusions, providing a permanent grip on the conductor when compressed.

The end tapers of all compression accessories are supplied with a High Voltage finish for die size sections 12CD and above.

The square edges of bolted pads of the compression accessories could cause Corona. Pads with edges and corners rounded can be supplied by adding the catalog suffix 'EHV'.

Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Step 2: Extra High Voltage Finish

For Extra High Voltage Finish, use 'EHV'. (≥ 345 kV)

For Standard Finish, leave blank. (< 345 kV)

Step 3: Assemble Catalog Number.

Assy Catalog Number + **EHV Finish**

Example:

A tee tap for 795 Drake with EHV finish, the complete catalog number is:

TTOP12EHV

Notes:

1. Installation Instructions for Tee Taps are on page 274.
2. For more information on die selection and ordering instructions, see Tools and Equipment tab in this catalog.

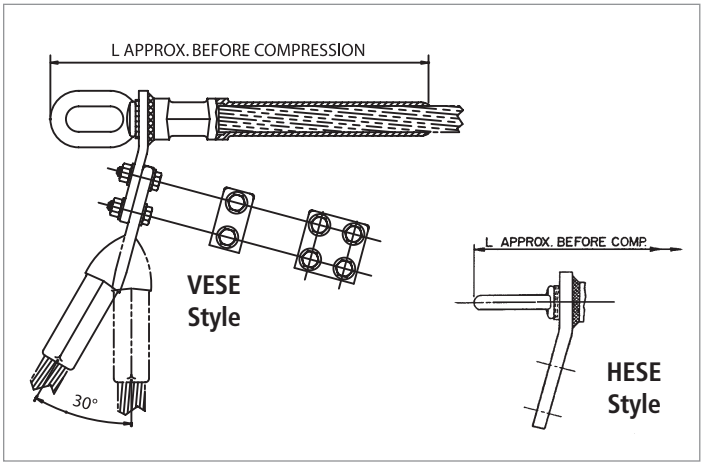
Quick Compress Dead Ends for AAC Conductor, Eye Type, Single Tongue, VESE/HESE Series



The Quick Compress Dead Ends are designed for fast and easy installation. By using a high strength alloy, the compression length has been shortened for less compression bites while maintaining a minimum 95% of the ASTM rated strength. The steel eye is pre-compressed and the dead end pre-filled, eliminating installation steps.

The dead end tongue and terminal pad are each constructed with a 15° angle, which permits the terminal connector to be bolted in either the straight or the 30° position. Both sides of the pad are finished, creating excellent electrical contact surfaces. For pad to pad connections, AFL recommends the use of No. 2 EJC.

The end tapers of all compression accessories are supplied with a high voltage finish for die sizes 12CD and above. Corona bolts are furnished standard on 15° terminals for these section sizes.

The square edges of bolted pads of the compression accessories could cause Corona. Pads with rounded edges and corners can be supplied by adding the catalog suffix 'EHV'.

Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Step 2: Terminal Connector

For an assembly without a terminal connector, use 'NT'.
For an assembly with a terminal connector, leave blank.

Step 3: Extra High Voltage Finish

For Extra High Voltage Finish, use 'EHV'. (≥ 345 kV)
For Standard Finish, leave blank. (< 345 kV)

Step 4: Assemble Catalog Number.

Assy Catalog Number + **Terminal Connector** + **EHV Finish**

Example:

For a vertical eye dead end with no terminal and EHV finish for 795 Arbutus, the complete catalog number is:

VESE110NTEHV

Notes:

1. Assembly Catalog Number includes dead end, terminal connector and aluminum hardware.
2. Eye Dimensions are on page 257.
3. Pad Dimensions are on page 257.
4. Installation Instructions for Dead Ends are on page 266.
5. Installation Instructions for Terminals are on page 272.
6. For more information on die selection and ordering instructions, see Tools and Equipment tab in this catalog.

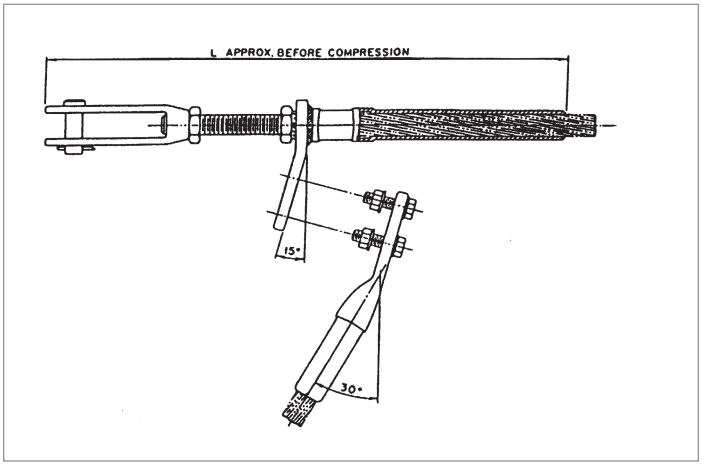
Quick Compress Dead Ends for AAC Conductor, Adjustable Clevis Type, Single Tongue, ACSE Series



The Quick Compress Dead Ends are designed for fast and easy installation. By using a high strength alloy, the compression length has been shortened for less compression bites while maintaining a minimum 95% of the ASTM rated strength. The adjustable steel clevis is pre-compressed and the dead end pre-filled, eliminating installation steps.

The dead end tongue and terminal pad are each constructed with a 15° angle, which permits the terminal connector to be bolted in either the straight or the 30° position. Both sides of the pad are finished, creating excellent electrical contact surfaces. For pad to pad connections, AFL recommends the use of No. 2 EJC.

The end tapers of all compression accessories are supplied with a high voltage finish for die sizes 12CD and above. Corona bolts are furnished standard on 15° terminals for these section sizes.
The square edges of bolted pads of the compression accessories could cause Corona. Pads with rounded edges and corners can be supplied by adding the catalog suffix 'EHV'.

Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Step 2: Terminal Connector

For an assembly without a terminal connector, use 'NT'.
For an assembly with a terminal connector, leave blank.

Step 3: Extra High Voltage Finish

For Extra High Voltage Finish, use 'EHV'. (≥ 345 kV)
For Standard Finish, leave blank. (< 345 kV)

Step 4: Assemble Catalog Number.

Assy Catalog Number + **Terminal Connector** + **EHV Finish**

Example:

For an adjustable clevis dead end with no terminal and EHV finish for 795 Arbutus, the complete catalog number is:

ACSE110NTEHV

Notes:

1. Assembly Catalog Number includes dead end, terminal connector and aluminum hardware.
2. Clevis Dimensions are on page 258.
3. Pad Dimensions are on page 257.
4. Installation Instructions for Dead Ends are on page 266.
5. Installation Instructions for Terminals are on page 272.
6. For more information on die selection and ordering instructions, see Tools and Equipment tab in this catalog.

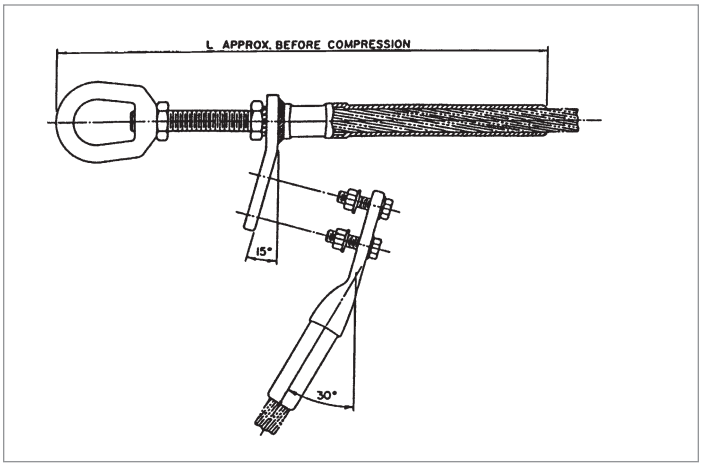
Quick Compress Dead Ends for AAC Conductor, Adjustable Eye Type, Single Tongue, AESE Series



The Quick Compress Dead Ends are designed for fast and easy installation. By using a high strength alloy, the compression length has been shortened for less compression bites while maintaining a minimum 95% of the ASTM rated strength. The adjustable steel eye is pre-compressed and the dead end pre-filled, eliminating installation steps.

The dead end tongue and terminal pad are each constructed with a 15° angle, which permits the terminal connector to be bolted in either the straight or the 30° position. Both sides of the pad are finished, creating excellent electrical contact surfaces. For pad to pad connections, AFL recommends the use of No. 2 EJC.

The end tapers of all compression accessories are supplied with a high voltage finish for die sizes 12CD and above. Corona bolts are furnished standard on 15° terminals for these section sizes.
The square edges of bolted pads of the compression accessories could cause Corona. Pads with rounded edges and corners can be supplied by adding the catalog suffix 'EHV'.

Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Step 2: Terminal Connector

For an assembly without a terminal connector, use 'NT'.
For an assembly with a terminal connector, leave blank.

Step 3: Extra High Voltage Finish

For Extra High Voltage Finish, use 'EHV'. (≥ 345 kV)
For Standard Finish, leave blank. (< 345 kV)

Step 4: Assemble Catalog Number.

Assy Catalog Number + **Terminal Connector** + **EHV Finish**

Example:

For an adjustable eye dead end with no terminal and EHV finish for 795 Arbutus, the complete catalog number is:

AESE110NTEHV

Notes:

1. Assembly Catalog Number includes dead end, terminal connector and aluminum hardware.
2. Eye Dimensions are on page 258.
3. Pad Dimensions are on page 257.
4. Installation Instructions for Dead Ends are on page 266.
5. Installation Instructions for Terminals are on page 272.
6. For more information on die selection and ordering instructions, see Tools and Equipment tab in this catalog.

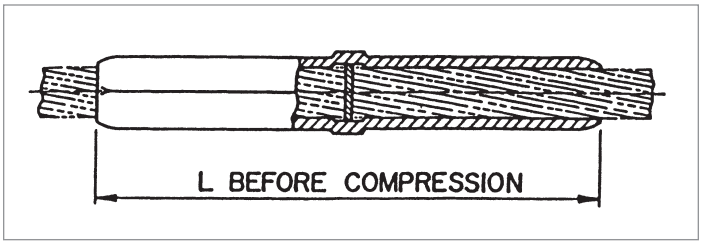
Quick Compress Compression Joints for AAC Conductor, CJE Series



The Quick Compress CJE Series Joints are designed for fast and easy installation. By using a high strength alloy, the compression length has been shortened for less compression bites while maintaining a minimum 95% of the ASTM rated strength. The compression joint is pre-filled, eliminating an installation step. Each compression joint has a center stop to ensure proper insertion of the conductor.

The end tapers of all compression accessories are supplied with a high voltage finish for die size sections 12CD and above.

Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Example:

A compression joint for 795 Arbutus conductor, the complete catalog number is:

CJE11

Notes:

1. Installation Instructions for Compression Joints are on page 268.
2. For more information on die selection and ordering instructions, see Tools and Equipment tab in this catalog.

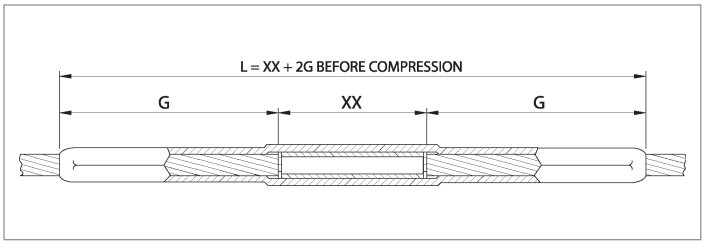
Quick Compress Replacement Compression Joints for AAC Conductor, CJER Series



The Quick Compress Replacement Joints are used to replace damaged conductor in midspan. They are designed for fast and easy installation. By using a high strength alloy, the compression length has been shortened for less compression bites, while maintaining a minimum 95% of the ASTM rated strength. The replacement joint is pre-filled, eliminating an installation step.

The end tapers of all compression accessories are supplied with a high voltage finish for die size sections 12CD and above.

Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Step 2: Determine Length of Conductor Removed (XX)

Determine the length of conductor (XX) that will be cut out, to the nearest inch (Maximum 48").

Step 3: Assemble Catalog Number

Catalog Number + **Removed Conductor Length (XX)**

Example:

A replacement compression joint for 795 Arbutus conductor with a removed conductor length of 24 inches, the complete catalog number is:

CJE110R24

Notes:

1. Installation Instructions for Compression Joints are on page 268.
2. For more information on die selection and ordering instructions, see Tools and Equipment tab in this catalog.

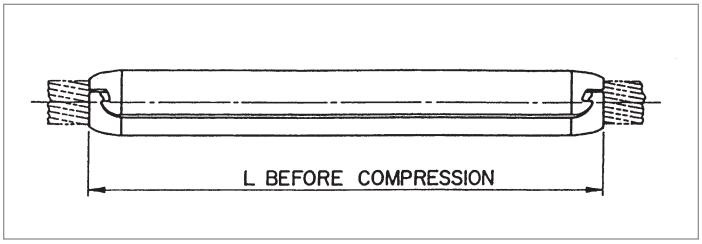
Quick Compress Repair Sleeve for AAC Conductor, RS Series



The Quick Compress Repair Sleeve is designed for ACSR, AAC, AAAC and ACAR conductors. The repair sleeve incorporates an improved design of interlocking extrusions, providing a permanent grip on the conductor when compressed.

The repair sleeve will restore the conductor to 95% of its ASTM rated strength where up to one-third of the aluminum strands are damaged.

Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Example:

A repair sleeve for 795 Arbutus conductor, the complete catalog number is:

RS11

Notes:

1. Installation Instructions for Compression Joints are on page 270.
2. For more information on die selection and ordering instructions, see the AFL Tool Catalog.

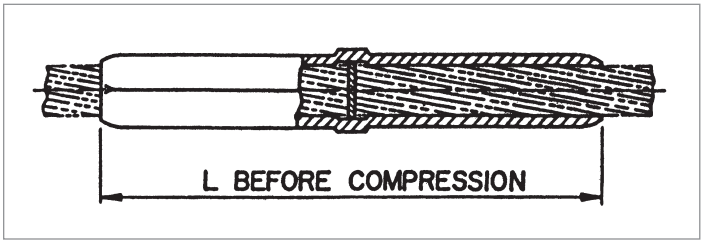
Quick Compress Jumper Connector for AAC Conductor, JC Series



The Quick Compress Jumper Connector is designed for fast and easy installation. By using a high strength alloy, the compression length has been shortened for less compression bites. The jumper connector is pre-filled, eliminating an installation step. Each jumper connector has a center stop, making it easy to center the jumper on the conductor.

All Quick Compress Jumper Connectors are designed for limited tension use, maintaining a minimum of 40% of the ASTM rated strength of the conductor.

The end tapers of all compression accessories are supplied with a High Voltage finish for die size sections 12CD and above.

Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Example:

A jumper connector for 795 Arbutus conductor, the complete catalog number is:

JC11

Notes:

1. Installation Instructions for Jumpers are on page 271.
2. For more information on die selection and ordering instructions, see Tools and Equipment tab in this catalog.

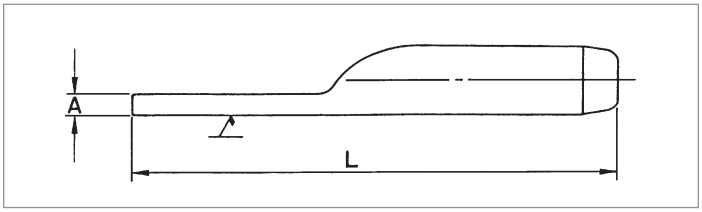
Quick Compress Terminal for AAC Conductor, Straight, TS Series



The TS Series Straight Terminal Connector is designed for fast and easy installation. By using a high strength alloy, the compression length has been shortened for less compression bites. The terminal connector is pre-filled, eliminating an installation step.

All TS Series connectors are designed for limited tension use, maintaining a minimum of 40% of the ASTM rated strength of the conductor.

The end tapers of all compression accessories are supplied with a High Voltage finish for die size sections 12CD and above.

The square edges of bolted pads of the compression accessories could cause Corona. Pads with edges and corners rounded can be supplied by adding the catalog suffix 'EHV'.

Ordering Instructions

Step 1: Catalog Number

Determine the catalog number based on the conductor being used.

Step 2: Extra High Voltage Finish

For Extra High Voltage Finish, use 'EHV'. (≥ 345 kV)
For Standard Finish, leave blank. (< 345 kV)

Step 3: Assemble Catalog Number.

Catalog Number + **EHV Finish**

Example:

A straight terminal for 795 Arbutus with an EHV finish, the complete catalog number is:

TS11EHV

Notes:
1. Pad Dimensions are on page 257.
2. Installation Instructions for Terminals are on page 272.
3. Bolts, nuts and washers are not supplied with TS Series Terminal Connectors.
4. For more information on die selection and ordering instructions, see Tools and Equipment tab in this catalog.

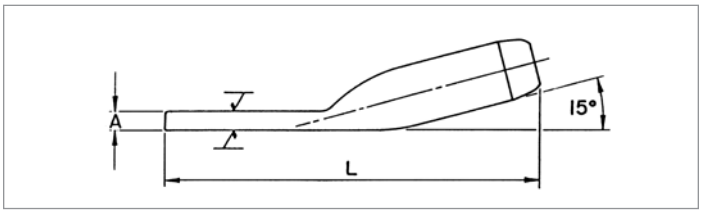
Quick Compress Terminal for AAC Conductor, 15°, TF Series



The TF Series 15° Terminal Connector is designed for fast and easy installation. By using a high strength alloy, the compression length has been shortened for less compression bites. The terminal connector is pre-filled, eliminating an installation step.

When used with the Quick Compress dead end, the TF Series connectors can be bolted in either straight or 30° position. All TF Series connectors are designed for limited tension use, maintaining a minimum of 40% of the ASTM rated strength of the conductor.

The end tapers of all compression accessories are supplied with a High Voltage finish for die size sections 12CD and above.
The square edges of bolted pads of the compression accessories could cause Corona. Pads with edges and corners rounded can be supplied by adding the catalog suffix 'EHV'.

Ordering Instructions

Step 1: Catalog Number

Determine the catalog number based on the conductor being used.

Step 2: Extra High Voltage Finish

For Extra High Voltage Finish, use 'EHV'. (≥ 345 kV)
For Standard Finish, leave blank. (< 345 kV)

Step 3: Assemble Catalog Number.

Catalog Number + **EHV Finish**

Example:

A 15° terminal for 795 Arbutus with an EHV finish, the complete catalog number is:

TF11EHV

Notes:
1. Pad Dimensions are on page 257.
2. Installation Instructions for Terminals are on page 272.
3. Bolts, nuts and washers are supplied with TF Series Terminal Connectors.
4. For more information on die selection and ordering instructions, see Tools and Equipment tab in this catalog.

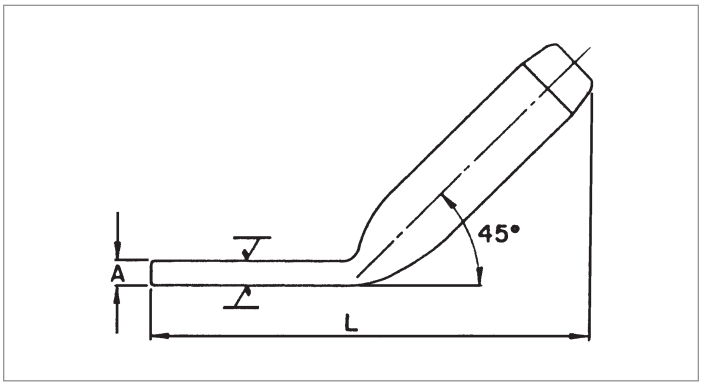
Quick Compress Terminal for AAC Conductor, 45°, T45 Series



The T45 Series 45° Terminal Connector is designed for fast and easy installation. By using a high strength alloy, the compression length has been shortened for less compression bites. The terminal connector is pre-filled, eliminating an installation step.

All T45 Series connectors are designed for limited tension use, maintaining a minimum of 40% of the ASTM rated strength of the conductor.

The end tapers of all compression accessories are supplied with a High Voltage finish for die size sections 12CD and above.

The square edges of bolted pads of the compression accessories could cause Corona. Pads with edges and corners rounded can be supplied by adding the catalog suffix 'EHV'.

Ordering Instructions

Step 1: Catalog Number

Determine the catalog number based on the conductor being used.

Step 2: Extra High Voltage Finish

For Extra High Voltage Finish, use 'EHV'. (≥ 345 kV)

For Standard Finish, leave blank. (< 345 kV)

Step 3: Assemble Catalog Number.

Catalog Number + **EHV Finish**

Example:

A 45° terminal for 795 Arbutus with an EHV finish, the complete catalog number is:

T4511EHV

Notes:

1. Pad Dimensions are on page 257.
2. Installation Instructions for Terminals are on page 272.
3. Bolts, nuts and washers are not supplied with T45 Series Terminal Connectors.
4. For more information on die selection and ordering instructions, see Tools and Equipment tab in this catalog.

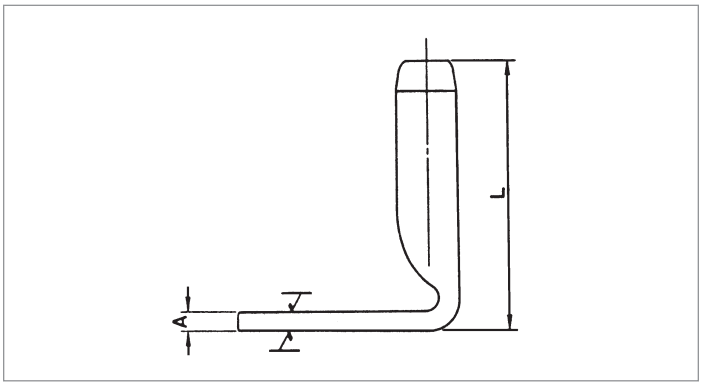
Quick Compress Terminal for AAC Conductor, 90º, TN Series



The TN Series 90º Terminal Connector is designed for fast and easy installation. By using a high strength alloy, the compression length has been shortened for less compression bites. The terminal connector is pre-filled, eliminating an installation step.

All TN Series connectors are designed for limited tension use, maintaining a minimum of 40% of the ASTM rated strength of the conductor.

The end tapers of all compression accessories are supplied with a High Voltage finish for die size sections 12CD and above.

The square edges of bolted pads of the compression accessories could cause Corona. Pads with edges and corners rounded can be supplied by adding the catalog suffix 'EHV'.

Ordering Instructions

Step 1: Catalog Number

Determine the catalog number based on the conductor being used.

Step 2: Extra High Voltage Finish

For Extra High Voltage Finish, use 'EHV'. (≥ 345 kV)

For Standard Finish, leave blank. (< 345 kV)

Step 3: Assemble Catalog Number.

Catalog Number + **EHV Finish**

Example:

A 90º terminal for 795 Arbutus with an EHV finish, the complete catalog number is:

TN11EHV

Notes:

1. Pad Dimensions are on page 257.
2. Installation Instructions for Terminals are on page 272.
3. Bolts, nuts and washers are not supplied with TN Series Terminal Connectors.
4. For more information on die selection and ordering instructions, see Tools and Equipment tab in this catalog.

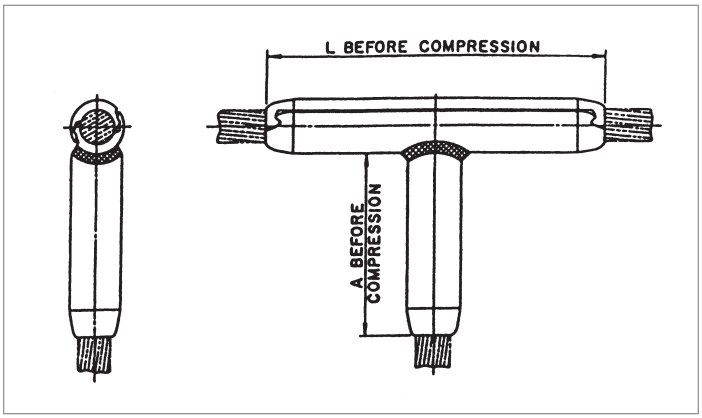
Quick Compress Tee Connector for AAC Conductor, Open Run, TTOC Series



Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Example:

A tee connector for 795 Arbutus, the complete catalog number is:

TTOC11

The TTOC Series Open Run Tee Connector is a permanent drop specifically desgined for ACSR, AAC, AAAC and ACAR conductors.

The end tapers of all compression accessories are supplied with a high voltage finish for die size sections 12CD and above.

Notes:

1. Tee Connectors are not prefilled with AFC.
2. Installation Instructions for Tee Connectors are on page 274.
3. For more information on die selection and ordering instructions, see Tools and Equipment tab in this catalog.

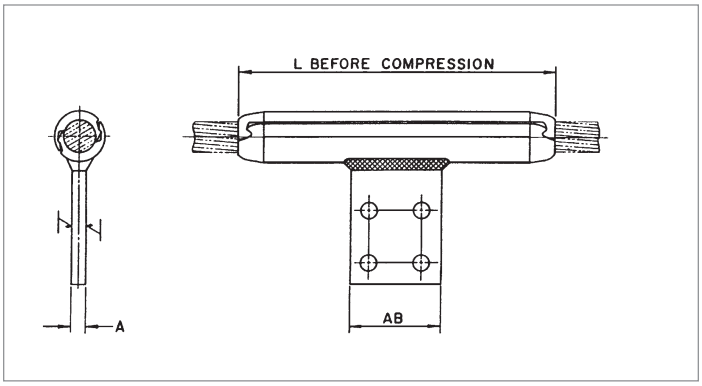
Quick Compress Tee Tap for AAC Conductor, Open Run, TTOP Series



The TTOP Series Open Run Tee Tap is a permanent or temporary drop. By using a high strength alloy, the compression length has been shortened for less compression bites.

The run portion incorporates an improved design of interlocking extrusions, providing a permanent grip on the conductor when compressed.

The end tapers of all compression accessories are supplied with a High Voltage finish for die size sections 12CD and above.

The square edges of bolted pads of the compression accessories could cause Corona. Pads with edges and corners rounded can be supplied by adding the catalog suffix 'EHV'.

Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Step 2: Extra High Voltage Finish

For Extra High Voltage Finish, use 'EHV'. (≥ 345 kV)
For Standard Finish, leave blank. (< 345 kV)

Step 3: Assemble Catalog Number.

Assy Catalog Number + **EHV Finish**

Example:

A tee tap for 795 Arbutus with EHV finish, the complete catalog number is:

TTOP11EHV

Notes:

1. Installation Instructions for Tee Taps are on page 274.
2. For more information on die selection and ordering instructions, see Tools and Equipment tab in this catalog.

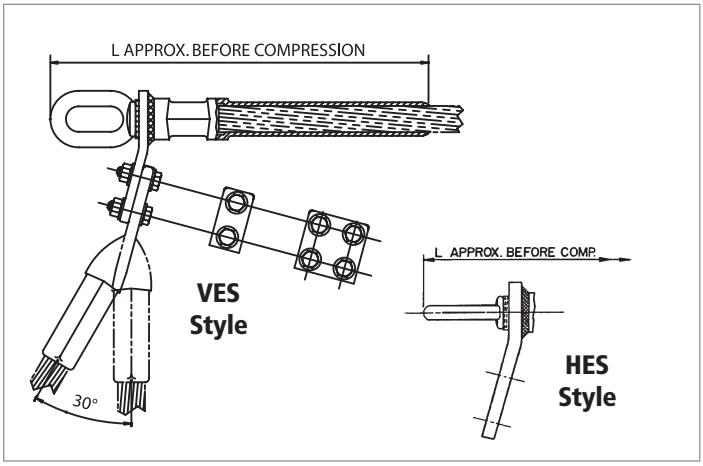
Quick Compress Dead Ends for AAAC and ACAR Conductor, Eye Type, Single Tongue, VES/HES Series



The Quick Compress Dead Ends are designed for fast and easy installation. By using a high strength alloy, the compression length has been shortened for less compression bites while maintaining a minimum 95% of the ASTM rated strength. The steel eye is pre-compressed and the dead end pre-filled, eliminating installation steps.

The dead end tongue and terminal pad are each constructed with a 15° angle, which permits the terminal connector to be bolted in either the straight or the 30° position. Both sides of the pad are finished, creating excellent electrical contact surfaces. For pad to pad connections, AFL recommends the use of No. 2 EJC.

The end tapers of all compression accessories are supplied with a high voltage finish for die sizes 12CD and above. Corona bolts are furnished standard on 15° terminals for these section sizes.
The square edges of bolted pads of the compression accessories could cause Corona. Pads with rounded edges and corners can be supplied by adding the catalog suffix 'EHV'.

Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Step 2: Terminal Connector

For an assembly without a terminal connector, use 'NT'.
For an assembly with a terminal connector, leave blank.

Step 3: Extra High Voltage Finish

For Extra High Voltage Finish, use 'EHV'. (≥ 345 kV)
For Standard Finish, leave blank. (< 345 kV).

Step 4: Assemble Catalog Number.

Assy Catalog Number + **Terminal Connector** + **EHV Finish**

Example:

For a vertical eye dead end with no terminal and EHV finish for 927.2 Greeley, the complete catalog number is:

VES120NTEHV

Notes:

1. Assembly Catalog Number includes dead end, terminal connector and aluminum hardware.
2. Eye Dimensions are on page 257.
3. Pad Dimensions are on page 257.
4. Installation Instructions for Dead Ends are on page 266.
5. Installation Instructions for Terminals are on page 272.
6. For more information on die selection and ordering instructions, see Tools and Equipment tab in this catalog.

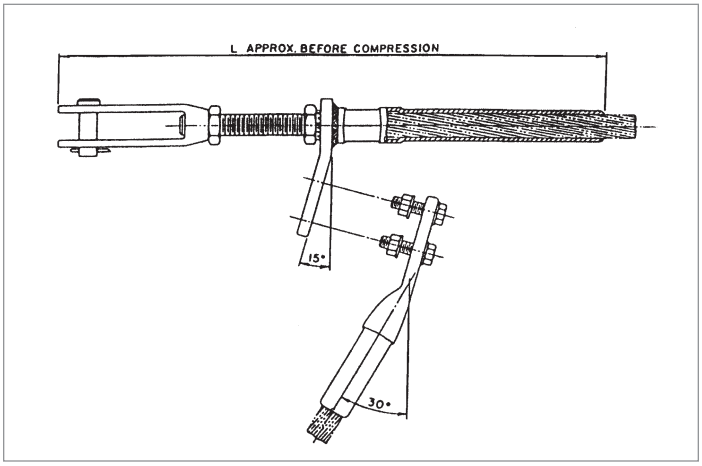
Quick Compress Dead Ends for AAAC and ACAR Conductor, Adjustable Clevis Type, Single Tongue, ACS Series



The Quick Compress Dead Ends are designed for fast and easy installation. By using a high strength alloy, the compression length has been shortened for less compression bites while maintaining a minimum 95% of the ASTM rated strength. The adjustable steel clevis is pre-compressed and the dead end pre-filled, eliminating installation steps.

The dead end tongue and terminal pad are each constructed with a 15° angle, which permits the terminal connector to be bolted in either the straight or the 30° position. Both sides of the pad are finished, creating excellent electrical contact surfaces. For pad to pad connections, AFL recommends the use of No. 2 EJC.

The end tapers of all compression accessories are supplied with a high voltage finish for die sizes 12CD and above. Corona bolts are furnished standard on 15° terminals for these section sizes.
The square edges of bolted pads of the compression accessories could cause Corona. Pads with rounded edges and corners can be supplied by adding the catalog suffix 'EHV'.

Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Step 2: Terminal Connector

For an assembly without a terminal connector, use 'NT'.
For an assembly with a terminal connector, leave blank.

Step 3: Extra High Voltage Finish

For Extra High Voltage Finish, use 'EHV'. (≥ 345 kV)
For Standard Finish, leave blank. (< 345 kV)

Step 4: Assemble Catalog Number.

Assy Catalog Number + **Terminal Connector** + **EHV Finish**

Example:

For an adjustable clevis dead end with no terminal and EHV finish for 927.2 Greeley, the complete catalog number is:

ACS120NTEHV

Notes:

1. Assembly Catalog Number includes dead end, terminal connector and aluminum hardware.
2. Clevis Dimensions are on page 258.
3. Pad Dimensions are on page 257.
4. Installation Instructions for Dead Ends are on page 266.
5. Installation Instructions for Terminals are on page 272.

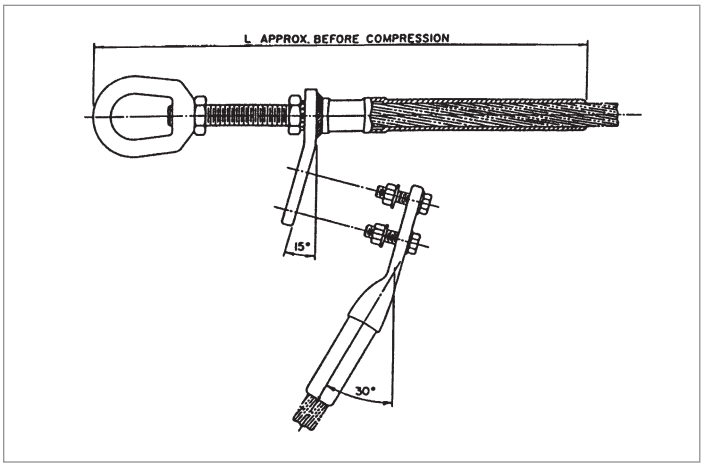
Quick Compress Dead Ends for AAAC and ACAR Conductor, Adjustable Eye Type, Single Tongue, AES Series



The Quick Compress Dead Ends are designed for fast and easy installation. By using a high strength alloy, the compression length has been shortened for less compression bites while maintaining a minimum 95% of the ASTM rated strength. The adjustable steel eye is pre-compressed and the dead end pre-filled, eliminating installation steps.

The dead end tongue and terminal pad are each constructed with a 15° angle, which permits the terminal connector to be bolted in either the straight or the 30° position. Both sides of the pad are finished, creating excellent electrical contact surfaces. For pad to pad connections, AFL recommends the use of No. 2 EJC.

The end tapers of the compression portions of all compression accessories are supplied with a High Voltage finish for die size sections 12CD and above. Corona bolts are furnished standard on 15° terminals for these section sizes.

The square edges of bolted pads of the compression accessories could cause Corona. Pads with edges and corners rounded can be supplied by adding the catalog suffix 'EHV'.

Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Step 2: Terminal Connector

For an assembly without a terminal connector, use 'NT'.
For an assembly with a terminal connector, leave blank.

Step 3: Extra High Voltage Finish

For Extra High Voltage Finish, use 'EHV'. (≥ 345 kV)
For Standard Finish, leave blank. (< 345 kV)

Step 4: Assemble Catalog Number.

Assy Catalog Number + **Terminal Connector** + **EHV Finish**

Example:

For an adjustable eye dead end with no terminal and EHV finish for 927.7 Greeley, the complete catalog number is:

AES120NTEHV

Notes:

1. Assembly Catalog Number includes dead end, terminal connector and aluminum hardware.
2. Eye Dimensions are on page 258.
3. Pad Dimensions are on page 257.
4. Installation Instructions for Dead Ends are on page 266.
5. Installation Instructions for Terminals are on page 272.
6. For more information on die selection and ordering instructions, see Tools and Equipment tab in this catalog.

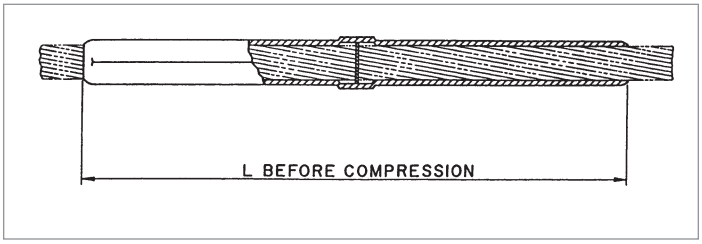
Quick Compress Compression Joints for AAAC Conductor, CJ Series



The Quick Compress CJ Series Joints are designed for fast and easy installation. By using a high strength alloy, the compression length has been shortened for less compression bites while maintaining a minimum 95% of the ASTM rated strength. The compression joint is pre-filled, eliminating an installation step. Each compression joint has a center stop to ensure proper insertion of the conductor.

The end tapers of all compression accessories are supplied with a high voltage finish for die size sections 12CD and above.

Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Example:

A compression joint for 312.8 Butte conductor, the complete catalog number is:

CJ07

Notes:

1. Installation Instructions for Compression Joints are on page 268.
2. For more information on die selection and ordering instructions, see Tools and Equipment tab in this catalog.

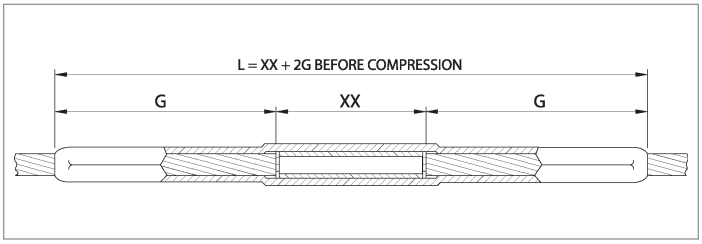
Quick Compress Replacement Compression Joints for AAAC and ACAR Conductor, CJR Series



The Quick Compress Replacement Joints are used to replace damaged conductor in midspan. They are designed for fast and easy installation. By using a high strength alloy, the compression length has been shortened for less compression bits, while maintaining a minimum 95% of the ASTM rated strength. The replacement joint is pre-filled, eliminating an installation step.

The end tapers of all compression accessories are supplied with a high voltage finish for die size sections 12CD and above.

Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Step 2: Determine Length of Conductor Removed (XX)

Determine the length of conductor (XX) that will be cut out, to the nearest inch (Maximum 48").

Step 3: Assemble Catalog Number

Catalog Number + **Removed Conductor Length (XX)**

Example:

A replacement compression joint for 312.8 Butte conductor with a removed conductor length of 24 inches, the complete catalog number is:

CJ070R24

Notes:

1. Installation Instructions for Compression Joints are on page 268.
2. For more information on die selection and ordering instructions, see Tools and Equipment tab in this catalog.

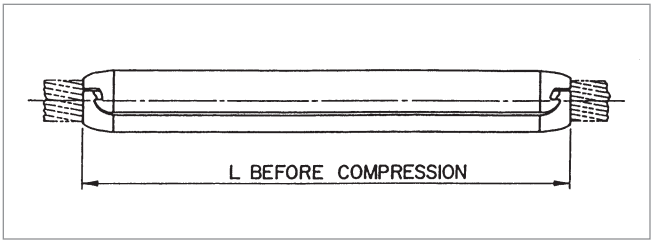
Quick Compress Repair Sleeve for AAAC and ACAR Conductor, RS Series



The Quick Compress Repair Sleeve is designed for ACSR, AAC, AAAC and ACAR conductors. The repair sleeve incorporates an improved design of interlocking extrusions, providing a permanent grip on the conductor when compressed.

The repair sleeve will restore the conductor to 95% of its ASTM rated strength where up to one-third of the aluminum strands are damaged.

Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Example:

A repair sleeve for 927.7 Greeley conductor, the complete catalog number is:

RS11

Notes:

1. Installation Instructions for Compression Joints are on page 270.
2. For more information on die selection and ordering instructions, see the AFL Tool Catalog.

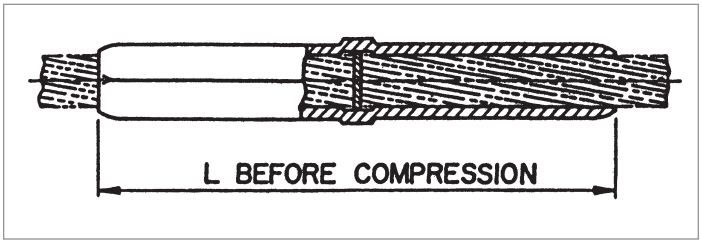
Quick Compress Jumper Connector for AAAC and ACAR Conductor, JC Series



The Quick Compress Jumper Connector is designed for fast and easy installation. By using a high strength alloy, the compression length has been shortened for less compression bites. The jumper connector is pre-filled, eliminating an installation step. Each jumper connector has a center stop, making it easy to center the jumper on the conductor.

All Quick Compress Jumper Connectors are designed for limited tension use, maintaining a minimum of 40% of the ASTM rated strength of the conductor.

The end tapers of all compression accessories are supplied with a High Voltage finish for die size sections 12CD and above.

Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Example:

A jumper connector for 927.2 Greeley conductor, the complete catalog number is:

JC12

Notes:

1. Installation Instructions for Compression Joints are on page 271.
2. For more information on die selection and ordering instructions, see Tools and Equipment tab in this catalog.

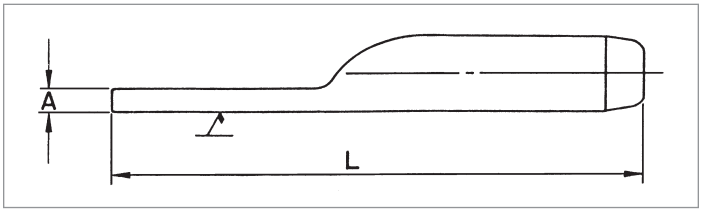
Quick Compress Terminal for AAAC and ACAR Conductor, Straight, TS Series



The TS Series Straight Terminal Connector is designed for fast and easy installation. By using a high strength alloy, the compression length has been shortened for less compression bites. The terminal connector is pre-filled, eliminating an installation step.

All TS Series connectors are designed for limited tension use, maintaining a minimum of 40% of the ASTM rated strength of the conductor.

The end tapers of all compression accessories are supplied with a High Voltage finish for die size sections 12CD and above.

The square edges of bolted pads of the compression accessories could cause Corona. Pads with edges and corners rounded can be supplied by adding the catalog suffix 'EHV'.

Ordering Instructions

Step 1: Catalog Number

Determine the catalog number based on the conductor being used.

Step 2: Extra High Voltage Finish

For Extra High Voltage Finish, use 'EHV'. (≥ 345 kV)

For Standard Finish, leave blank. (< 345 kV)

Step 3: Assemble Catalog Number.

Catalog Number	+	EHV Finish

Example:

A straight terminal for 927.7 Greeley with an EHV finish, the complete catalog number is:

TS12EHV

Notes:

1. Pad Dimensions are on page 257.
2. Installation Instructions for Terminals are on page 272.
3. Bolts, nuts and washers are not supplied with TS Series Terminal Connectors.
4. For more information on die selection and ordering instructions, see Tools and Equipment tab in this catalog.

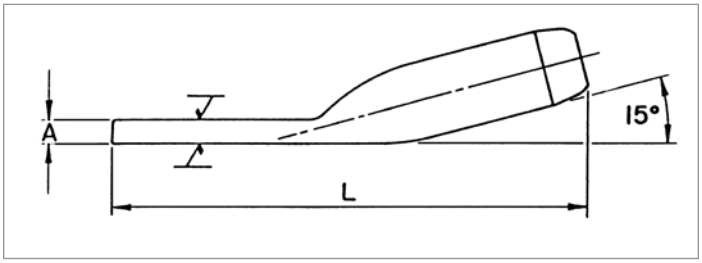
Quick Compress Terminal for AAAC and ACAR Conductor, 15º, TF Series



The TF Series 15º Terminal Connector is designed for fast and easy installation. By using a high strength alloy, the compression length has been shortened for less compression bites. The terminal connector is pre-filled, eliminating an installation step.

When used with the Quick Compress dead end, the TF Series connectors can be bolted in either straight or 30º position. All TF Series connectors are designed for limited tension use, maintaining a minimum of 40% of the ASTM rated strength of the conductor.

The end tapers of all compression accessories are supplied with a High Voltage finish for die size sections 12CD and above.

The square edges of bolted pads of the compression accessories could cause Corona. Pads with edges and corners rounded can be supplied by adding the catalog suffix 'EHV'.

Ordering Instructions

Step 1: Catalog Number

Determine the catalog number based on the conductor being used.

Step 2: Extra High Voltage Finish

For Extra High Voltage Finish, use 'EHV'. (≥ 345 kV)

For Standard Finish, leave blank. (< 345 kV)

Step 3: Assemble Catalog Number.

Catalog Number	+	EHV Finish

Example:

A 15º terminal for 927.7 Greeley with an EHV finish, the complete catalog number is:

TF12EHV

Notes:

1. Pad Dimensions are on page 257.
2. Installation Instructions for Terminals are on page 272.
3. Bolts, nuts and washers are supplied with TF Series Terminal Connectors.
4. For more information on die selection and ordering instructions, see Tools and Equipment tab in this catalog.

Quick Compress Terminal for AAAC and ACAR Conductor, 15°, TF Series (cont.)

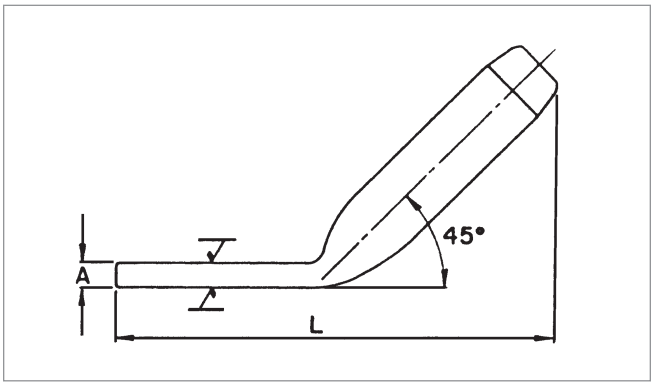
Quick Compress Terminal for AAAC and ACAR Conductor, 45º, T45 Series



The T45 Series 45º Terminal Connector is designed for fast and easy installation. By using a high strength alloy, the compression length has been shortened for less compression bites. The terminal connector is pre-filled, eliminating an installation step.

All T45 Series connectors are designed for limited tension use, maintaining a minimum of 40% of the ASTM rated strength of the conductor.

The end tapers of all compression accessories are supplied with a High Voltage finish for die size sections 12CD and above.

The square edges of bolted pads of the compression accessories could cause Corona. Pads with edges and corners rounded can be supplied by adding the catalog suffix 'EHV'.

Ordering Instructions

Step 1: Catalog Number

Determine the catalog number based on the conductor being used.

Step 2: Extra High Voltage Finish

For Extra High Voltage Finish, use 'EHV'. (≥ 345 kV)

For Standard Finish, leave blank. (< 345 kV)

Step 3: Assemble Catalog Number.

Catalog Number	+	EHV Finish

Example:

A 45º terminal for 927.7 Greeley with an EHV finish, the complete catalog number is:

T4512EHV

Notes:

1. Pad Dimensions are on page 257.
2. Installation Instructions for Terminals are on page 272.
3. Bolts, nuts and washers are not supplied with T45 Series Terminal Connectors.
4. For more information on die selection and ordering instructions, see Tools and Equipment tab in this catalog.

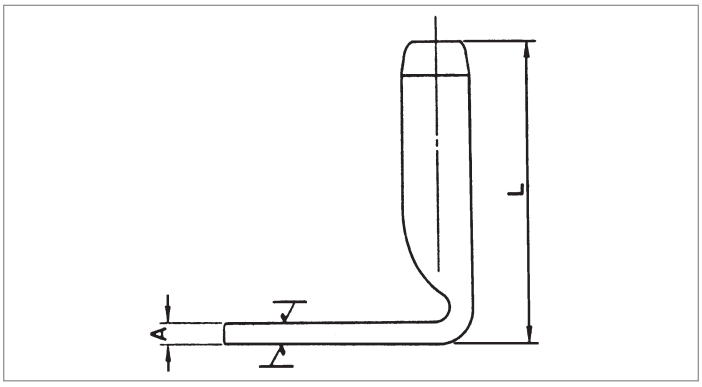
Quick Compress Terminal for AAAC and ACAR Conductor, 90º, TN Series



The TN Series 90º Terminal Connector is designed for fast and easy installation. By using a high strength alloy, the compression length has been shortened for less compression bites. The terminal connector is pre-filled, eliminating an installation step.

All TN Series connectors are designed for limited tension use, maintaining a minimum of 40% of the ASTM rated strength of the conductor.

The end tapers of all compression accessories are supplied with a High Voltage finish for die size sections 12CD and above.

The square edges of bolted pads of the compression accessories could cause Corona. Pads with edges and corners rounded can be supplied by adding the catalog suffix 'EHV'.

Ordering Instructions

Step 1: Catalog Number

Determine the catalog number based on the conductor being used.

Step 2: Extra High Voltage Finish

For Extra High Voltage Finish, use 'EHV'. (≥ 345 kV)

For Standard Finish, leave blank. (< 345 kV)

Step 3: Assemble Catalog Number.

Catalog Number	+	EHV Finish

Example:

A 90º terminal for 927.7 Greeley with an EHV finish, the complete catalog number is:

TN12EHV

Notes:

1. Pad Dimensions are on page 257.
2. Installation Instructions for Terminals are on page 272.
3. Bolts, nuts and washers are not supplied with TN Series Terminal Connectors.
4. For more information on die selection and ordering instructions, see Tools and Equipment tab in this catalog.

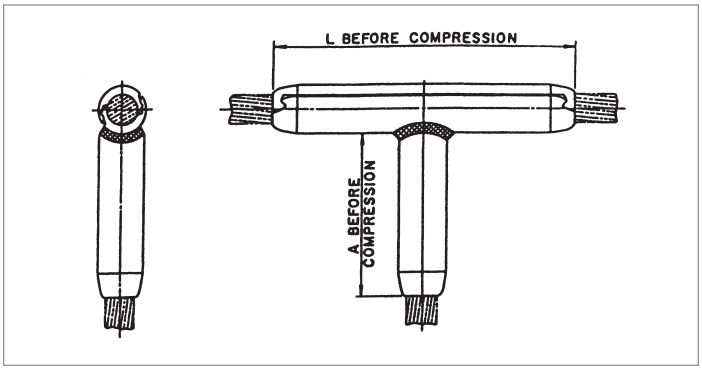
Quick Compress Tee Connector for AAAC and ACAR Conductor, Open Run, TTOC Series



Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Example:

A tee connector for 927.7 Greeley, the complete catalog number is:

TTOC12

The TTOC Series Open Run Tee Connector is a permanent drop specifically desgined for ACSR, AAC, AAAC and ACAR conductors.

The end tapers of all compression accessories are supplied with a high voltage finish for die size sections 12CD and above.

Notes:

1. Tee Connectors are not prefilled with AFC.
2. Installation Instructions for Tee Connectors are on page 274.
3. For more information on die selection and ordering instructions, see Tools and Equipment tab in this catalog.

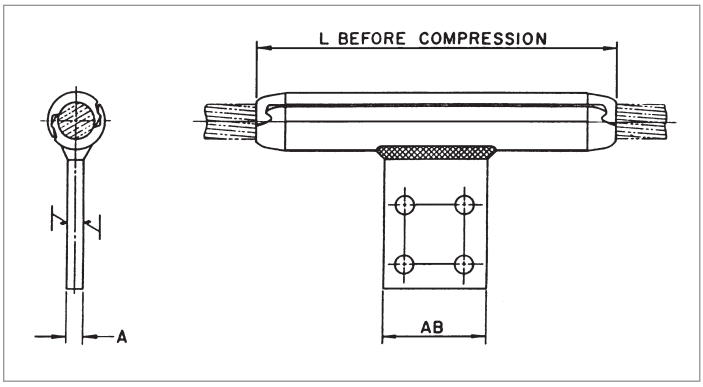
Quick Compress Tee Tap for AAAC and ACAR Conductor, Open Run, TTOP Series



The TTOP Series Open Run Tee Tap is a permanent or temporary drop. By using a high strength alloy, the compression length has been shortened for less compression bites.

The run portion incorporates an improved design of interlocking extrusions, providing a permanent grip on the conductor when compressed.

The end tapers of all compression accessories are supplied with a High Voltage finish for die size sections 12CD and above.

The square edges of bolted pads of the compression accessories could cause Corona. Pads with edges and corners rounded can be supplied by adding the catalog suffix 'EHV'.

Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Step 2: Extra High Voltage Finish

For Extra High Voltage Finish, use 'EHV'. (≥ 345 kV)
For Standard Finish, leave blank. (< 345 kV)

Step 3: Assemble Catalog Number.

Assy Catalog Number + **EHV Finish**

Example:

A tee tap for 927.7 Greeley with EHV finish, the complete catalog number is:

TTOP12EHV

Notes:
1. Installation Instructions for Tee Taps are on page 274.
2. For more information on die selection and ordering instructions, see Tools and Equipment tab in this catalog.

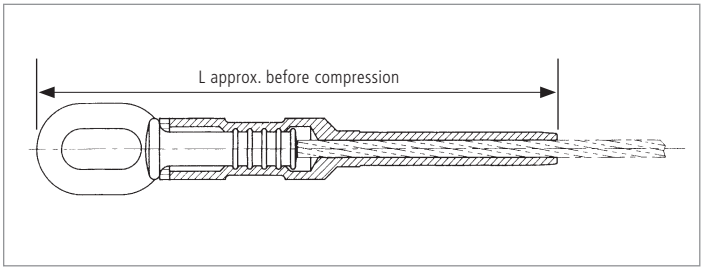
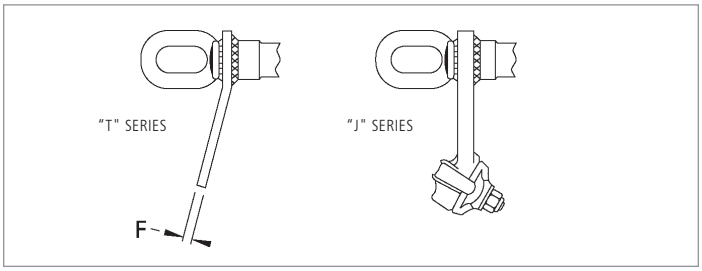
Quick Compress Dead Ends for Alumoweld® and Steel Ground Wire – GWDE Series





The Quick Compress GWDE Series Dead Ends are designed for fast and easy installation of Alumoweld® and Steel Ground Wire. By using a high strength alloy, the compression length has been shortened for less compression bites while maintaining a minimum of 95% of the ASTM rated strength. The steel eye is precompressed and the dead end is prefilled, eliminating installation steps.

Ordering Instructions

Step 1: Assembly Catalog Number
Determine the assembly catalog number based on the cable being used.

Step 2: Steel Eye Orientation
For an assembly with a vertical eye, use prefix 'V'.
For an assembly with a horizontal eye, use prefix 'H'.

Step 3: Tongue or Bolted Jumper
For an assembly with a tongue, use suffix 'T'.
For an assembly with a bolted jumper, use suffix 'J'.
For no tongue or bolted jumper, leave blank

Step 4: Assemble Catalog Number.

Eye Orientation	+	Catalog Number	+	Tongue or Bolted Jumper

Example:
For a vertical eye dead end with a bolted jumper for 7 No. 10 Alumoweld, the complete catalog number is:

VGWDE12.330J

Eye Orientation — Attachment Type

Notes:
1. For Alumoweld® wire spercifications, see the AFL Wire Products catalog.
2. Installation instructions for GW series dead ends are on page 267.
3. For more information on die selection and ordering instructions, see Tools and Equipment section in this catalog.

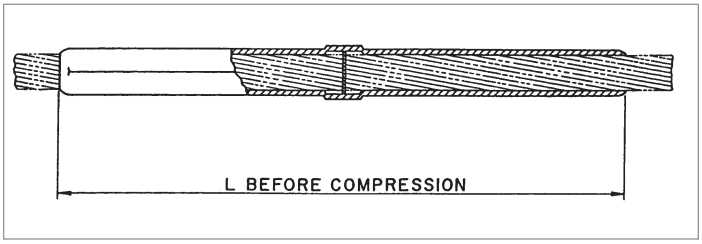
Quick Compress Compression Joints for Alumoweld® and Steel Ground Wire, GWJ Series



The Quick Compress GWJ Series Joints are designed for fast and easy installation of Alumoweld® and Steel Ground Wire. By using a high strength alloy, the compression length has been shortened for less compression bites while maintaining a minimum 95% of the ASTM rated strength. The compression joint is pre-filled, eliminating an installation step. Each compression joint has a center stop to ensure proper insertion of the conductor.

Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Example:

A compression joint for No. 10 Alumoweld®, the complete catalog number is:

GWJ12.330

Notes:

1. Installation Instructions for Compression Joints are on page 268.
2. For more information on die selection and ordering instructions, see Tools and Equipment section in this catalog.

Note:
Conductor temperature at 75°, ambient temperature 25°C, emissivity 0.5, wind 2 ft/sec, in sun.

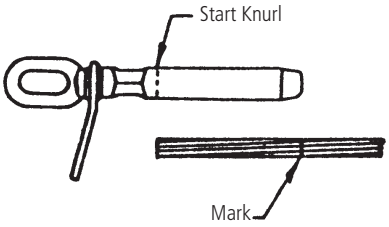
Installation Instructions

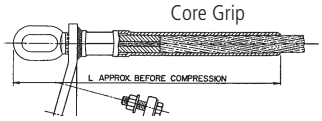
Non-Adjustable Quick Compress Dead Ends for ACSR Conductors (VES/HES and VED/HED Series)

1. Prior to making any connections, the conductor must be wire brushed. If the conductor is weathered or blackened, carefully unlay the aluminum strands for a distance equal to the compression length of the dead end barrel. Clean the aluminum strands thoroughly with a wire brush. An alternate way to thoroughly clean the aluminum oxidation from the conductor is to use the ConductaClean® system. Straighten several feet of conductor removing set caused by reel.

2. Mark the conductor from the end, a distance equal to the length of compression barrel.

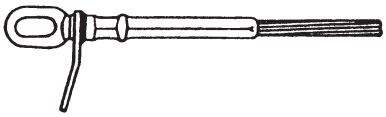


3. Cut the aluminum strands back a distance equal to the length of the core grip plus 1/4 inch (6 mm). Do not nick the steel strands. File burrs as necessary for ease of insertion.



4. Insert the steel core into the core grip. Do not twist the core grip while inserting core wire.

5. Insert the core grip and conductor into the compression barrel. Be sure the conductor is inserted beyond the mark on the conductor.

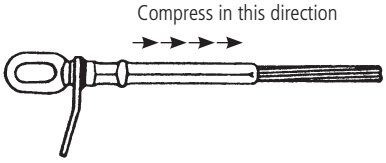


6. To compress the aluminum barrel, select the proper die size as stamped on the barrel.

7. The dead end will bow during compression unless care is taken to have 15 feet (4.5 m) of the conductor supported straight out from the end of the dead end. The weight of the conductor should not hang unsupported when compressing.

8. Make the initial compression at the "start knurl" and continue making compressions to the end of the dead end body. Complete die closure is required for each compression. Overlap the previous compression by approximately 1/4 die bite. It is recommended that die grooves be well lubricated with a lightweight oil. Oil coating should be maintained during entire compression operation.

9. Remove flash, if any, with a file or an abrasive cloth.

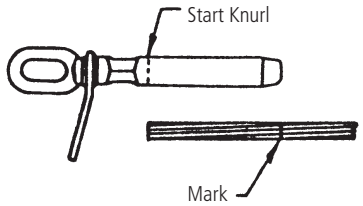


CAUTION: Follow installation instructions carefully. Improper installation can result in mechanical failure of the cable system and possible injury to persons handling or in the vicinity of the cable systems.

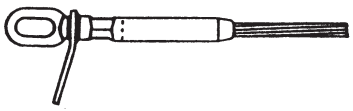
Installation Instructions

Non-Adjustable Quick Compress Dead Ends for AAC, AAAC and ACAR Conductors

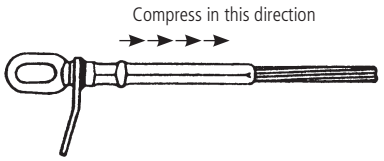
1. Prior to making any connections, the conductor must be wire brushed. If the conductor is weathered or blackened, carefully unlay the aluminum strands for a distance equal to the compression length of the dead end barrel. Clean the aluminum strands thoroughly with a wire brush. An alternate way to thoroughly clean the aluminum oxidation from the conductor is to use the ConductaClean® system. Straighten several feet of conductor removing set caused by reel.
2. Mark the conductor from the end, a distance equal to the length of compression barrel.



3. File burrs or sharp edges off the aluminum strands as necessary for ease of insertion.
4. Insert the conductor into the compression barrel. Be sure the conductor is inserted beyond the mark on the conductor.



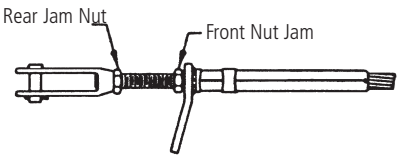
5. To compress the aluminum barrel, select the proper die size as stamped on the barrel.
6. The dead end will bow during compression unless care is taken to have 15 feet (4.5 m) of the conductor supported straight out from the end of the dead end. The weight of the conductor should not hang unsupported when compressing.
7. Make the initial compression at the "start knurl" and continue making compressions to the end of the dead end body. Complete die closure is required for each compression. Overlap the previous compression by approximately 1/4 die bite. It is recommended that die grooves be well lubricated with a lightweight oil. Oil coating should be maintained during entire compression operation.
8. Remove flash, if any, with a file or an abrasive cloth.



Installation Instructions

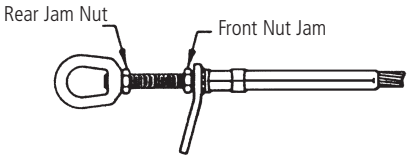
Adjustable Quick Compress Dead Ends for ACSR, AAC, AAAC and ACAR Conductors

1. To install, follow steps 1-9 on previous page for ACSR or 1-8 above for AAC, AAAC and ACAR.



To Adjust Dead Ends

2. Loosen rear nut jam.
3. Rotate clevis or eye for proper sag.
4. Tighten rear jam nut.

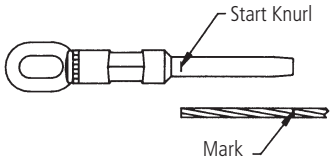


CAUTION: Follow installation instructions carefully. Improper installation can result in mechanical failure of the cable system and possible injury to persons handling or in the vicinity of the cable systems.

Installation Instructions

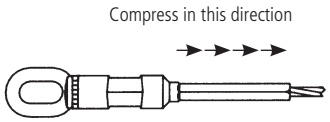
Non-Adjustable Quick Compress Dead Ends for Alumoweld® and Steel Ground Wire

1. Serve the conductor, prior to cutting, to help maintain the round contour. File burrs or sharp edges off the conductor as necessary for ease of insertion.
2. Straighten several feet of conductor removing set caused by reel.
3. Prior to making connections, the conductor must be clean. If the conductor is weathered or blackened, clean strands thoroughly with wire brush.
4. Mark the conductor for a distance from the end equal to the length of compression of the aluminum barrel.



5. Insert the conductor into the compression barrel. Be sure the conductor is inserted beyond the mark on the conductor.
6. Select the proper die size to compress the aluminum barrel. The die size indicated on the aluminum barrel should match that indicated on the compression dies.
7. The dead end will bow during compression unless reasonable care is taken to have about 15 feet of the conductor supported straight out from the end of the dead end such that the weight of the conductor does not hang unsupported from the end of the dead end when compressing.

8. It is recommended that die grooves be well lubricated with a light weight oil. Oil coating should be maintained during entire compression operation.
9. Make initial compression starting at the start knurl. Continue making compressions to the end of the dead end barrel. Overlapping the previous compression by approximately 1/4 die bite. Complete die closure is required for each compression.
10. Compressed portion of the dead end should have a smooth uniform appearance. Remove flash, if present, with file or emery cloth.

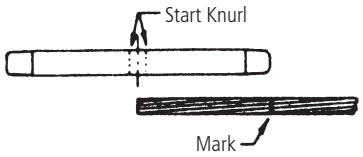


CAUTION: Follow installation instructions carefully. Improper installation can result in mechanical failure of the cable system and possible injury to persons handling or in the vicinity of the cable systems.

Installation Instructions

Quick Compress Joints for AAC, AAAC, ACAR, Alumoweld® and Steel Ground Wire Conductors

1. Prior to making any connections, the conductor must be clean. If the conductor is weathered or blackened, carefully unlay the aluminum strands for a distance equal to half the length of the joint. Clean the aluminum strands thoroughly with a wire brush. An alternate way to thoroughly clean the aluminum oxidation from the conductor is to use the ConductaClean® system. Straighten several feet of conductor removing set caused by reel.



2. Mark the conductor from the end, a distance equal to half the length of the joint.

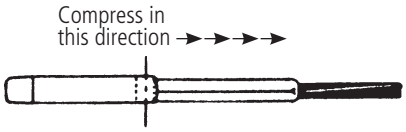
3. File burrs or sharp edges as necessary for ease of insertion.

4. Insert the conductor into one end of the joint. Be sure the conductor is inserted to the mark on the conductor.

5. To compress, select the proper die size as stamped on the joint.

6. The joint will bow during compression unless care is taken to have a minimum of 15 feet (4.5 m) of the conductor supported on both sides.

7. Make the initial compression at the 'start knurl' and continue compressing toward one end of the joint. Complete die closure is required for each compression. Overlap the previous compression by approximately 1/4 die bite. It is recommended that die grooves be well lubricated with a lightweight oil. Oil coating should be maintained during entire compression operation.



8. Repeat Steps #1 through #7 with the other side to complete the joint.

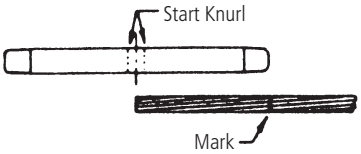
9. Remove flash, if any, with a file or an abrasive cloth.

CAUTION: Follow installation instructions carefully. Improper installation can result in mechanical failure of the cable system and possible injury to persons handling or in the vicinity of the cable systems.

Installation Instructions

Quick Compress Joints for ACSR Conductors

1. Prior to making any connections, the conductor must be wire brushed. If the conductor is weathered or blackened, carefully unlay the aluminum strands for a distance equal to half the length of the joint. Clean the aluminum strands thoroughly with a wire brush. An alternate way to thoroughly clean the aluminum oxidation from the conductor is to use the ConductaClean® system. Straighten several feet of conductor removing set caused by reel.



2. Mark the conductor from the end, a distance equal to half the length of the joint.

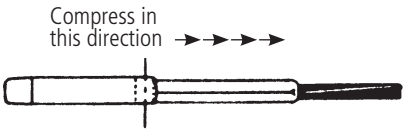
3. Cut the aluminum strands back a distance equal to the length of the core grip plus 1/4 inch (6 mm). Do not nick the steel strands. File burrs as necessary for ease of insertion.

4. Insert the steel core into the core grip. Do not twist the core grip while inserting core wire.

5. Insert the core grip and conductor into one end of the joint. Be sure the conductor is inserted to the mark on the conductor.

6. To compress, select the proper die size as stamped on the joint.

7. The joint will bow during compression unless care is taken to have a minimum of 15 feet (4.5 m) of the conductor supported on both sides.



8. Make the initial compression at the 'start knurl' and continue compressing toward one end of the joint. Complete die closure is required for each compression. Overlap the previous compression by approximately 1/4 die bite. It is recommended that die grooves be well lubricated with a lightweight oil. Oil coating should be maintained during entire compression operation.

9. Repeat Steps #1 through #8 with the other side to complete the joint.

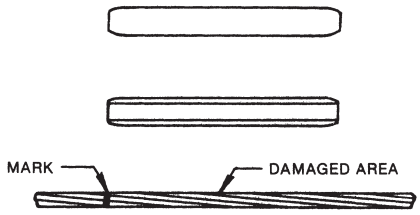
10. Remove flash, if any, with a file or an abrasive cloth.

CAUTION: Follow installation instructions carefully. Improper installation can result in mechanical failure of the cable system and possible injury to persons handling or in the vicinity of the cable systems.

Installation Instructions

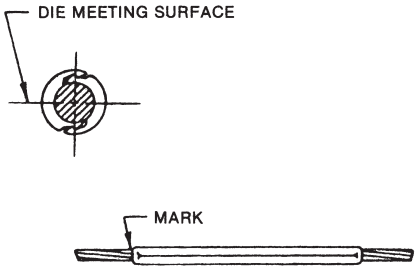
Quick Compress® Repair Sleeves on ACSR, AAC, AAAC and ACAR Conductors

1. Compression Repair Sleeves can be used to restore the electrical and mechanical integrity of a conductor when no more than 1/3 of the aluminum strands are damaged.
2. Mark the conductor from the damaged area 1/2 the length of the repair sleeve.
3. Select die size for compressing the repair sleeve. The die size on the die and the die size marked on the repair sleeve must be the same.
4. Prior to making connections. the groove of the aluminum accessories and the conductor must be clean. If the conductor is weathered or blackened, clean strands thoroughly with wire brush. Check accessory groove for foreign particles, removing if present.
5. Coat the aluminum conductor with AFL Filler Compound (AFC) over the length to be covered by the repair sleeve.



6. Place the repair sleeve groove on the conductor adjacent to damaged area and slide other half (keeper) in place.

7. Slide repair sleeve assembly over the damaged area to the mark on the conductor.
8. Make the initial compression over the center portion of the repair sleeve. Make the second compression on one end overlapping the initial compression by 1/4 die bite. Make the third compression on the opposite end, overlapping the initial compression by 1/4 die bite. Continue making compressions to one end of the repair sleeve overlapping the previous compression by 1/4 die bite. Complete die closure is required for each compression. Go back and complete the compression on the opposite end.
9. The compressed repair sleeve should have a smooth uniform appearance. Remove flash, if present, with file or emery cloth.

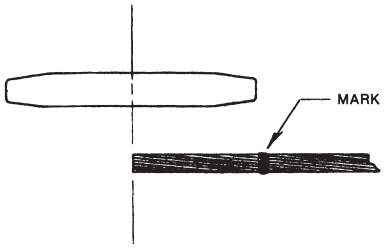


CAUTION: Follow installation instructions carefully. Improper installation can result in mechanical failure of the cable system and possible injury to persons handling or in the vicinity of the cable systems.

Installation Instructions

Quick Compress Jumper Connectors on ACSR, AAC, AAAC, ACAR, Alumoweld® and Steel Ground Wire Conductor

1. Measure back from each conductor end and mark at a distance equal to 1/2 the length of the aluminum jumper connector.
2. File burrs or sharp edges off the aluminum strands as necessary for ease of insertion.
3. Prior to making connections, the conductor must be wire brushed and accessory bores must be clean. If the conductor Is weathered or blackened, carefully unlay aluminum strands for a distance equal to or greater than 1/2 the length of the aluminum jumper connector and clean strands thoroughly with wire brush. An alternate way to thoroughly clean the aluminum oxidation from the conductor is to use the ConductaClean® system. Check accessory bore for foreign particles, removing if present.



4. Inject AFL Filler Compound (AFC) into each end of jumper connector and on the conductor to insure that excess compound will be forced from the jumper connector when compressions are completed. Insert conductor ends into the jumper connector. If the mark on the conductor is not at the end of the jumper connector, and there is resistance to further entry, twist the jumper connector on the conductor. This will work the compound between conductor strands and bleed air from the jumper connector.
5. Select die size for compressing jumper connector. The die size on die and die size marked on aluminum jumper connector must be the same.
6. The jumper connector will bow during compression unless reasonable care Is taken to have about 15 ft. (4.5 m) of the conductor supported straight out from both ends of the jumper connector such that the weight of the conductor does not hang unsupported from the end of the jumper connector when compressing.

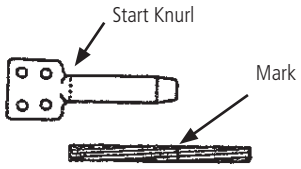
7. Compress jumper connector full length making initial compression over center stop. Overlap each successive compression by approximately 1/4 die bite. Complete die closure is required for each compression.
8. Compressed jumper connector should have a smooth uniform appearance. Remove flash, if present, with file or emery cloth.

CAUTION: Follow installation instructions carefully. Improper installation can result in mechanical failure of the cable system and possible injury to persons handling or in the vicinity of the cable systems.

Installation Instructions

Quick Compress® Compression Terminals

(These instructions are not for HiTemp® Conductors)



1. Prior to making any connections, the conductor must be clean. For new conductor, the outside diameter shall be wire brushed to remove the aluminum oxidation. If the conductor is weathered or blackened, carefully unlay the aluminum strands for a distance equal to the compression length of the terminal. Clean all of the aluminum strands thoroughly with a wire brush. An alternate way to thoroughly clean the aluminum oxidation from the conductor is to use the ConductaClean® system.

2. Mark the conductor from the end, a distance equal to the compression length of the terminal.

Quick Compress:

3a. Insert the conductor into the terminal. Be sure the conductor is inserted to the mark on the conductor. The terminal comes pre-filled with compound from the factory.

Standard Compression:

3b. Inject sufficient AFL Filler Compound (AFC) in the end of the terminal bore and on the conductor to ensure that excess compound will be visible at terminal end when barrel is completely compressed. See chart below for proper amount of AFC required for each terminal size.

AFC Filler Compound Required

PARTIAL TERMINAL CATALOG NUMBER	LB.	GRAMS (G)

5148., 5648., 5848.	0.32	145

CAUTION: Follow installation instructions carefully. Improper installation can result in mechanical failure of the cable system and possible injury to persons handling or in the vicinity of the cable systems.

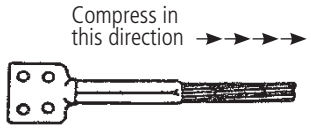
Installation Instructions (cont.)

Quick Compress® Compression Terminals

(These instructions are not for HiTemp® Conductors)

4. To compress, select the proper die size as stamped on the jumper connector.

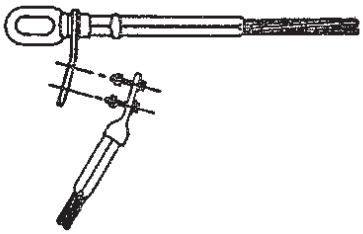
5. Compress the terminal, beginning at the "start knurl." Continue compressing toward the end of the terminal. Complete die closure is required for each compression. Overlap the previous compression by approximately 1/4 die bite. It is recommended that die grooves be well lubricated with a lightweight oil. Oil coating should be maintained during entire compression operation. (Other acceptable mediums that can be used instead of oil are wax, soap or plastic bag the terminal was shipped in.)



6. Remove flash, if any, with a file or an abrasive cloth.

To Attach Terminal Connector to Dead End or Tee Tap

7. Clean contact surface of pads to be connected by wire brushing thoroughly and immediately coating with a thin film of No. 2 Electrical Joint Compound (EJC). **DO NOT USE AFC.**



8. Bolt terminal to dead end pad. Partially tighten all bolts and then re-tighten each bolt to the recommended torque:

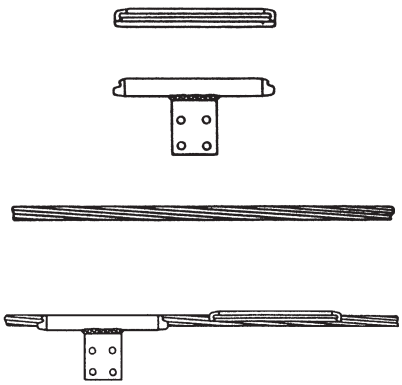
Aluminum 1/2" bolts - 25 lb-ft (34 N.m)
Stainless Steel 1/2" bolts - 40 lb-ft (54 N.m)

CAUTION: Follow installation instructions carefully. Improper installation can result in mechanical failure of the cable system and possible injury to persons handling or in the vicinity of the cable systems.

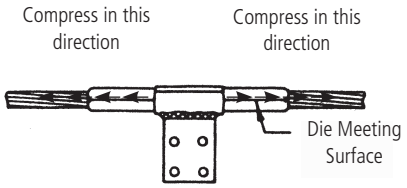
Installation Instructions

Quick Compress Open Run Tee Tap for ACSR, AAC, AAAC and ACAR Conductors

1. Remove the keeper.
2. To compress, select the proper die size as stamped on the jumper connector.
3. Prior to making connections, the groove of the aluminum accessories and the conductor must be clean. If the conductor is weathered or blackened, clean strands thoroughly with wire brush or abrasive cloth. Check the accessory groove for foreign particles and remove if present.
4. Coat the aluminum conductor with AFL Filler Compound (AFC) over the length to be covered by the tee tap.
5. Place run groove on conductor and slide the keeper in place.



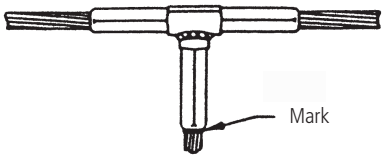
6. Make initial compression on either side of run starting at the "start knurl". Make the second compression on the opposite end of the run at the "start knurl". Continue making compressions to the end of the tee, overlapping the previous compression by approximately 1/4 die bite. Go back and complete the compression on the opposite end.
7. Compressed portion of tee should have a smooth, uniform appearance. Remove flash, if present, with file or abrasive cloth.



Installation Instructions

Quick Compress Open Run Tee Connector for ACSR, AAC, AAAC and ACAR Conductors

1. Install run tee using steps 1 - 7 above.
2. Insert conductor full depth into branch bore and mark conductor at end of branch. Remove conductor after marking.
3. Inject sufficient AFC In the end of the branch bore and on the conductor to insure that excess compound will be visible at the branch end when completely compressed.
4. Insert the conductor into the branch to the mark on the conductor.
5. Make initial compression starting at the "start knurl". Continue making compressions to mouth of the branch overlapping the previous compression by approximately 1/4 die bite.
6. Compressed portion of the branch should have a smooth, uniform appearance. Remove flash, If present, with file or abrasive cloth.



CAUTION: Follow installation instructions carefully. Improper installation can result in mechanical failure of the cable system and possible injury to persons handling or in the vicinity of the cable systems.

HiTemp Compression for ACSS and ACSS/TW Conductor

Why Use ACSS or ACSS/TW?

Demand for power continues to increase at an alarming rate, forcing utilities to put greater and greater electrical loads on their existing lines. However, most existing transmission circuits have been designed for operation at or below 93˚C. ACSR, the most commonly used conductor, cannot handle the higher temperatures resulting from increased current loads. Additional transmission lines are not a cost effective alternative. With the increasing de-regulation pressures, rising construction costs, and right-of-way scarcity, another option is needed. In response to this need, ACSS and ACSS/TW conductors were developed. These conductors allow utilities to increase the amount of current up to 40%. Instead of building new transmission lines, new ACSS and ACSS/TW conductors can replace existing ACSR conductor, thus allowing utilities to increase energy output.

However, with the increased power from ACSS and ACSS/TW conductors, standard compression accessories could not handle the elevated temperatures and work loads. In response, AFL developed the HiTemp Product Line, consisting of compression and motion control accessories, pulling grips, and high temperature compounds.

Features

Engineered Solution

AFL has specially designed and engineered this product line to provide improved heat dissipation. The HiTemp Compression Accessories are designed to operate 25-30% cooler than the conductor, extending its life. The HiTemp product line is rated for operation up to 250˚C.

Specially Tempered Aluminum

HiTemp Compression Accessories are fabricated from a specially tempered aluminum that will transfer elevated current and dissipate increased heat more efficiently.

High Strength Steel

The High Strength Steel Eyes and Sleeves maintain a permanent connection to the conductor core. The steel will not weaken at elevated temperatures and ensures 95% of the ASTM rated conductor strength.

Standard AH and SH Dies

The same AH and SH compression dies used on AFL's Standard Compression Accessories are used on HiTemp Compression Accessories.

HiTemp Motion Control

AFL has engineered a full line of motion control accessories for ACSS and ACSS/TW conductors. These accessories are designed to control aeolian vibration and wake-induced oscillation under the increased operating temperatures of ACSS and ACSS/TW conductors.

HiTemp AFL Filler Compound (AFCHT)

AFL has designed HiTemp AFL Filler Compound (AFCHT), a moisture inhibitor compound that will not deteriorate at the increased operating temperatures of ACSS and ACSS/TW conductors.

Proven Excellence

AFL designed the first accessories for ACSS, formally known as SSAC, in 1978. AFL has superior knowledge through years of experience to provide assistance on ACSS and ACSS/TW accessories.

Solo HD® Compression Dead End for ACSR and ACSS Conductors, Eye and Clevis Type, Single Tongue

This Dead End Assembly is specifically designed for use on both ACSR and ACSS conductors. The body of the Solo HD Dead End is fabricated from a specially tempered aluminum that will transfer elevated current and dissipate increased heat more efficiently.

The tongue and terminal pad are constructed with a 15° angle, which permits the terminal connector to be bolted in the straight or 30° position. Its innovative design provides a solid, void-free compression through the complete unit with once set of dies, reducing the total quantity of compressions and installation time by almost half when compared to the of the ones required by the two die compression systems while keeping the same reliable and proven performance.

All Solo HD Dead Ends are designed for full tension use, achieving a minimum of 95% of the ASTM rated strength of the conductor. Each deadend assembly comes with terminal and aluminum hardware.

For die sizes 30AH and above, the end tapers of the compression portions of all compression accessories are supplied with a high voltage finish. Corona bolts are furnished as standard on 15° terminals for these die sizes.

The square edges of the bolted pads of the compression accessories could cause Corona. Pads with edges and corners rounded can be supplied by adding the catalog suffix "EHV".

Benefits

- **Half the Installation Time**
  Using an innovative core gripping system that allows a single die to compress the outer aluminum barrel to grip both the steel core as well as the aluminum strands, utilizing the same Aluminum Hex (AH) die set.
- **No Filler Compound Required**
  By creating a practically void-free compression, eliminating ingress of water, and using steels that eliminate the exposure of raw steel after, thereby eliminating rust and corrosion, AFL has removed variability of the amount of compound being placed in each connector.
- **Joints Travel Over Sheaves**
  Enhancing speed of installation, full tension joints can travel through sheaves without impact to the performance of the connector, allowing for more conductor to be strung from a single location.
- **Same Install Method**
  With no new tools required, installation crews do not require training on new compression tools.
- **One Connector**
  Assembly can be used for both ACSS and ACSR type conductors, eliminating the need for multiple part numbers.
- **Same Compression Die Set**
  The Aluminum Hex (AH) die size remains the same as that of the standard AFL two-die system used today and eliminates the need for the Steel Hex (SH) dies altogether.
- **Same Compression Tools**
  By using the same compression pumps and presses, AFL does not require the need for a large investment in both the tools and training.

Qualifications

GOVERNING BODY	STANDARD CODE
ANSI	C119.4

Contact AFL for further details.

Solo HD® Compression Dead End for ACSR and ACSS Conductors, Eye and Clevis Type, Single Tongue

Ordering Information

Assembly Catalog No. **Terminal Connector** **EHV Finish**

Step 1: Assembly Catalog Number
Determine the assembly catalog number based on the conductor being used.

For a clevis application substitute the E for a C:
SDES-AS: EYE TERMINATION
SDCS-AS: CLEVIS TERMINATION

Step 2: Terminal Connector
For an assembly without a terminal connector, use "NT".
For an assembly with a terminal connector, leave blank.

Step 3: Extra High Voltage Finish
For Extra High Voltage Finish, use "EHV". (> 345 kV).
For Standard Finish, leave blank. (< 345 kV)

Step 4: Assemble Catalog Number

EXAMPLE: For 795 Drake ACSS Conductor with no terminal and EHV finish, the complete catalog number is: **SDES-AS142HTNTEHV**

Notes
For instructions, see Solo HD ACSR/ACSS/ACSS-TW Dead End installation instructions INS-ACA116 on page 384.

Solo HD® Compression Dead End for ACSR and ACSS Conductor, Eye and Clevis Type, Double Tongue

This Double Tongue Dead End Assembly is specifically designed for ACSR and ACSS conductor. The body of the Solo HD Dead Ends are fabricated from a specially tempered aluminum that will transfer elevated current and dissipate increased heat more efficiently.
The tongue and terminal pad are constructed with a 15° angle, which permits the terminal connector to be bolted in the straight or 30° position. Its innovative design provides a solid, void-free compression through the complete unit with once set of dies, reducing the total quantity of compressions and installation time by almost ½ when compared to the of the ones required by the two die compression systems while keeping the same reliable and proven performance.

All Solo HD Dead Ends are designed for full tension use, achieving a minimum of 95% of the ASTM rated strength of the conductor. Each dead end assembly comes with two 15° terminals and aluminum hardware.

For die sizes 30AH and above, the end tapers of the compression portions of all compression accessories are supplied with a high voltage finish. Corona bolts are furnished as standard on 15° terminals for these die sizes.

The square edges of the bolted pads of the compression accessories could cause Corona. Pads with edges and corners rounded can be supplied by adding the catalog suffix "EHV".

Benefits

- **Half the Installation Time**
  Using an innovative core gripping system that allows a single die to compress the outer aluminum barrel to grip both the steel core as well as the aluminum strands, utilizing the same Aluminum Hex (AH) die set.
- **No Filler Compound Required**
  By creating a practically void-free compression, eliminating ingress of water, and using steels that eliminate the exposure of raw steel after, thereby eliminating rust and corrosion, AFL has removed variability of the amount of compound being placed in each connector.
- **Joints Travel Over Sheaves**
  Enhancing speed of installation, full tension joints can travel through sheaves without impact to the performance of the connector, allowing for more conductor to be strung from a single location.
- **Same Install Method**
  With no new tools required, installation crews do not require training on new compression tools.
- **One Connector**
  Assembly can be used for both ACSS and ACSR type conductors, eliminating the need for multiple part numbers.
- **Same Compression Die Set**
  The Aluminum Hex (AH) die size remains the same as that of the standard AFL two-die system used today and eliminates the need for the Steel Hex (SH) dies altogether.
- **Same Compression Tools**
  By using the same compression pumps and presses, AFL does not require the need for a large investment in both the tools and training.

Qualifications

GOVERNING BODY	STANDARD CODE
ANSI	C119.4

Contact AFL for further details.

Solo HD® Compression Dead End for ACSR and ACSS Conductor, Eye and Clevis Type, Double Tongue

Ordering Information

Assembly Catalog No. **Terminal Connector** **EHV Finish**

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

For a clevis application substitute the E for a C:
SDED-AS: EYE TERMINATION
SDCD-AS: CLEVIS TERMINATION

Step 2: Terminal Connector

For an assembly without a terminal connector, use "NT".
For an assembly with a terminal connector, leave blank.

Step 3: Extra High Voltage Finish

For Extra High Voltage Finish, use "EHV". (> 345 kV)
For Standard Finish, leave blank. (< 345 kV)

Step 4: Assemble Catalog Number

EXAMPLE: For 795 Drake ACSS Conductor with no terminal and EHV finish, the complete catalog number is: **SDED-AS142HTNTEHV**

Notes

For instructions, see Solo HD ACSR/ACSS/ACSS-TW Dead End installation instructions INS-ACA116 on page 384.

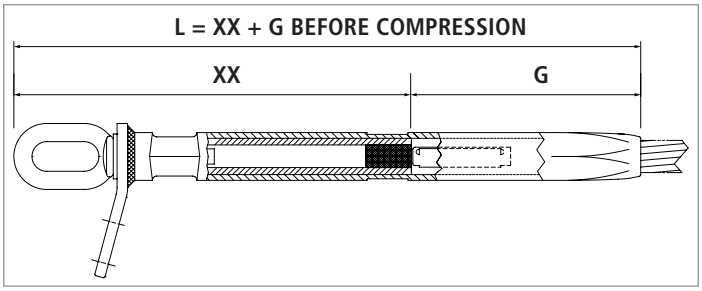
Solo HD Replacement Compression Dead End for ACSR and ACSS Conductors, SDESR Series



The Solo HD Replacement Dead Ends are used to replace damaged conductor and dead ends at the end of a span. They are designed for fast and easy installation, requiring only the AH compression die set. By using a high strength alloy, the compression length has been shortened for less compression bites, while maintaining a minimum 95% of the ASTM rated strength. The replacement dead end does not require filler compound, eliminating an installation step.

The square edges of the bolted pads of the compression accessories could cause Corona. Pads with edges and corners rounded can be supplied by adding the catalog suffix "EHV." Each dead end assembly comes with terminal and aluminum hardware, unless no terminal (NT) is used in the part number. The tongue and terminal pad are constructed with a 15° angle, which permits a terminal connector to be bolted in the straight or 30° position.

The end tapers of all compression accessories are supplied with a high voltage finish for die size sections 30AH and above.

Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Step 2: Terminal Connector

For an assembly without a terminal connector, use "NT".
For an assembly with a terminal connector, leave blank.

Step 3: Extra High Voltage Finish

For Extra High Voltage Finish, use "EHV". (> 345 kV). For Standard Finish, leave blank. (< 345 kV)

Step 4: Determine Length of Span Removal (XX)

Determine the length of existing dead end and/or conductor (XX) that will be cut out, to the nearest inch (Maximum 60").

Step 5: Assemble Catalog Number

Catalog Number + **Removed Conductor Length (XX)** + **(No) Terminal Connector** + **EHV Finish**

Example:

A replacement compression dead end for 795 Drake conductor with no terminal, EHV finish and a removed conductor length of 24 inches, the complete catalog number is:

SDES-AS142HTR24NTEHV

Notes:

1. Assembly Catalog Number includes one aluminum body, one terminal, and one eye/core grip.
2. Installation Instructions for Compression Joints (INS-ACA116) are on page 384 in the HT section in this catalog.
3. For more information on die selection and ordering instructions, see Tools and Equipment tab in this catalog.

Solo HD® Compression Joint for ACSR and ACSS Conductor, Full Tension

The SDCJ-AS Series Compression Joint Assembly is specifically designed for ACSR and ACSS conductors. The Solo HD Compression Joint is fabricated from a specially tempered aluminum that will transfer elevated current and dissipate increased heat more efficiently. Its innovative design provides a solid, void-free compression through the complete unit with once set of dies, reducing the total quantity of compressions and installation time by almost half when compared to the of the ones required by the two die compression systems while keeping the same reliable and proven performance.

All Solo HD Compression Joints are designed for full tension use, achieving a minimum of 95% of the ASTM rated strength of the conductor. Each compression joint assembly comes with an aluminum joint and a steel sleeve.

For die sizes 30AH and above, the end tapers of the compression portions of all compression accessories are supplied with a high voltage finish.

Benefits

- **Half the Installation Time**
  Using an innovative core gripping system that allows a single die to compress the outer aluminum barrel to grip both the steel core as well as the aluminum strands, utilizing the same Aluminum Hex (AH) die set.
- **No Filler Compound Required**
  By creating a practically void-free compression, eliminating ingress of water, and using steels that eliminate the exposure of raw steel after, thereby eliminating rust and corrosion, AFL has removed variability of the amount of compound being placed in each connector.
- **Joints Travel Over Sheaves**
  Enhancing speed of installation, full tension joints can travel through sheaves without impact to the performance of the connector, allowing for more conductor to be strung from a single location.
- **Same Install Method**
  With no new tools required, installation crews do not require training on new compression tools.
- **One Connector**
  Assembly can be used for both ACSS and ACSR type conductors, eliminating the need for multiple part numbers.
- **Same Compression Die Set**
  The Aluminum Hex (AH) die size remains the same as that of the standard AFL two-die system used today and eliminates the need for the Steel Hex (SH) dies altogether.
- **Same Compression Tools**
  By using the same compression pumps and presses, AFL does not require the need for a large investment in both the tools and training.

Qualifications

GOVERNING BODY	STANDARD CODE
ANSI	C119.4

Contact AFL for further details.

Solo HD® Compression Joint for ACSR and ACSS Conductor, Full Tension

Ordering Information

Assembly Catalog No. **Terminal Connector** **EHV Finish**

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

EXAMPLE: For 795 Drake ACSS Conductor with no terminal and EHV finish, the complete catalog number is: **SDCJ-AS142HT**

Notes

For instructions, see Solo HD ACSR/ACSS/ACSS-TW Joint installation instructions ACA117 on page 400.

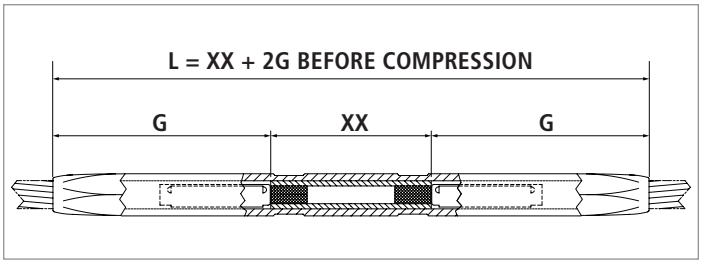
Solo HD Replacement Compression Joint for ACSR and ACSS Conductors, SDCJR Series



The Solo HD Replacement Joints are used to replace damaged conductor and removed splices in midspan. They are designed for fast and easy installation, requiring only the AH compression die set. By using a high strength alloy, the compression length has been shortened for less compression bites, while maintaining a minimum 95% of the ASTM rated strength. The replacement joint does not require filler compound, eliminating an installation step.

The end tapers of all compression accessories are supplied with a high voltage finish for die size sections 30AH and above.

Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Step 2: Determine Length of Span Removal (XX)

Determine the length of existing splice and/or conductor (XX) that will be cut out, to the nearest inch (Maximum 60").

Step 3: Assemble Catalog Number

Catalog Number + **Removed Conductor Length (XX)**

Example:

A replacement compression joint for 795 Drake conductor with a removed conductor length of 24 inches, the complete catalog number is:

SDCJ-AS142HTR24

Notes:

1. Assembly Catalog Number includes one aluminum body and two core grips.
2. Installation Instructions for Compression Joints (INS-ACA117) are on page 400 in the HT section in this catalog.
3. For more information on die selection and ordering instructions, see Tools and Equipment tab in this catalog.

Solo HD® Compression Dead End for ACSR and ACSS Conductor, Adjustable Clevis, Single Tongue

The SDACS-AS Series Dead End Assembly is specifically designed for use on both ACSR and ACSS conductors. The body of the SOLO HD Dead End is fabricated from a specially tempered aluminum that will transfer elevated current and dissipate increased heat more efficiently.

The tongue and terminal pad are constructed with a 15º angle, which permits the terminal connector to be bolted in the straight or 30º position. Its innovative design provides a solid, void-free compression through the complete unit with once set of dies, reducing the total quantity of compressions and installation time by almost ½ when compared to the of the ones required by the two die compression systems while keeping the same reliable and proven performance.

All Solo HD Dead Ends are designed for full tension use, achieving a minimum of 95% of the ASTM rated strength of the conductor. Each dead end assembly comes with terminal and aluminum hardware.

For die sizes 30 AH and above, the end tapers of the compression portions of all compression accessories are supplied with a high voltage finish. Corona bolts are furnished as standard on 15º terminals for these die sizes.

The square edges of the bolted pads of the compression accessories could cause Corona. Pads with edges and corners rounded can be supplied by adding the catalog suffix "EHV".

Benefits

- **Half the Installation Time**
  Using an innovative core gripping system that allows a single die to compress the outer aluminum barrel to grip both the steel core as well as the aluminum strands, utilizing the same Aluminum Hex (AH) die set.
- **No Filler Compound Required**
  By creating a practically void-free compression, eliminating ingress of water, and using steels that eliminate the exposure of raw steel after, thereby eliminating rust and corrosion, AFL has removed variability of the amount of compound being placed in each connector.
- **Joints Travel Over Sheaves**
  Enhancing speed of installation, full tension joints can travel through sheaves without impact to the performance of the connector, allowing for more conductor to be strung from a single location.
- **Same Install Method**
  With no new tools required, installation crews do not require training on new compression tools.
- **One Connector**
  Assembly can be used for both ACSS and ACSR type conductors, eliminating the need for multiple part numbers.
- **Same Compression Die Set**
  The Aluminum Hex (AH) die size remains the same as that of the standard AFL two-die system used today and eliminates the need for the Steel Hex (SH) dies altogether.
- **Same Compression Tools**
  By using the same compression pumps and presses, AFL does not require the need for a large investment in both the tools and training.

Qualifications

GOVERNING BODY	STANDARD CODE
ANSI	C119.4

Contact AFL for further details.

Solo HD® Compression Dead End for ACSR and ACSS Conductor, Adjustable Clevis, Single Tongue

Ordering Information

Assembly Catalog No. **Terminal Connector** **EHV Finish**

Step 1: Assembly Catalog Number
Determine the assembly catalog number based on the conductor being used.

Step 2: Terminal Connector
For an assembly without a terminal connector, use "NT".
For an assembly with a terminal connector, leave blank.

Step 3: Extra High Voltage Finish
For Extra High Voltage Finish, use "EHV". (> 345 kV)
For Standard Finish, leave blank. (< 345 kV)
For bolt, nut and cotter pin add BNC at the END

Step 4: Assemble Catalog Number

EXAMPLE: For 795 Drake ACSS Conductor with no terminal and EHV finish, the complete catalog number is: **SDACS-AS142HTNTEHV**

Notes

For instructions, see Solo HD ACSR/ACSS/ACSS-TW Adjustable Clevis Dead End installation instructions INS-ACA125 on page 392.

Solo HD® Compression Dead End for ACSS/TW Conductor, Eye and Clevis Type, Single Tongue

This Series Dead End Assembly is specifically designed for ACSS/TW conductors. The body of the Solo HD Dead End is fabricated from a specially tempered aluminum that will transfer elevated current and dissipate increased heat more efficiently.

The tongue and terminal pad are constructed with a 15° angle, which permits the terminal connector to be bolted in the straight or 30° position. Its innovative design provides a solid, void-free compression through the complete unit with once set of dies, reducing the total quantity of compressions and installation time by almost half when compared to the of the ones required by the two die compression systems while keeping the same reliable and proven performance.

All Solo HD Dead Ends are designed for full tension use, achieving a minimum of 95% of the ASTM rated strength of the conductor. Each dead-end assembly comes with terminal and aluminum hardware.

For die sizes 30AH and above, the end tapers of the compression portions of all compression accessories are supplied with a high voltage finish. Corona bolts are furnished as standard on 15° terminals for these die sizes.

The square edges of the bolted pads of the compression accessories could cause Corona. Pads with edges and corners rounded can be supplied by adding the catalog suffix "EHV".

Benefits

- **Half the Installation Time**
  Using an innovative core gripping system that allows a single die to compress the outer aluminum barrel to grip both the steel core as well as the aluminum strands, utilizing the same Aluminum Hex (AH) die set.
- **No Filler Compound Required**
  By creating a practically void-free compression, eliminating ingress of water, and using steels that eliminate the exposure of raw steel after, thereby eliminating rust and corrosion, AFL has removed variability of the amount of compound being placed in each connector.
- **Joints Travel Over Sheaves**
  Enhancing speed of installation, full tension joints can travel through sheaves without impact to the performance of the connector, allowing for more conductor to be strung from a single location.
- **Same Install Method**
  With no new tools required, installation crews do not require training on new compression tools.
- **One Connector**
  Assembly can be used for both ACSS and ACSR type conductors, eliminating the need for multiple part numbers.
- **Same Compression Die Set**
  The Aluminum Hex (AH) die size remains the same as that of the standard AFL two-die system used today and eliminates the need for the Steel Hex (SH) dies altogether.
- **Same Compression Tools**
  By using the same compression pumps and presses, AFL does not require the need for a large investment in both the tools and training.

Solo HD® Compression Dead End for ACSS/TW Conductor, Eye and Clevis Type, Single Tongue

Ordering Information

Assembly Catalog No. **Terminal Connector** **EHV Finish**

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

For a clevis application substitute the E for a C:
SDES-AS: EYE TERMINATION
SDCS-AS: CLEVIS TERMINATION

Step 2: Terminal Connector

For an assembly without a terminal connector, use "NT".
For an assembly with a terminal connector, leave blank.

Step 3: Extra High Voltage Finish

For Extra High Voltage Finish, use "EHV". (> 345 kV).
For Standard Finish, leave blank. (< 345 kV)

Step 4: Assemble Catalog Number

EXAMPLE: For 795 Drake ACSS Conductor with no terminal and EHV finish, the complete catalog number is: **SDES-AS142HTNTEHV**

Notes

For instructions, see Solo HD ACSR/ACSS/ACSS-TW Dead End installation instructions INS-ACA116 on page 384.

Solo HD® Compression Dead End for ACSS/TW Conductor, Eye and Clevis Type, Double Tongue

This Double Tongue Dead End Assembly is specifically designed for ACSS/TW conductors. The body of the Solo HD Dead Ends are fabricated from a specially tempered aluminum that will transfer elevated current and dissipate increased heat more efficiently.

The tongue and terminal pad are constructed with a 15° angle, which permits the terminal connector to be bolted in the straight or 30° position. Its innovative design provides a solid, void-free compression through the complete unit with once set of dies, reducing the total quantity of compressions and installation time by almost half when compared to the of the ones required by the two die compression systems while keeping the same reliable and proven performance.

All Solo HD Dead Ends are designed for full tension use, achieving a minimum of 95% of the ASTM rated strength of the conductor. Each dead end assembly comes with two 15° terminals and aluminum hardware.

For die sizes 30AH and above, the end tapers of the compression portions of all compression accessories are supplied with a high voltage finish. Corona bolts are furnished as standard on 15° terminals for these die sizes.

The square edges of the bolted pads of the compression accessories could cause Corona. Pads with edges and corners rounded can be supplied by adding the catalog suffix "EHV".

Benefits

- **Half the Installation Time**
  Using an innovative core gripping system that allows a single die to compress the outer aluminum barrel to grip both the steel core as well as the aluminum strands, utilizing the same Aluminum Hex (AH) die set.
- **No Filler Compound Required**
  By creating a practically void-free compression, eliminating ingress of water, and using steels that eliminate the exposure of raw steel after, thereby eliminating rust and corrosion, AFL has removed variability of the amount of compound being placed in each connector.
- **Joints Travel Over Sheaves**
  Enhancing speed of installation, full tension joints can travel through sheaves without impact to the performance of the connector, allowing for more conductor to be strung from a single location.
- **Same Install Method**
  With no new tools required, installation crews do not require training on new compression tools.
- **One Connector**
  Assembly can be used for both ACSS and ACSR type conductors, eliminating the need for multiple part numbers.
- **Same Compression Die Set**
  The Aluminum Hex (AH) die size remains the same as that of the standard AFL two-die system used today and eliminates the need for the Steel Hex (SH) dies altogether.
- **Same Compression Tools**
  By using the same compression pumps and presses, AFL does not require the need for a large investment in both the tools and training.

Qualifications

GOVERNING BODY	STANDARD CODE
ANSI	C119.4

Contact AFL for further details.

Solo HD® Compression Dead End for ACSS/TW Conductor, Eye Type, Double Tongue, SDED-AS Series

Ordering Information

Assembly Catalog No. **Terminal Connector** **EHV Finish**

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

For a clevis application substitute the E for a C:
SDED-AS: EYE TERMINATION
SDCD-AS: CLEVIS TERMINATION

Step 2: Terminal Connector

For an assembly without a terminal connector, use "NT".
For an assembly with a terminal connector, leave blank.

Step 3: Extra High Voltage Finish

For Extra High Voltage Finish, use "EHV". (> 345 kV).
For Standard Finish, leave blank. (< 345 kV)

Step 4: Assemble Catalog Number

EXAMPLE: For 795 Drake ACSS Conductor with no terminal and EHV finish, the complete catalog number is: **SDED-AS142HTNTEHV**

Notes

For instructions, see Solo HD ACSR/ACSS/ACSS-TW Dead End installation instructions INS-ACA116 on page 384.

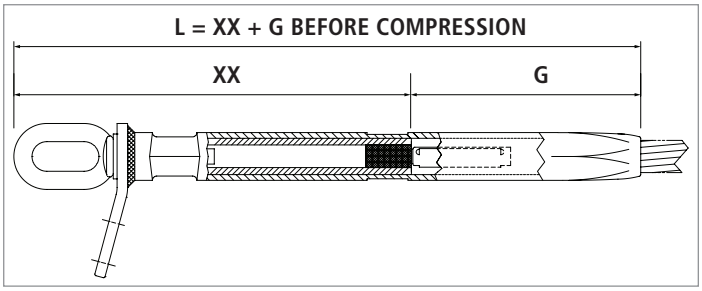
Solo HD Replacement Compression Dead End for ACSS/TW and ACSR/TW Conductors, SDESR Series



The Solo HD Replacement Dead Ends are used to replace damaged conductor and dead ends at the structure. They are designed for fast and easy installation, requiring only the AH compression die set. By using a high strength alloy, the compression length has been shortened for less compression bites, while maintaining a minimum 95% of the ASTM rated strength. The replacement dead end does not require filler compound, eliminating an installation step.

The square edges of the bolted pads of the compression accessories could cause Corona. Pads with edges and corners rounded can be supplied by adding the catalog suffix "EHV." Each dead end assembly comes with terminal and aluminum hardware, unless no terminal (NT) is used in the part number. The tongue and terminal pad are constructed with a 15° angle, which permits a terminal connector to be bolted in the straight or 30° position.

The end tapers of all compression accessories are supplied with a high voltage finish for die size sections 30AH and above.

Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Step 2: Terminal Connector

For an assembly without a terminal connector, use "NT".
For an assembly with a terminal connector, leave blank.

Step 3: Extra High Voltage Finish

For Extra High Voltage Finish, use "EHV". (> 345 kV). For Standard Finish, leave blank. (< 345 kV)

Step 4: Determine Length of Span Removal (XX)

Determine the length of existing dead end and/or conductor (XX) that will be cut out, to the nearest inch (Maximum 60").

Step 5: Assemble Catalog Number

Catalog Number + **Removed Conductor Length (XX)** + **(No) Terminal Connector** + **EHV Finish**

Example:

A replacement compression dead end for 959.6 Suwannee/TW conductor with no terminal, EHV finish and a removed conductor length of 24 inches, the complete catalog number is:

SDES-AS108HTR24NTEHV

Notes:

1. Assembly Catalog Number includes one aluminum body, one terminal, and one eye/core grip.
2. Installation Instructions for Compression Joints (INS-ACA116) are on page 384 in the HT section in this catalog.
3. For more information on die selection and ordering instructions, see Tools and Equipment tab in this catalog.

Solo HD® Compression Joint for ACSS/TW Conductor

The SDCJ-AS Series Compression Joint Assembly is specifically designed for ACSS/TW conductors. The Solo HD Compression Joint is fabricated from a specially tempered aluminum that will transfer elevated current and dissipate increased heat more efficiently. Its innovative design provides a solid, void-free compression through the complete unit with once set of dies, reducing the total quantity of compressions and installation time by almost half when compared to the of the ones required by the two die compression systems while keeping the same reliable and proven performance.

All Solo HD Compression Joints are designed for full tension use, achieving a minimum of 95% of the ASTM rated strength of the conductor. Each compression joint assembly comes with an aluminum joint and a steel sleeve.

For die sizes 30AH and above, the end tapers of the compression portions of all compression accessories are supplied with a high voltage finish.

Benefits

- **Half the Installation Time**
  Using an innovative core gripping system that allows a single die to compress the outer aluminum barrel to grip both the steel core as well as the aluminum strands, utilizing the same Aluminum Hex (AH) die set.
- **No Filler Compound Required**
  By creating a practically void-free compression, eliminating ingress of water, and using steels that eliminate the exposure of raw steel after, thereby eliminating rust and corrosion, AFL has removed variability of the amount of compound being placed in each connector.
- **Joints Travel Over Sheaves**
  Enhancing speed of installation, full tension joints can travel through sheaves without impact to the performance of the connector, allowing for more conductor to be strung from a single location.
- **Same Install Method**
  With no new tools required, installation crews do not require training on new compression tools.
- **One Connector**
  Assembly can be used for both ACSS and ACSR type conductors, eliminating the need for multiple part numbers.
- **Same Compression Die Set**
  The Aluminum Hex (AH) die size remains the same as that of the standard AFL two-die system used today and eliminates the need for the Steel Hex (SH) dies altogether.
- **Same Compression Tools**
  By using the same compression pumps and presses, AFL does not require the need for a large investment in both the tools and training.

Qualifications

GOVERNING BODY	STANDARD CODE
ANSI	C119.4

Contact AFL for further details.

Solo HD® Compression Joint for ACSS/TW Conductor

Ordering Information

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

EXAMPLE: For 795 Drake ACSS Conductor with no terminal and EHV finish, the complete catalog number is: **SDCJ-AS142HT**

Notes

For instructions, see Solo HD ACSR/ACSS/ACSS-TW Joint installation instructions INS-ACA117 on page 400.

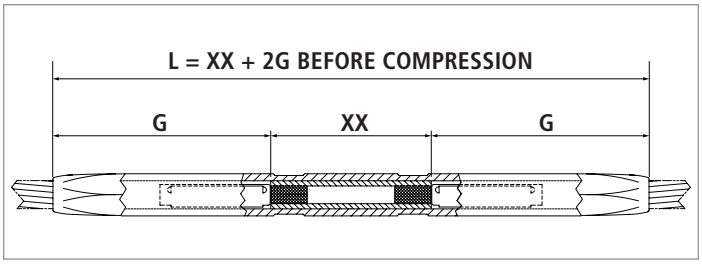
Solo HD Replacement Compression Joint for ACSS/TW and ACSR/TW Conductors, SDCJR Series



The Solo HD Replacement Joints are used to replace damaged conductor and removed splices in midspan. They are designed for fast and easy installation, requiring only the AH compression die set. By using a high strength alloy, the compression length has been shortened for less compression bites, while maintaining a minimum 95% of the ASTM rated strength. The replacement joint does not require filler compound, eliminating an installation step.

The end tapers of all compression accessories are supplied with a high voltage finish for die size sections 30AH and above.

Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Step 2: Determine Length of Span Removal (XX)

Determine the length of existing splice and/or conductor (XX) that will be cut out, to the nearest inch (Maximum 60").

Step 3: Assemble Catalog Number

Catalog Number + **Removed Conductor Length (XX)**

Example:

A replacement compression joint for 959.6 Suwannee/TW conductor with a removed conductor length of 24 inches, the complete catalog number is:

SDCJ-AS108HTR24

Notes:

1. Assembly Catalog Number includes one aluminum body and two core grips.
2. Installation Instructions for Compression Joints (INS-ACA117) are on page 400 in the HT section in this catalog.
3. For more information on die selection and ordering instructions, see Tools and Equipment tab in this catalog.

Solo HD® Compression Dead End for ACSS/TW Conductor, Adjustable Clevis, Single Tongue

The SDACS-AS Series Dead End Assembly is specifically designed for ACSS/TW conductors. The body of the SOLO HD Dead End is fabricated from a specially tempered aluminum that will transfer elevated current and dissipate increased heat more efficiently.

The tongue and terminal pad are constructed with a 15° angle, which permits the terminal connector to be bolted in the straight or 30° position. Its innovative design provides a solid, void-free compression through the complete unit with once set of dies, reducing the total quantity of compressions and installation time by almost ½ when compared to the of the ones required by the two die compression systems while keeping the same reliable and proven performance.

All Solo HD Dead Ends are designed for full tension use, achieving a minimum of 95% of the ASTM rated strength of the conductor. Each dead end assembly comes with terminal and aluminum hardware.

For die sizes 30 AH and above, the end tapers of the compression portions of all compression accessories are supplied with a high voltage finish. Corona bolts are furnished as standard on 15° terminals for these die sizes.

The square edges of the bolted pads of the compression accessories could cause Corona. Pads with edges and corners rounded can be supplied by adding the catalog suffix "EHV".

Benefits

- **Half the Installation Time**
  Using an innovative core gripping system that allows a single die to compress the outer aluminum barrel to grip both the steel core as well as the aluminum strands, utilizing the same Aluminum Hex (AH) die set.
- **No Filler Compound Required**
  By creating a practically void-free compression, eliminating ingress of water, and using steels that eliminate the exposure of raw steel after, thereby eliminating rust and corrosion, AFL has removed variability of the amount of compound being placed in each connector.
- **Joints Travel Over Sheaves**
  Enhancing speed of installation, full tension joints can travel through sheaves without impact to the performance of the connector, allowing for more conductor to be strung from a single location.
- **Same Install Method**
  With no new tools required, installation crews do not require training on new compression tools.
- **One Connector**
  Assembly can be used for both ACSS and ACSR type conductors, eliminating the need for multiple part numbers.
- **Same Compression Die Set**
  The Aluminum Hex (AH) die size remains the same as that of the standard AFL two-die system used today and eliminates the need for the Steel Hex (SH) dies altogether.
- **Same Compression Tools**
  By using the same compression pumps and presses, AFL does not require the need for a large investment in both the tools and training.

Solo HD® Compression Dead End for ACSS/TW Conductor, Adjustable Clevis, Single Tongue

Ordering Information

Assembly Catalog No. **Terminal Connector** **EHV Finish**

Step 1: Assembly Catalog Number
Determine the assembly catalog number based on the conductor being used.

Step 2: Terminal Connector
For an assembly without a terminal connector, use "NT".
For an assembly with a terminal connector, leave blank.

Step 3: Extra High Voltage Finish
For Extra High Voltage Finish, use "EHV". (> 345 kV).
For Standard Finish, leave blank. (< 345 kV)

Step 4: Assemble Catalog Number

EXAMPLE: For 795 Drake ACSS/TW Conductor with no terminal and EHV finish, the complete catalog number is: **SDACS-AS142HTNTEHV**

Notes –

For instructions, see Solo HD ACSR/ACSS/ACSS-TW Adjustable Clevis Dead End installation instructions INS-ACA125 on page 392.

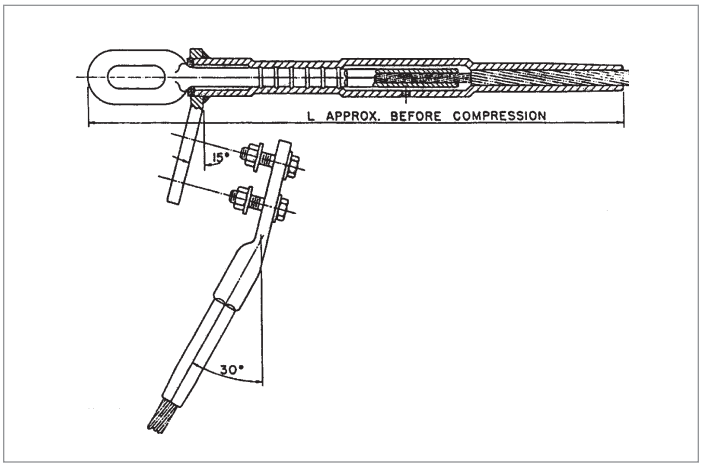
HiTemp Compression Dead End for ACSS Conductor, Eye Type, Single Tongue, 33100HT Series



The 33100HT Series Dead End Assembly is specifically designed for ACSS conductors. The body of the HiTemp Dead End is fabricated from a specially tempered aluminum that will transfer elevated current and dissipate increased heat more efficiently. The tongue and terminal pad are constructed with a 15° angle, which permits the terminal connector to be bolted in the straight or 30° position.

All HiTemp Dead Ends are designed for full tension use, achieving a minimum of 95% of the ASTM rated strength of the conductor. Each dead end assembly comes with terminal and aluminum hardware.

For die sizes 30AH and above, the end tapers of the compression portions of all compression accessories are supplied with a high voltage finish. Corona bolts are furnished as standard on 15° terminals for these die sizes.

The square edges of the bolted pads of the compression accessories could cause Corona. Pads with edges and corners rounded can be supplied by adding the catalog suffix "EHV".

Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Step 2: Terminal Connector

For an assembly without a terminal connector, use "NT".
For an assembly with a terminal connector, leave blank.

Step 3: Extra High Voltage Finish
For Extra High Voltage Finish, use "EHV". (≥ 345 kV)
For Standard Finish, leave blank. (< 345 kV)

Step 4: Assemble Catalog Number

Assy Catalog Number + **Terminal Connector** + **EHV Finish**

Example:
For 795 Drake ACSS Conductor with no terminal and EHV finish, the complete catalog number is:

E33142HTNTEHV

Notes:
1. Eye Dimensions are on page 378.
2. Pad Dimensions are on page 378.
3. HiTemp AFL Filler Compound (AFCHT) Requirements are on page 379.
4. Bolt Sizes and Torque Recommendations are on page 379.
5. Installation Instructions for Dead Ends start on page 384.
6. Installation Instructions for Terminals are on page 451.
7. For more information on die selection and ordering instructions, see the Tools and Equipment section of this catalog.

HiTemp Compression Dead End for ACSS Conductor, Eye Type, Single Tongue, 33100HT Series (cont.)

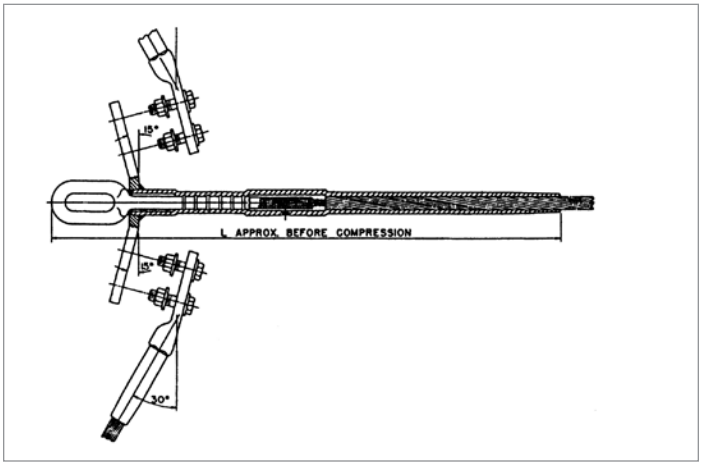
HiTemp Compression Dead End for ACSS Conductor, Eye Type, Double Tongue, 33300HT Series



The 33300HT Series Double Tongue Dead End Assembly is specifically designed for ACSS conductor. The body of the HiTemp Dead Ends are fabricated from a specially tempered aluminum that will transfer elevated current and dissipate increased heat more efficiently. The tongue and terminal pad are constructed with a 15° angle, which permits the terminal connector to be bolted in the straight or 30° position.

All HiTemp Dead Ends are designed for full tension use, achieving a minimum of 95% of the ASTM rated strength of the conductor. Each dead end assembly comes with two 15° terminals and aluminum hardware.

For die sizes 30AH and above, the end tapers of the compression portions of all compression accessories are supplied with a high voltage finish. Corona bolts are furnished as standard on 15° terminals for these die sizes.

The square edges of the bolted pads of the compression accessories could cause Corona. Pads with edges and corners rounded can be supplied by adding the catalog suffix "EHV".

Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Step 2: Terminal Connector

For an assembly without a terminal connector, use "NT".
For an assembly with a terminal connector, leave blank.

Step 3: Extra High Voltage Finish

For Extra High Voltage Finish, use "EHV". (≥ 345 kV)
For Standard Finish, leave blank. (< 345 kV)

Step 4: Assemble Catalog Number

Assy Catalog Number + **Terminal Connector** + **EHV Finish**

Example:

For 795 Drake ACSS Conductor with no terminal and EHV finish, the complete catalog number is:

E33342HTNTEHV

Notes:

1. Eye Dimensions are on page 378.
2. Pad Dimensions are on page 378.
3. HiTemp AFL Filler Compound (AFCHT) Requirements are on page 379.
4. Bolt Sizes and Torque Recommendations are on page 379.
5. Installation Instructions for Dead Ends start on page 384.
6. Installation Instructions for Terminals are on page 451.
7. For more information on die selection and ordering instructions, see the Tools and Equipment section of this catalog.

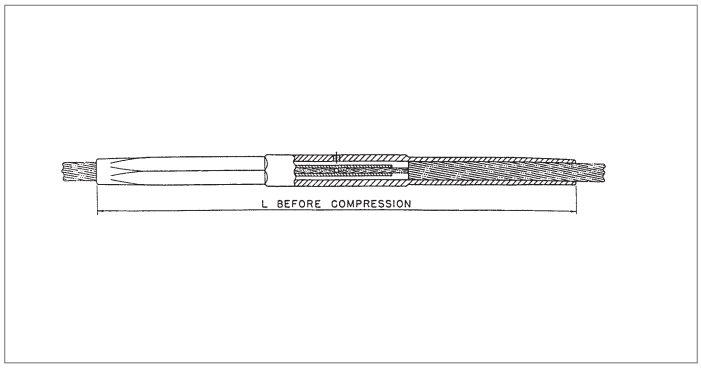
HiTemp Compression Joint for ACSS Conductor, 33000HT Series



The 33000HT Series Compression Joint Assembly is specifically designed for ACSS conductors. The HiTemp Compression Joint is fabricated from a specially tempered aluminum that will will transfer elevated current and dissipate increased heat more efficiently.

All HiTemp Compression Joints are designed for full tension use, achieving a minimum of 95% of the ASTM rated strength of the conductor. Each compression joint assembly comes with an aluminum joint and a steel sleeve.

For die sizes 30AH and above, the end tapers of the compression portions of all compression accessories are supplied with a high voltage finish.

Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Example:

For 795 Drake ACSS Conductor, the complete catalog number is:

33043HT

Notes:

1. HiTemp AFL Filler Compound (AFCHT) Requirements are on page 379.
2. Installation Instructions for Joints are on page 400.
3. For more information on die selction and ordering instructions, see the Tools and Equipment section of this catalog.

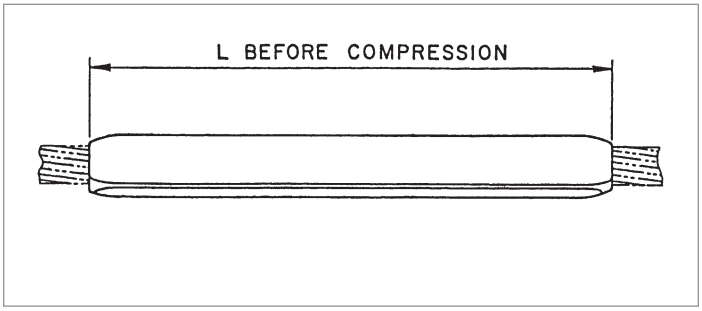
HiTemp Repair Sleeve for ACSS Conductor, 5200HT Series



The 5200HT Series Repair Sleeve is specifically designed for ACSS and ACSS/TW Conductor. The repair sleeves incorporate an improved design of interlocking extrusion, providing a permanent grip on the conductor when compressed. The repair sleeve will restore the cable to 95% of its rated strength with up to one-third of the aluminum strands damaged.

Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Example:

For 795 Drake ACSS Conductor, the complete catalog number is:

5230.3HT

NOTES:

1. Installation Instructions for Repair Sleeves are on page 412.
2. For more information on die selction and ordering instructions, see the Tools and Equipment section of this catalog.

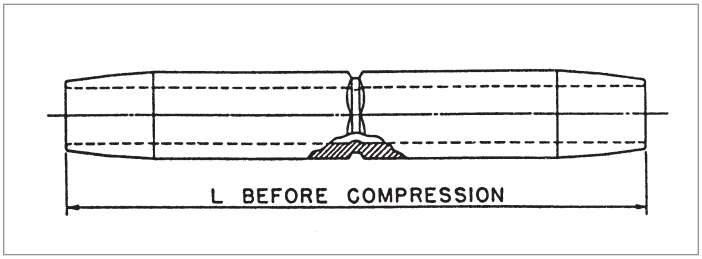
HiTemp Jumper Connector for ACSS Conductor, 5000HT Series



The 5000HT Series Jumper Connector is specifically designed for ACSS and ACSS/TW conductors. The HiTemp Jumper Connector is fabricated from a specially tempered aluminum that will transfer elevated current and dissipate increased heat more efficiently.

All HiTemp Jumper Connectors are designed for limited tension use, maintaining a minimum of 40% of the ASTM rated strength of the conductor. For die sizes 30AH and above, the end tapers of the compression portions of all compression accessories are supplied with a high voltage finish.

Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Example:

For 795 Drake ACSS Conductor, the complete catalog number is:

5030.116HT

Notes:

1. HiTemp AFL Filler Compound (AFCHT) Requirements are on page 379.
2. Installation Instructions for Jumper Connectors are on page 413.
3. For more information on die selction and ordering instructions, see the Tools and Equipment section of this catalog.

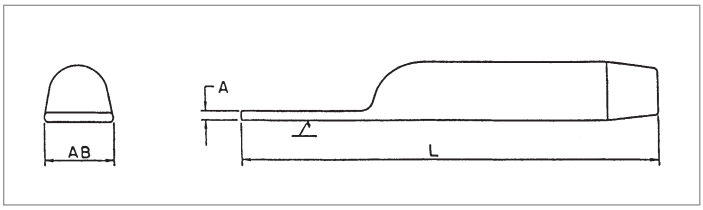
HiTemp Connector for ACSS Conductor, Straight, 5600HT Series



The 5600HT Series Straight Terminal Connector is specifically designed for ACSS conductors. It is fabricated from a specially tempered aluminum that will transfer elevated current and dissipate increased heat more efficiently.

All HiTemp Terminal Connectors are designed for limited tension use, maintaining a minimum of 40% of the ASTM rated strength of the conductor.

Square edges of the compression accessory pad can cause Corona. Pads with rounded edges and corners can be supplied by adding the catalog suffix 'EHV'.

Ordering Instructions

Step 1: Catalog Number

Determine the assembly catalog number based on the conductor being used

Step 2: Extra High Voltage Finish

For Extra High Voltage Finish, use "EHV". (≥ 345 kV)
For Standard Finish, leave blank. (< 345 kV)

Step 3: Assemble Catalog Number

Catalog Number + **EHV Finish**

Example:

For 795 Drake ACSS Conductor with an EHV finish, the complete catalog number is:

5630.116HTEHV

Notes:

1. Pad Dimensions are on page 378.
2. HiTemp AFL Filler Compound (AFCHT) Requirements are on page 379.
3. Bolt Sizes and Torque Recommendations are on page 379.
4. Installation Instructions for Terminals are on page 414.
5. For more information on die selction and ordering instructions, see the Tools and Equipment section of this catalog.

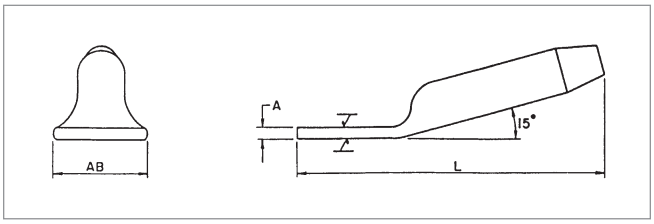
HiTemp Terminal Connector for ACSS Conductor, 15°, 5100HT Series



The 5100HT Series 15° Terminal Connector is specifically designed for ACSS conductors. It is fabricated from a specially tempered aluminum that will transfer elevated current and dissipate increased heat more efficiently.

When used with the HiTemp Dead End, the 15° terminal connector can be bolted in either the straight or 30° position. All HiTemp Terminal Connectors are designed for limited tension use, maintaining a minimum of 40% of the ASTM rated strength of the conductor. Aluminum hardware is supplied with the 15° terminal connector.

Square edges of the compression accessory pad can cause Corona. Pads with rounded edges and corners can be supplied by adding the catalog suffix 'EHV'.

Ordering Instructions

Step 1: Catalog Number

Determine the assembly catalog number based on the conductor being used.

Step 2: Extra High Voltage Finish

For Extra High Voltage Finish, use "EHV". (≥ 345 kV)
For Standard Finish, leave blank. (< 345 kV)

Step 3: Assemble Catalog Number

Catalog Number + **EHV Finish**

Example:

For 795 Drake ACSS Conductor with an EHV finish, the complete catalog number is:

5130.116HTEHV

Notes:

1. Pad Dimensions are on page 378.
2. HiTemp AFL Filler Compound (AFCHT) Requirements are on page 379.
3. Bolt Sizes and Torque Recommendations are on page 379.
4. Installation Instructions for Terminals are on page 414.
5. For more information on die selction and ordering instructions, see the Tools and Equipment section of this catalog.

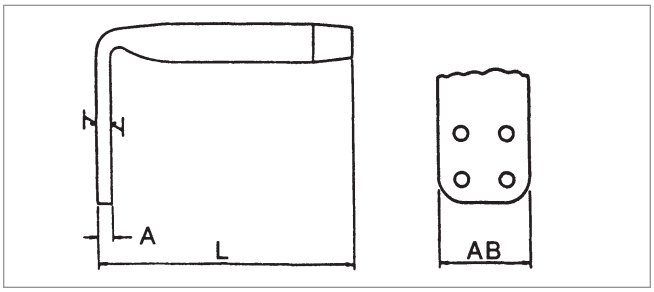
HiTemp Terminal Connector for ACSS Conductor, 90º, 5800HT Series



The 5800HT Series 90º Terminal Connector is specifically designed for ACSS conductors. It is fabricated from a specially tempered aluminum that will transfer elevated current and dissipate increased heat more efficiently.

All HiTemp Terminal Connectors are designed for limited tension use, maintaining a minimum of 40% of the ASTM rated strength of the conductor.

Square edges of the compression accessory pad can cause Corona. Pads with rounded edges and corners can be supplied by adding the catalog suffix 'EHV'.

Ordering Instructions

Step 1: Catalog Number

Determine the assembly catalog number based on the conductor being used.

Step 2: Extra High Voltage Finish

For Extra High Voltage Finish, use "EHV". (≥ 345 kV)
For Standard Finish, leave blank. (< 345 kV)

Step 3: Assemble Catalog Number

Catalog Number + **EHV Finish**

Example:

For 795 Drake ACSS Conductor with an E pad and EHV finish, the complete catalog number is:

5830.116HTEEHV

Notes:

1. Pad Dimensions are on page 378.
2. HiTemp AFL Filler Compound (AFCHT) Requirements are on page 379.
3. Bolt Sizes and Torque Recommendations are on page 379.
4. Installation Instructions for Terminals are on page 414.
5. For more information on die selction and ordering instructions, see the Tools and Equipment section of this catalog.

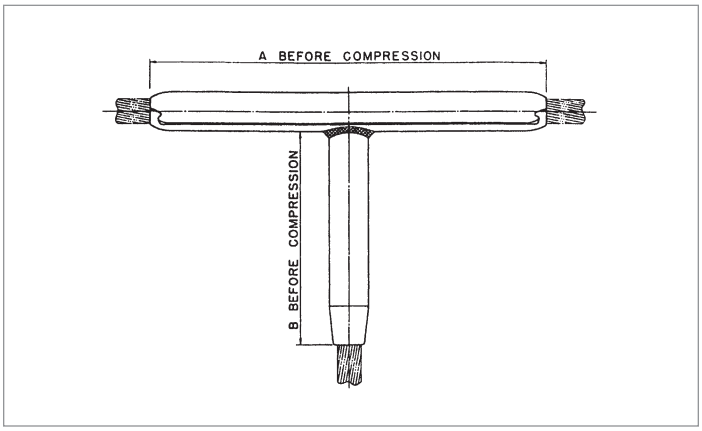
HiTemp Tee Connector for ACSS Conductor, Open Run, 5500HT Series



The 5500HT Series Tee Connector is a permanent drop specifically designed for ACSS conductors. It is fabricated from a specially tempered aluminum that will transfer elevated current and dissipate increased heat more efficiently.

The run portion incorporates an improved design of interlocking extrusions, providing a permanent grip on the conductor when compressed.

The branch portion of the tee connector is designed for limited tension use, maintaining a minimum of 40% of the ASTM rated strength of the conductor.

For die sizes 30AH and above, the end tapers of the compression portions of all compression accessories are supplied with a high voltage finish.

Ordering Instructions

Step 1: Determine Run Catalog Number

Determine the run catalog number based on the conductor being used.

Step 2: Determine Branch Catalog Number

Determine the branch catalog number based on the conductor being used.

Step 3: Assemble Catalog Number

Run Catalog Number + **Branch Catalog Number**

Example:

For a Tee Connector with a run conductor of 795 Drake ACSS Conductor and a branch conductor of 954 Cardinal ACSS Conductor, the complete catalog number is:

5530.3-30.125HT

Notes:

1. HiTemp AFL Filler Compound (AFCHT) Requirements are on page 379.
2. Installation Instructions for Tee Connectors are on page 416.

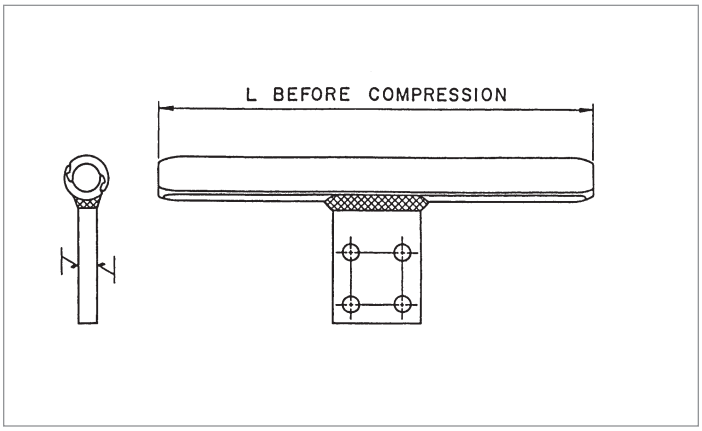
HiTemp Tee Tap for ACSS Conductor, Open Run, 5300HT Series



The 5300HT Series Tee Tap is a permanent or temporary drop specifically designed for ACSS conductors. It is fabricated from a specially tempered aluminum that will transfer elevated current and dissipate increased heat more efficiently.

The run portion incorporates an improved design of interlocking extrusions, providing a permanent grip on the conductor when compressed.

For die sizes 30AH and above, the end tapers of the compression portions of all compression accessories are supplied with a high voltage finish.

Square edges of the compression accessory pad can cause Corona. Pads with rounded edges and corners can be supplied by adding the catalog suffix "EHV".

Ordering Instructions

Step 1: Catalog Number

Determine the catalog number based on the conductor being used.

Step 2: Extra High Voltage Finish

For Extra High Voltage Finish, use "EHV". (≥ 345 kV)
For Standard Finish, leave blank. (< 345 kV)

Step 3: Assemble Catalog Number

Catalog Number + **EHV Finish**

Example:

For 795 Drake ACSS Conductor with EHV finish, the complete catalog number is:

5330.3HTEHV

Notes:
1. Pad Dimensions are on page 378.
2. HiTemp AFL Filler Compound (AFCHT) Requirements are on page 379.
3. Bolt Sizes and Torque Recommendations are on page 379.

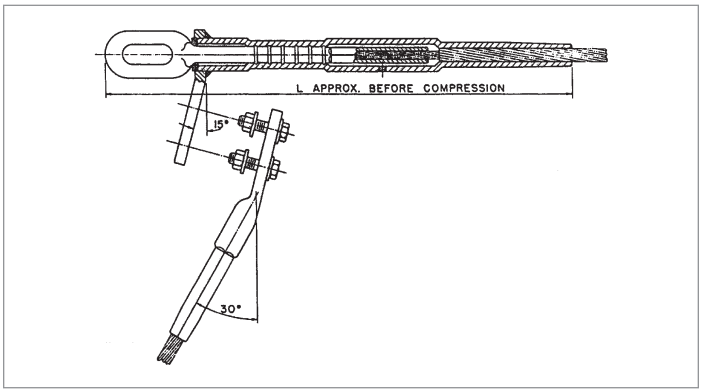
HiTemp Compression Dead End for ACSS/TW Conductor, Eye Type, Single Tongue, 440000HT Series



The 440000HT Series Dead End Assembly is specifically designed for ACSS/TW conductor. The body of the HiTemp Dead Ends are fabricated from a specially tempered aluminum that will transfer elevated current and dissipate increased heat more efficiently. The tongue and terminal pad are constructed with a 15° angle, which permits the terminal connector to be bolted in the straight or 30° position.

All HiTemp Dead Ends are designed for full tension use, achieving a minimum of 95% of the ASTM rated strength of the conductor. Each dead end assembly comes with a terminal and aluminum hardware.

For die sizes 30AH and above, the end tapers of the compression portions of all compression accessories are supplied with a high voltage finish. Corona bolts are furnished as standard on 15° terminals for these die sizes.

The square edges of the bolted pads of the compression accessories could cause Corona. Pads with edges and corners rounded can be supplied by adding the catalog suffix "EHV".

Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Step 2: Terminal Connector

For an assembly without a terminal connector, use "NT".
For an assembly with a terminal connector, leave blank.

Step 3: Extra High Voltage Finish

For Extra High Voltage Finish, use "EHV". (≥ 345 kV)
For Standard Finish, leave blank. (< 345 kV)

Step 4: Assemble Catalog Number

Assy Catalog Number + **Terminal Connector** + **EHV Finish**

Example:

For 954 Cardinal ACSS/TW Conductor with no terminal and EHV finish, the complete catalog number is:

E441084HTNTEHV

Notes:

1. Eye Dimensions are on page 378.
2. Pad Dimensions are on page 378.
3. HiTemp AFL Filler Compound (AFCHT) Requirements are on page 379.
4. Bolt Sizes and Torque Recommendations are on page 379.
5. Installation Instructions for Dead Ends start on page 384.
6. Installation Instructions for Terminals are on page 414.
7. For more information on die selection and ordering instructions, see the Tools and Equipment section of this catalog.

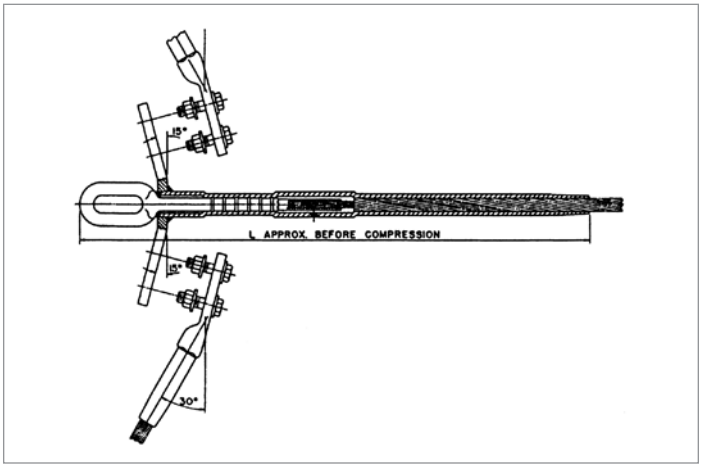
HiTemp Compression Dead End for ACSS/TW Conductor, Eye Type, Double Tongue, 480000HT Series



The 480000HT Series Double Tongue Dead End Assembly is specifically designed for ACSS/TW conductor. The body of the HiTemp Dead Ends are fabricated from a specially tempered aluminum that will transfer elevated current and dissipate increased heat more efficiently. The tongue and terminal pad are constructed with a 15° angle, which permits the terminal connector to be bolted in the straight or 30° position.

All HiTemp Dead Ends are designed for full tension use, achieving a minimum of 95% of the ASTM rated strength of the conductor. Each dead end assembly comes with two 15° terminals and aluminum hardware.

For die sizes 30AH and above, the end tapers of the compression portions of all compression accessories are supplied with a high voltage finish. Corona bolts are furnished as standard on 15° terminals for these die sizes.

The square edges of the bolted pads of the compression accessories could cause Corona. Pads with edges and corners rounded can be supplied by adding the catalog suffix "EHV".

Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Step 2: Terminal Connector

For an assembly without a terminal connector, use "NT".
For an assembly with a terminal connector, leave blank.

Step 3: Extra High Voltage Finish

For Extra High Voltage Finish, use "EHV". (≥ 345 kV)
For Standard Finish, leave blank. (< 345 kV)

Step 4: Assemble Catalog Number

Assy Catalog Number + **Terminal Connector** + **EHV Finish**

Example:

For 954 Cardinal ACSS/TW Conductor with no terminal and EHV finish, the complete catalog number is:

E481084HTNTEHV

Notes:

1. Eye Dimensions are on page 378.
2. Pad Dimensions are on page 378.
3. HiTemp AFL Filler Compound (AFCHT) Requirements are on page 379.
4. Bolt Sizes and Torque Recommendations are on page 379.
5. Installation Instructions for Dead Ends start on page 384.
6. Installation Instructions for Terminals are on page 414.
7. For more information on die selection and ordering instructions, see the Tools and Equipment section of this catalog.

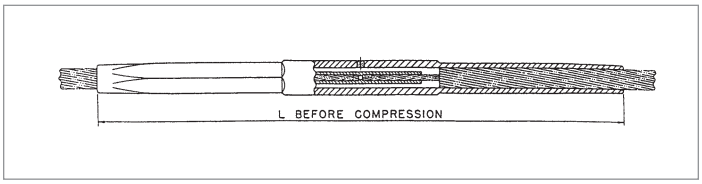
HiTemp Compression Joint for ACSS/TW Conductor, 420000HT Series



The 420000HT Series Compression Joint Assembly is specifically designed for ACSS/TW conductors. The HiTemp Compression Joints are fabricated from a specially tempered aluminum that will transfer elevated current and dissipate increased heat more efficiently.

All HiTemp Compression Joints are designed for full tension use, achieving a minimum of 95% of the ASTM rated strength of the conductor. Each compression joint assembly comes with an aluminum joint and a steel sleeve.

For die sizes 30AH and above, the end tapers of the compression portions of all compression accessories are supplied with a high voltage finish.

Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Example:

For 954 Cardinal ACSS/TW Conductor, the complete catalog number is:

421084HT

Notes:

1. HiTemp AFL Filler Compound (AFCHT) Requirements are on page 379.
2. Installation Instructions for Joints are on page 400.
3. For more information on die selection and ordering instructions, see the Tools and Equipment section of this catalog.

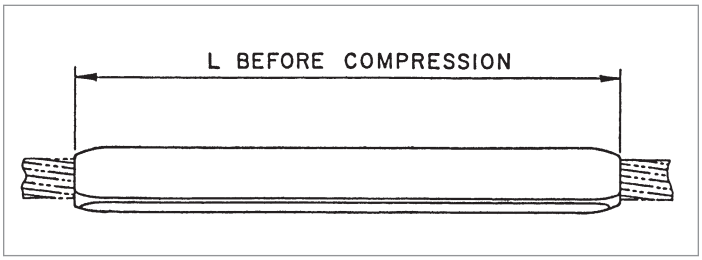
HiTemp Repair Sleeve for ACSS/TW Conductor, 5200HT Series



The 5200HT Series Repair Sleeve is specifically designed for ACSS and ACSS/TW Conductor. The repair sleeves incorporate an improved design of interlocking extrusion, providing a permanent grip on the conductor when compressed. The repair sleeve will restore the cable to 95% of its rated strength with up to one-third of the aluminum strands damaged.

Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Example:

For 954 Cardinal ACSS/TW Conductor, the complete catalog number is:

5230.3HT

NOTES:

1. Installation Instructions for Repair Sleeves are on page 412.
2. For more information on die selction and ordering instructions, see the Tools and Equipment section of this catalog.

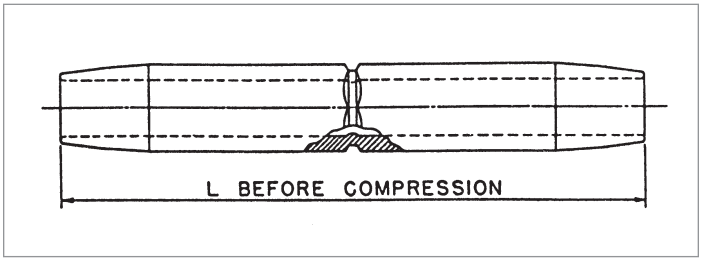
HiTemp Jumper Connector for ACSS/TW Conductor, 5000HT Series



The 5000HT Series Jumper Connector is specifically designed for ACSS and ACSS/TW conductors. The HiTemp Jumper Connector is fabricated from a specially tempered aluminum that will transfer elevated current and dissipate increased heat more efficiently. All HiTemp Jumper Connectors are designed for limited tension use, maintaining a minimum of 40% of the ASTM rated strength of the conductor. For die sizes 30AH and above, end tapers of the compression portions of all compression accessories are supplied with a high voltage finish.

Ordering Instructions

Step 1: Assembly Catalog Number

Determine the assembly catalog number based on the conductor being used.

Example:

For 954 Cardinal ACSS/TW Conductor, the complete catalog number is:

5030.125HT

Notes:

1. HiTemp AFL Filler Compound (AFCHT) Requirements are on page 379.
2. Installation Instructions for Jumper Connectors are on page 413.
3. For more information on die selction and ordering instructions, see the Tools and Equipment section of this catalog.

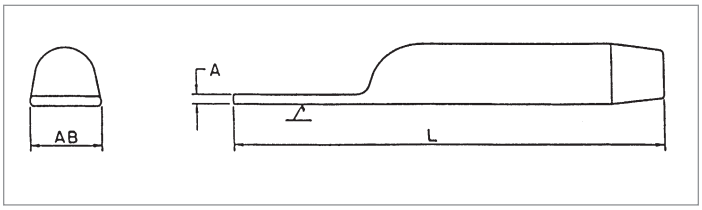
HiTemp Connector—Straight for ACSS/TW Conductor, 5600HT Series



The 5600HT Series Straight Terminal Connector is specifically designed for ACSS/TW conductors. It is fabricated from a specially tempered aluminum that will transfer elevated current and dissipate increased heat more efficiently.

All HiTemp Terminal Connectors are designed for limited tension use, maintaining a minimum of 40% of the ASTM rated strength of the conductor.

Square edges of the compression accessory pad can cause Corona. Pads with rounded edges and corners can be supplied by adding the catalog suffix 'EHV'.

Ordering Instructions

Step 1: Catalog Number

Determine the assembly catalog number based on the conductor being used

Step 2: Extra High Voltage Finish

For Extra High Voltage Finish, use "EHV". (≥ 345 kV)
For Standard Finish, leave blank. (< 345 kV)

Step 3: Assemble Catalog Number

Catalog Number + **EHV Finish**

Example:

For 954 Cardinal ACSS/TW Conductor with an EHV finish, the complete catalog number is:

5630.125HTEHV

Notes:

1. Pad Dimensions are on page 378.
2. HiTemp AFL Filler Compound (AFCHT) Requirements are on page 379.
3. Bolt Sizes and Torque Recommendations are on page 379.
4. Installation Instructions for Terminals are on page 414.
5. For more information on die selction and ordering instructions, see the Tools and Equipment section of this catalog.

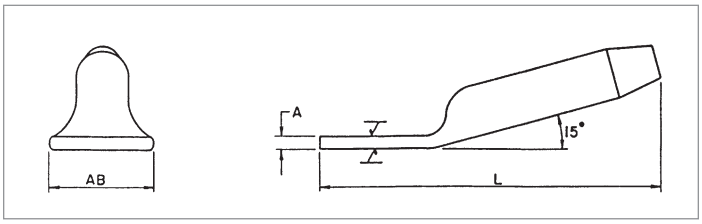
HiTemp Terminal Connector—15° for ACSS/TW Conductor, 5100HT Series



The 5100HT Series 15° Terminal Connector is specifically designed for ACSS/TW conductors. It is fabricated from a specially tempered aluminum that will transfer elevated current and dissipate increased heat more efficiently.

When used with the HiTemp Dead End, the 15° terminal connector can be bolted in either the straight or 30° position. All HiTemp Terminal Connectors are designed for limited tension use, maintaining a minimum of 40% of the ASTM rated strength of the conductor. Aluminum hardware is supplied with the 15° terminal connector.

Square edges of the compression accessory pad can cause Corona. Pads with rounded edges and corners can be supplied by adding the catalog suffix 'EHV'.

Ordering Instructions

Step 1: Catalog Number

Determine the assembly catalog number based on the conductor being used.

Step 2: Extra High Voltage Finish

For Extra High Voltage Finish, use "EHV". (≥ 345 kV)
For Standard Finish, leave blank. (< 345 kV)

Step 3: Assemble Catalog Number

Catalog Number + **EHV Finish**

Example:

For 954 Cardinal ACSS/TW Conductor with an EHV finish, the complete catalog number is:

5130.125HTEHV

Notes:

1. Pad Dimensions are on page 378.
2. HiTemp AFL Filler Compound (AFCHT) Requirements are on page 379.
3. Bolt Sizes and Torque Recommendations are on page 379.
4. Installation Instructions for Terminals are on page 414.
5. For more information on die selction and ordering instructions, see the Tools and Equipment section of this catalog.

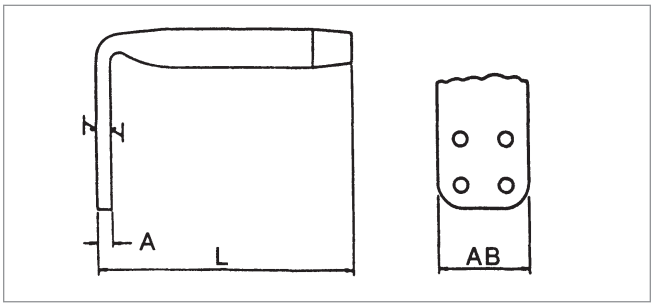
HiTemp Terminal Connector—90º for ACSS/TW Conductor, 5800HT Series



The 5800HT Series 90º Terminal Connector is specifically designed for ACSS/TW conductors. It is fabricated from a specially tempered aluminum that will transfer elevated current and dissipate increased heat more efficiently.

All HiTemp Terminal Connectors are designed for limited tension use, maintaining a minimum of 40% of the ASTM rated strength of the conductor.

Square edges of the compression accessory pad can cause Corona. Pads with rounded edges and corners can be supplied by adding the catalog suffix 'EHV'.

Ordering Instructions

Step 1: Catalog Number

Determine the assembly catalog number based on the conductor being used.

Step 2: Extra High Voltage Finish

For Extra High Voltage Finish, use "EHV". (≥ 345 kV)
For Standard Finish, leave blank. (< 345 kV)

Step 3: Assemble Catalog Number

Catalog Number + **EHV Finish**

Example:

For 954 Cardinal ACSS/TW Conductor with an EHV finish, the complete catalog number is:

5830.125HTEHV

Notes:

1. Pad Dimensions are on page 378.
2. HiTemp AFL Filler Compound (AFCHT) Requirements are on page 379.
3. Bolt Sizes and Torque Recommendations are on page 379.
4. Installation Instructions for Terminals are on page 414.
5. For more information on die selction and ordering instructions, see the Tools and Equipment section of this catalog.

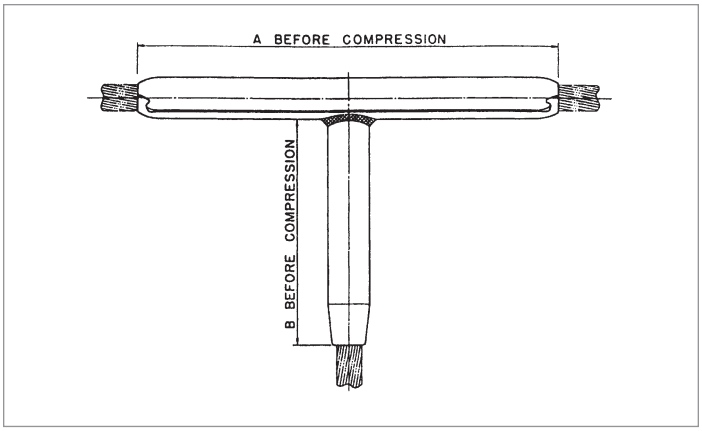
HiTemp Tee Connector—Open Run for ACSS/TW Conductor, 5500HT Series



The 5500HT Series Tee Connector is a permanent drop specifically designed for ACSS/TW conductors. It is fabricated from a specially tempered aluminum that will transfer elevated current and dissipate increased heat more efficiently.

The run portion incorporates an improved design of interlocking extrusions, providing a permanent grip on the conductor when compressed.

The branch portion of the tee connector is designed for limited tension use, maintaining a minimum of 40% of the ASTM rated strength of the conductor.

For die sizes 30AH and above, the end tapers of the compression portions of all compression accessories are supplied with a high voltage finish.

Ordering Instructions

Step 1: Determine Run Catalog Number

Determine the run catalog number based on the conductor being used.

Step 2: Determine Branch Catalog Number

Determine the branch catalog number based on the conductor being used.

Step 3: Assemble Catalog Number

Run Catalog Number + **Branch Catalog Number**

Example:

For a Tee Connector with a run conductor of 954 Cardinal ACSS/TW Conductor and a branch conductor of 1192.5 Gracklel ACSS/TW Conductor, the complete catalog number is:

5530.3-36.144HT

Notes:

1. HiTemp AFL Filler Compound (AFCHT) Requirements are on page 379.
2. Installation Instructions for Tee Connectors are on page 416.

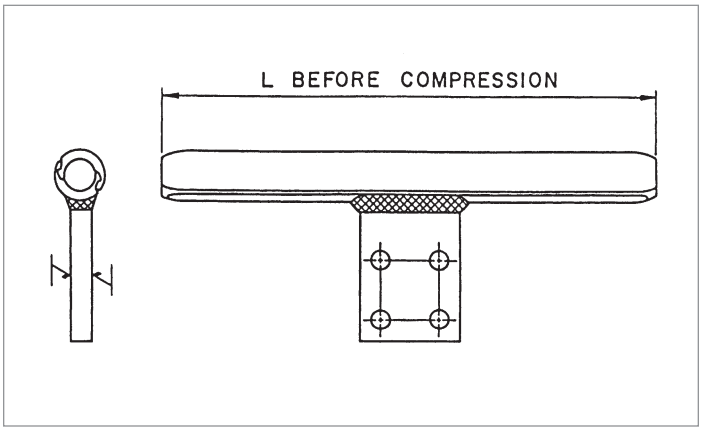
HiTemp Tee Tap—Open Run for ACSS/TW Conductor, 5300HT Series



The 5500HT Series Tee Tap is a permanent or temporary drop specifically designed for ACSS/TW conductors. It is fabricated from a specially tempered aluminum that will transfer elevated current and dissipate increased heat more efficiently.

The run portion incorporates an improved design of interlocking extrusions, providing a permanent grip on the conductor when compressed.

For die sizes 30AH and above, the end tapers of the compression portions of all compression accessories are supplied with a high voltage finish.

Square edges of the compression accessory pad can cause Corona. Pads with rounded edges and corners can be supplied by adding the catalog suffix 'EHV'.

Ordering Instructions

Step 1: Catalog Number

Determine the catalog number based on the conductor being used.

Step 2: Extra High Voltage Finish

For Extra High Voltage Finish, use "EHV". (≥ 345 kV)
For Standard Finish, leave blank. (< 345 kV)

Step 3: Assemble Catalog Number

Catalog Number + **EHV Finish**

Example:

For 954 Cardinal ACSS/TW Conductor with EHV finish, the complete catalog number is:

5330.3HTEHV

Notes:
1. Pad Dimensions are on page 378.
2. HiTemp AFL Filler Compound (AFCHT) Requirements are on page 379.
3. Bolt Sizes and Torque Recommendations are on page 379.
4. Installation Instructions for Tee Taps are on page 416.

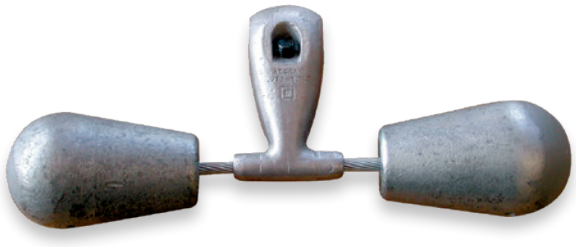
Transmission Conductor Vibration Dampers, Stockbridge Type—1700 Series



The AFL Stockbridge Damper is the most efficient way to extend the life of a transmission line. It is designed to eliminate the damage caused by aeolian vibration.

What is Aeolian Vibration?

Aeolian vibration is a high frequency motion that can occur when a smooth, steady crosswind blows on aerial cables. This laminar wind creates vortices, which are detached at regular intervals on the leeward side, alternating from top and bottom of the cable. The detachments create vertical forces causing the cable to vibrate standing waves generally in high harmonic modes. The primary factors effecting aeolian vibration are span length, tension and impedance. The amount of energy imparted to a cable varies directly with the span length. With increasing tension, the tendency of a cable to vibrate rises rapidly as its self dampening ability reduces. Impedance is determined by the mechanical and material properties of the cable.

The first aeolian vibration fatigue failures of stranded conductor were reported in 1917. George Stockbridge of Southern California Edison first developed dampers in 1928. During this same timeframe, an outdoor test span and indoor laboratory was erected for the study of vibration. These expanded facilities, along with more than 70 years of research and experience, have assisted AFL in understanding the theory of vibration and its control. Aeolian vibration still occurs and causes damage to conductors, hardware and towers. AFL Stockbridge Dampers dissipates this damaging force of nature.

Features

Wide Vibration and Voltage Coverage

The AFL Stockbridge Damper has two natural frequency modes. These modes are commonly known as 'flying' and 'wiggling'. AFL uses a specially designed 19 strand messenger wire allowing the damper to dissipate vibration, or 'wake up', at lower energy inputs. These two modes combined with the 19 strand messenger wire give AFL's Stockbridge Damper the widest range of vibration coverage in the industry. Damper assemblies with catalog weights of 1706 and larger can be used at 345 kV and above.

Pressed Clamp and Weights

AFL Stockbridge Damper clamp and weights are pressed onto the messenger wire, as opposed to being cast or welded. The pressing operation does not alter the physical or mechanical characteristics of the messenger wire. Casting or welding anneals the messenger, compromising its performance.

No Special Tools Needed with Breakaway Bolt Option

With the breakaway bolt, no special tools or torque wrench is needed. Simply tighten the bolt until the head shears off. This means proper torque has been achieved.

Proven Performance Year After Year

Comparative testing was conducted in 1993 at a private test site using AFL Stockbridge Dampers and those of two competitors. In this particular test, AFL dampers offered 40+ years of protection against fatigue, while the competitions' dampers failed between 7 and 14 years.

Dampers for T2 Conductors

AFL has developed a special clamp insert that allows the damper to be firmly secured to a T2 conductor. See page 394 for an illustration of the damper and the attachment. Please contact our engineering department for applications involving T2 Conductor.

High Temperature Application

The standard Stockbridge Damper is designed for 250ºC high temperature applications without the need for Armor Rods.

Vibrec® Damper Recommendation Program

The Vibrec damper recommendation program assists in damper requirements for transmission and distribution lines.
For more information visit www.Vibrec.com or contact the AFL Technical Support Team at 1.800.866.7385.

Vibration Recommendation Form can be found on page 467.

-18 [3]	2.158 - 2.375	54.8 - 60.3	5/8	2.4	1.09
-19 [3]	2.376 - 2.614	60.4 - 66.4	5/8	2.4	1.09

Notes:

1. Steel weight shown in Table 1 includes both damper weights and other steel parts used. For complete weight of damper assembly, add partial weights shown in Tables 1 and 2.
2. Damper assemblies with 1706, 1707, or 1708 weight catalog numbers and -9 clamp catalog numbers or larger can be used at 345 kV and above.
3. Regular aluminum hexagon head bolts are standard on assemblies that have 1705 weights and smaller. Assemblies having 1706 weights and larger have special Corona hexagon head bolts.
4. For conductor sizes not covered in the table, consult AFL Technical Support Team at 1.800.866.7385.
5. Installation Instructions for vibration dampers, see page 417.

Ordering Instructions

Step 1: Determine Conductor Diameter

All damper ordering is based on the diameter of the conductor being used.

Step 2: Select Weight Catalog Number

Use Table 1 to select the correct weight catalog number based on the diameter of the bare conductor being used.

Step 3: Select Clamp Catalog Number

Before selecting a Clamp, ask one question: "Does this application use armor rods?"

If yes, select the correct clamp catalog number from Table 2 based on the total diameter of the conductor and the armor rods.

If no, select the correct clamp catalog number from Table 2 based on the diameter of the bare conductor being used.

Step 4: Select Bolts

For breakaway bolts, use 'BA'. For standard bolts, leave blank.

Note: Breakaway bolts may not be corona free at voltages 345 kV and above.

Step 5: Create Catalog Number

Weight Catalog Number + **Clamp Catalog Number** + **Bolts**

Example:

Without Armor Rods

Conductor Diameter: 1.108" (28.1 mm)
Weight Size from Table 1: 1706
Clamp Size from table 2: -10
Bolts: Breakaway
Catalog Number: 1706-10BA

With Armor Rods

Conductor Diameter: 1.108" (28.1 mm)
Weight Size from Table 1: 1706
Diameter of Conductor and Armor Rods: 1.728" (43.9 mm)
Clamp Size from table 2: -15

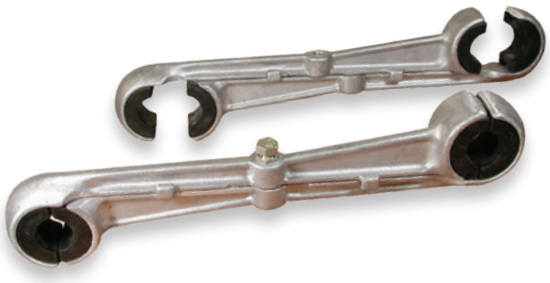
Catalog Number: 1706-15

HiTemp Speed-Grip® Spacers for Two Bundle Conductors



The trend toward higher transmission voltages and load currents has brought many changes in line construction. High temperature spacers are necessary on horizontal bundle construction to prevent damage from wake-induced oscillation, ice unloading and short circuit clashing. AFL's HiTemp Speed-Grip Spacer employs elastomer bushed clamps to firmly grip the conductor while eliminating possible fatigue breaks of the fully annealed aluminum strand. It is specially designed to allow rapid installation without special tools.

What is wake-induced oscillation?

Wake-Induced Oscillation is a swinging motion, like a pendulum, that is caused when wind blows across a bundle of conductors. As the conductors move back and forth, there is a potential of the conductors to touch, thus causing significant damage. AFL has been researching oscillation to understand it and has developed improved accessories to control it.

Features

High Temperature Applications

AFL has designed a special clamp insert to withstand the elevated temperatures of high temperature conductors. Two units are currently available for 200°C and 250°C. The 200°C unit is designated by adding the suffix "MT" to the part number. (i.e. 3326MT). Please contact our engineering department for performance data on these two units.

Fully Assembled

The HiTemp Speed-Grip Spacer is ready for immediate installation. The bushings are seated, frames interlocked and the wedge-lock bolt in place.

Quick Installation

With no loose parts, whether from a helicopter, spacer cart or bucket, the HiTemp Speed-Grip spacer takes seconds to install.

No Special Tools

With the wedge-lock breakaway bolt, no special tool or torque wrench is needed. Simply tighten the bolt until the head shears off, indicating proper torque has been achieved.

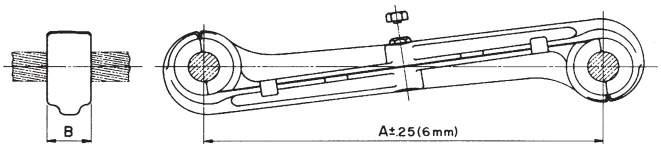
Customized Design

The HiTemp Speed-Grip spacer is designed with a standard 18 inch spacing. For applications requiring other spacing dimensions, contact the AFL Technical Support Team.

Vibrec® Damper & Spacer Recommendation Program

The Vibrec damper recommendation program assists in HiTemp Speed-Grip Spacer requirements for transmission lines. For more information contact the AFL at 1.800.866.7385.

HiTemp Speed-Grip® Spacers for Two Bundle Conductors—3300HT Series (cont.)



The 3300HT Series Speed-Grip™ Spacers are specially designed for ACSS and ACSS/TW conductors. The product comes fully assembled with no loose parts. The wedge lock break-away bolt requires no special tools to tighten. Unless otherwise requested, standard spacing is 18 inches.

Ordering Information

Speed-Grip Spacers are ordered by catalog number corresponding to the conductor diameter.

Example:

For 795 Drake ACSS Conductor operating at 250°C, the Speed-Grip Spacer catalog number would be:

3310HT

Notes:

1. For installation instructions for speed-grip spacers, see page 421.
2. For conductor diameters, see pages 380-383.

HiTemp AFL Filler Compound Requirements For ACSS and ACSS/TW Conductors

A filler port and plug are provided on the dead ends and joints for ACSS and ACSS/TW conductors. The chart below shows the recommended approximate amount of HiTemp AFL Filler Compound (AFCHT) required for each accessory.
AFCHT is available in various packages and sizes. It can be ordered in one-pound tubes with nozzle for a standard caulking gun or it can be ordered in bulk for use in pressure guns. For recommendations about compounds, contact AFL at 1.800.866.7385.

Notes:

1. The amount of compound shown in the table above is for the purpose of estimating the amount of compound necessary for a construction project. The tabulated weights of filler compound shown in the above tables for the Catalog 5100HT, 5600HT and 5800HT terminals does not include sufficient quantity to fill the cavity area at the transition of the barrel. If the terminal is installed with the barrel in the upright position, it is imperative that an additional quantity of compound be used to fill the cavity area.
2. 5500HT amounts do not include compound for the tap. Add amount required for the 5100HT Series Terminal Connector of the same die size.

Notes:

1. Data based on a nominal cable manufactured in accordance with ASTM B 857.
2. Resistance and ampacity based on an aluminum conductivity of 63%, IACS at 20°C, and a steel conductivity of 8% IACS at 20°C.
3. Ampacity based on a 200°C conductor temperature, 25°C ambient temperature, 2 ft/sec. wind, in sun, with emissivity of 0.5 and a coefficient of solar absorption of 0.5, at sea level.
4. Rated strengths based on Class A galvanized steel core wire in accordance with ASTM B 498.

Notes:

1. Data based on a nominal cable manufactured in accordance with ASTM B 857.
2. Resistance and ampacity based on an aluminum conductivity of 63%, IACS at 20°C, and a steel conductivity of 8% IACS at 20°C.
3. Ampacity based on a 200°C conductor temperature, 25°C ambient temperature, 2 ft/sec. wind, in sun, with emissivity of 0.5 and a coefficient of solar absorption of 0.5,at sea level.
4. Rated strengths based on Class A galvanized steel core wire in accordance with ASTM B 498.

Installation Instructions

for AFL Dead End

For Use on Overhead Conductor Types

ACSR, ACSS, ACSS/TW

NOTE:

Preparation

Prior to making connections, the conductor and accessory bore must be clean.

NOTE: Improper cleaning of conductor strands can result in higher resistance dead ends; this causes the fittings to operate at higher temperatures leading to premature failure.

Clean conductor strands thoroughly by using one of the methods below:

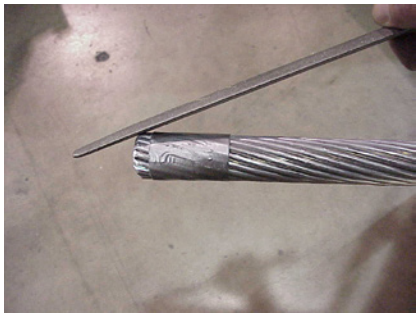
Method 1 – ConductaClean® System (Recommended)
ConductaClean solution cleans ends of overhead conductor prior to assembly and removes oxidation and contaminants from strands.

See information on ConductaClean at AFLglobal.com or call: 800-866-7385 Ref: Transmission tool CCP-SYS_T.

Method 2 – Wire Brush
Clean conductor strands thoroughly with wire brush. Wire brush "New" conductor also.

Check accessory bore for foreign particles, removing if present.

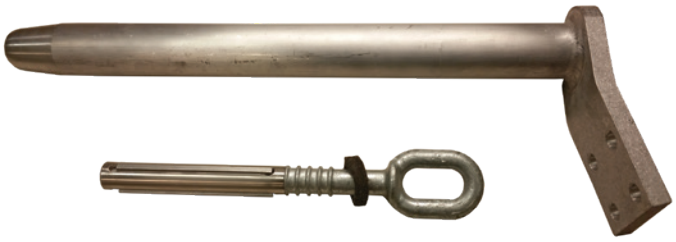
Follow Installation Instructions carefully. Improper installation can result in mechanical failure of the cable system and possible injury to persons handling or in the vicinity of the cable system.



Prior to cutting, wrap tape around the conductor to help maintain the round contour, making it easier to slide the end through the aluminum dead end. File approximately 0.09 inch chamfer on the end of the conductor. (The larger the chamfer, the easier the conductor will slide through).

Straighten several feet of the conductor removing the set caused by the reel.

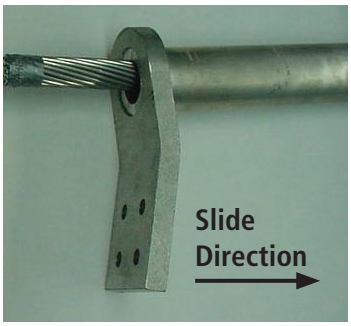
Assembly



Dead end assemblies consist of an aluminum body and steel eye/"core grip". (Felt washer is included as part of steel eye.)

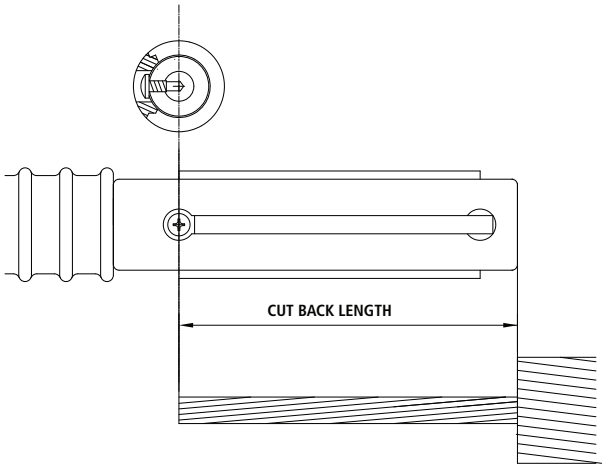
STEEL EYE/"CORE GRIP"

ALUMINUM BODY

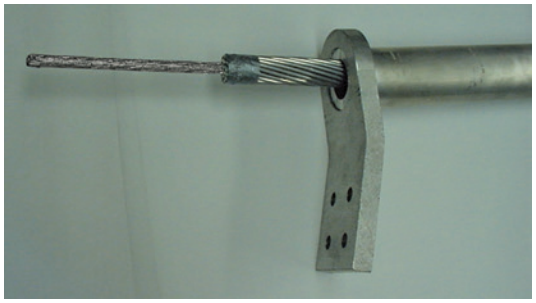


Slide aluminum dead end body (barrel first) over the conductor until sufficient working length protrudes from tongue end.

Cutting Back Aluminum Strands for Installation of Steel Eye/"Core Grip"



NOTE: It is extremely important not to nick the core strands during cutting back of the aluminum strands. If this is done, the ultimate strength of the dead end will be reduced. The cable manufacturer suggests the following method of cutting back the strands.



Suggested Method of Cutting Back Aluminum Strands

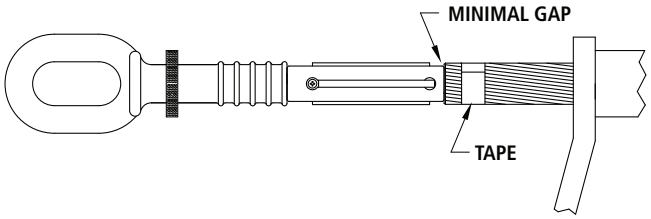
1. Tape location where "cutting back" is needed.
2. Position RIGID cable trimmer around conductor at the tape location.
3. Cut outer aluminum strands by rotating tool until layer becomes loose.
4. Remove cut outer aluminum layer strand.
5. Bend inner layer wires back and forth until they fracture.
6. Remove the broken wires.

Suggested Arrangement of Compressor and Accessory During Field Installation of Dead End

The photo at right illustrates a setup, which works well to ensure a straight compression and easy maneuverability of the compressor. The conductor has been "tied off" to the tower with a sling and chain wench. The compressor is then attached to the sling by a large shackle (The compressor is suspended upside down). The accessory and cable are tied to the sling ensuring all parts are straight and in-line. The compressor can easily be slid along to each successive compression.

File chamfer on end of core to remove burrs and sharp edge. Chamfer will reduce the expanded diameter of the core (due to cutting) and ease the installation of the Steel Eye/"Core Grip".

Assembly

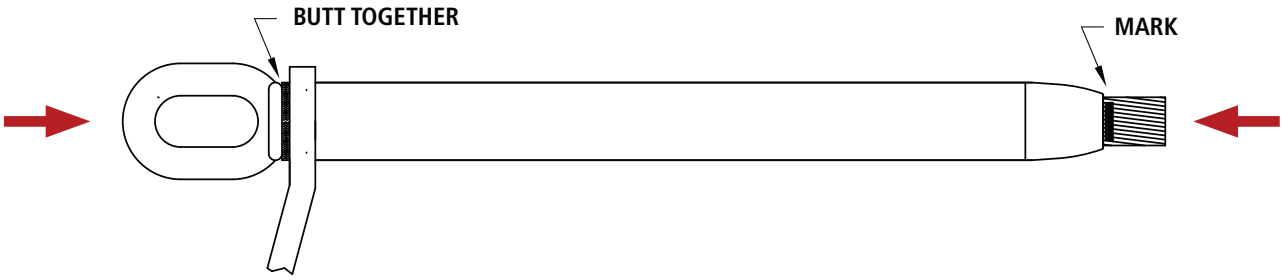


Insert end of conductor into "Core Grip" of Steel Eye. Rotate Eye "back and forth" while pushing Eye onto conductor core.

Remove tape from ends of aluminum strands.

Slide aluminum dead end body over Steel Eye/"Core Grip" until tongue butts solidly against felt washer and shoulder of steel forging.

Push to verify internal parts have remained tight during positioning of aluminum dead end body (See below), then place a mark at the end of barrel.



Align eye or clevis in desired orientation of dead end to ensure proper positioning when dead end is fastened to insulator hardware.

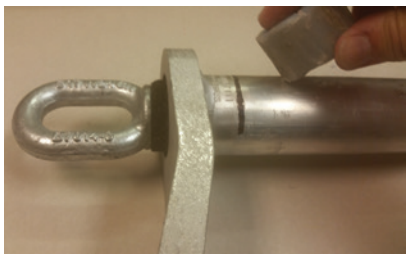
Select die size to compress aluminum dead end body. Die size for aluminum dead end body and die size marked on the die must be the same.

The dead end will bow during compression unless reasonable care is taken to have about 15 ft. (4.5 m) of the conductor supported straight out from the end of the dead end.

NOTE: Filler compound is not required in Dead end due to its void-free internals (See supporting test data available from AFL).

Compressing

Lubricate area to be compressed from "Start" knurl to end of barrel with "Accu-Lube" or similar lubricant, or cover barrel with accessory plastic wrapper.



Verify mark place at end of barrel has remained where originally place. If not, push internals together prior to making first compression (see illustration above).

Make initial compression on the dead end body over the steel shank beginning at the start knurl near the tongue. Continue making compressions overlapping the previous compression by approximately 0.50 inch. Complete die closure is required for each compression. Continue compressing to end of Dead End barrel.

Compressing (cont.)

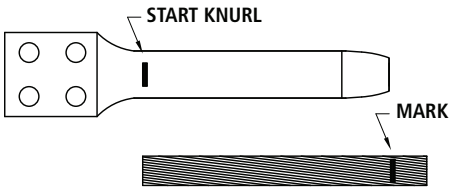
Compressed portion of the dead end should have a smooth uniform appearance. Remove flash, if present with file or emery cloth.

CAUTION: Follow installation instructions carefully. Improper installation can result in mechanical failure of the cable system and possible injury to persons handling or in the vicinity of the cable system.

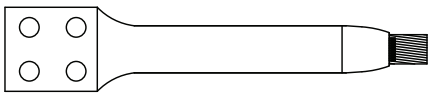
Installation of Terminal Connector

Terminal assemblies consist of Terminal Connector and attachment hardware. The terminal comes prefilled with compound from the factory.

See "Preparation" on page 2 for notes on preparation of conductor.



Mark the conductor from the end, a distance equal to the compression length of the terminal.



Insert conductor into terminal. Be sure the conductors is inserted to the mark on the conductor.

Select die size to compress Terminal Connector. Die size for Terminal Connector and die size marked on the die must be the same.

Compressing

Lubricate area to be compressed from "Start" knurl to end of barrel with "Accu-Lube" or similar lubricant, or cover barrel with accessory plastic wrapper.

Press the Terminal Connector over the conductor. Make the initial compression at the start knurl. Continue making compressions to the end of the Terminal Connector barrel, overlapping the previous compression by approximately 0.50 inches. Complete die closure is required for each compression.

Compressed portion of the Terminal Connector should have a smooth uniform appearance. Remove flash, if present, with file or emery cloth.

Clean contact surface of Terminal Connector and Dead End pad.

Coat surfaces with AFL Alnox Electrical Joint Compound or AFL HiTemp® Universal Compound and then wire brush through compound. Do not remove coating.

Bolt Terminal Connector to Dead End pad. Partially tighten all bolts and then re-tighten each bolt to recommended torque. Aluminum Bolts: (1/2" bolts – 25 lbf-ft (34 N.m); 5/8" bolts – 40 lbf-ft (54 N.m).

CAUTION: Follow Installation Instructions carefully. Improper installation can result in mechanical failure of the cable system and possible injury to persons handling or in the vicinity of the cable system.

Installation Instructions

SOLO HD® Compression System

Adjustable Clevis Dead End

for Use on Overhead Conductor Types

ACSR, ACSS, ACSS/TW

NOTE:

Preparation

Prior to making connections, the conductor and accessory bore must be clean.

NOTE: Improper cleaning of conductor strands can result in higher resistance dead ends; this causes the fittings to operate at higher temperatures leading to premature failure.

Clean conductor strands thoroughly by using one of the methods below:

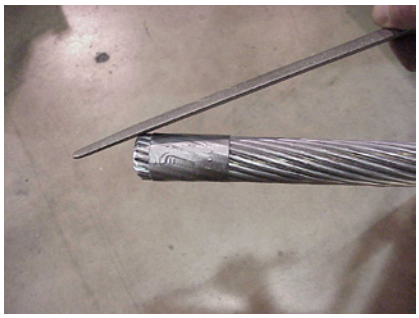
Method 1 – ConductaClean® System (Recommended)
ConductaClean solution cleans ends of overhead conductor prior to assembly and removes oxidation and contaminants from strands.

See information on ConductaClean at AFLglobal.com or call: 800-866-7385 Ref: Transmission tool CCP-SYS_T.

Method 2 – Wire Brush
Clean conductor strands thoroughly with wire brush. Wire brush "new" conductor also.

Check accessory bore for foreign particles, removing if present.

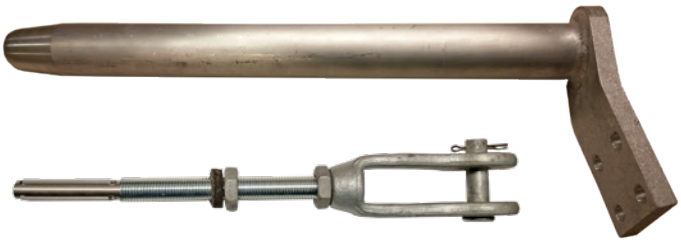
Follow Installation Instructions carefully. Improper installation can result in mechanical failure of the cable system and possible injury to persons handling or in the vicinity of the cable system.



Prior to cutting, wrap tape around the conductor to help maintain the round contour, making it easier to slide the end through the aluminum dead end. File approximately 0.09 inch chamfer on the end of the conductor. (The larger the chamfer, the easier the conductor will slide through).

Straighten several feet of the conductor removing the set caused by the reel.

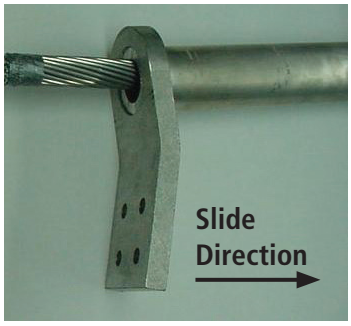
Assembly



Dead end assemblies consist of an aluminum body and steel adjustable clevis/"core grip". (Felt washer is included as part of clevis assembly.)

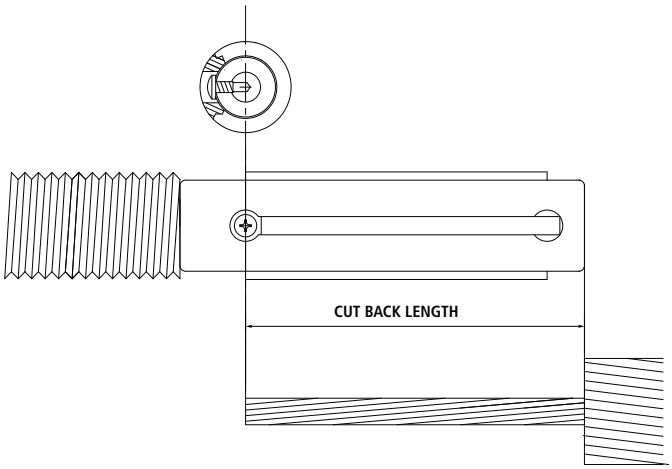
STEEL ADJUSTABLE CLEVIS/"CORE GRIP"

ALUMINUM BODY

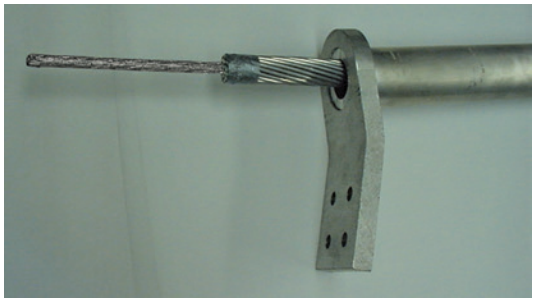


Slide aluminum dead end body (barrel first) over the conductor until sufficient working length protrudes from tongue end.

Cutting Back Aluminum Strands for Installation of Adjustable Clevis/"Core Grip"



NOTE: It is extremely important not to nick the core strands during cutting back of the aluminum strands. If this is done, the ultimate strength of the dead end will be reduced. The cable manufacturer suggests the following method of cutting back the strands.



Suggested Method of Cutting Back Aluminum Strands

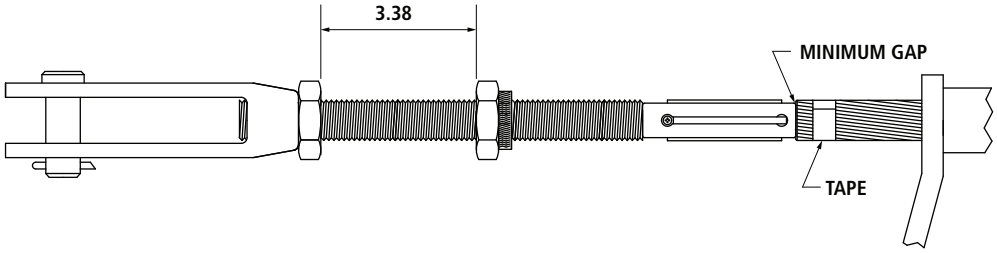
1. Tape location where "cutting back" is needed.
2. Position RIGID cable trimmer around conductor at the tape location.
3. Cut outer aluminum strands by rotating tool until layer becomes loose.
4. Remove cut outer aluminum layer strand.
5. Bend inner layer wires back and forth until they fracture.
6. Remove the broken wires.

Suggested Arrangement of Compressor and Accessory During Field Installation of Dead End

The photo at right illustrates a setup, which works well to ensure a straight compression and easy maneuverability of the compressor. The conductor has been "tied off" to the tower with a sling and chain wench. The compressor is then attached to the sling by a large shackle (The compressor is suspended upside down). The accessory and cable are tied to the sling ensuring all parts are straight and in-line. The compressor can easily be slid along to each successive compression.

File chamfer on end of core and end of aluminum strands to remove burrs and sharp edge. Chamfer will reduce the expanded diameter of the core (due to cutting) and ease the installation of the adjustable clevis/"core grip".

Assembly



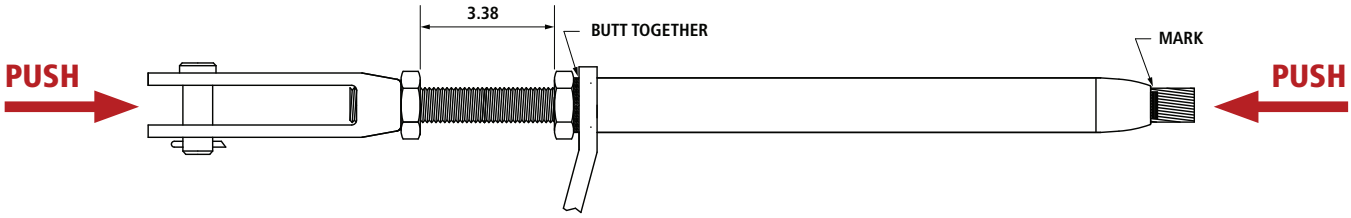
Insert end of conductor into "core grip" of clevis assembly. Rotate clevis assembly "back and forth" while pushing it onto conductor core.

Remove tape from ends of aluminum strands.

Adjust distance between Jam Nuts to 3.38 inches (86 mm) as shown in the illustration above.

Slide aluminum dead end body over adjustable clevis/"core grip" until tongue butts solidly against felt washer and nut.

Push to verify internal parts have remained tight during positioning of aluminum dead end body (See below), then place a mark at the end of barrel.



Align clevis in desired orientation of dead end to ensure proper positioning when dead end is fastened to insulator hardware. Lock in place with adjacent jam nut.

Select die size to compress aluminum dead end body. Die size for aluminum dead end body and die size marked on the die must be the same.

The dead end will bow during compression unless reasonable care is taken to have about 15 ft. (4.5 m) of the conductor supported straight out from the end of the dead end.

NOTE: Filler compound is not required in dead end due to its void-free internals (See supporting test data available from AFL).

Compressing

Lubricate area to be compressed from "Start" knurl to end of barrel with "Accu-Lube" or similar lubricant, or cover barrel with accessory plastic wrapper.

Verify mark place at end of barrel has remained where originally place. If not, push internals together prior to making first compression (see illustration above).

Make initial compression on the dead end body over the steel threads beginning at the start knurl near the tongue. Continue making compressions overlapping the previous compression by approximately 0.50 inch. Complete die closure is required for each compression. Continue compressing to end of dead end barrel.

Compressing (cont.)

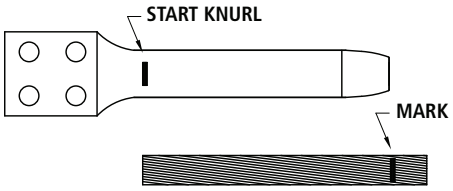
Compressed portion of the dead end should have a smooth uniform appearance. Remove flash, if present with file or emery cloth.

CAUTION: Follow installation instructions carefully. Improper installation can result in mechanical failure of the cable system and possible injury to persons handling or in the vicinity of the cable system.

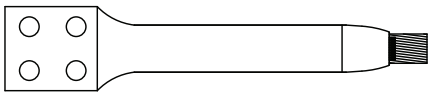
Installation of Terminal Connector

Terminal assemblies consist of Terminal Connector and attachment hardware. The terminal comes prefilled with compound from the factory.

See "Preparation" on page 2 for notes on preparation of conductor.



Mark the conductor from the end, a distance equal to the compression length of the terminal.



Insert conductor into terminal. Be sure the conductors is inserted to the mark on the conductor.

Select die size to compress Terminal Connector. Die size for Terminal Connector and die size marked on the die must be the same.

Compressing

Lubricate area to be compressed from "Start" knurl to end of barrel with "Accu-Lube" or similar lubricant, or cover barrel with accessory plastic wrapper.

Press the Terminal Connector over the conductor. Make the initial compression at the start knurl. Continue making compressions to the end of the Terminal Connector barrel, overlapping the previous compression by approximately 0.50 inches. Complete die closure is required for each compression.

Compressed portion of the Terminal Connector should have a smooth uniform appearance. Remove flash, if present, with file or emery cloth.

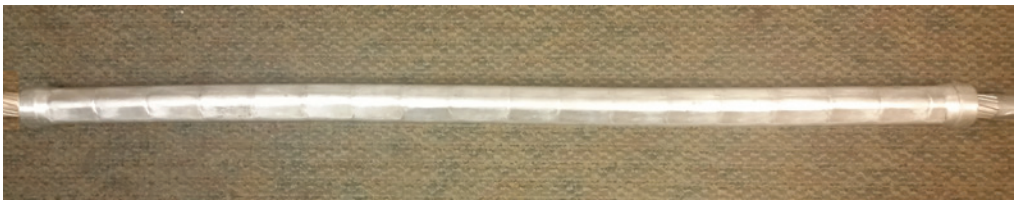
Clean contact surface of Terminal Connector and Dead End pad.

Coat surfaces with AFL Alnox Electrical Joint Compound or AFL HiTemp® Universal Compound and then wire brush through compound. Do not remove coating.

Bolt Terminal Connector to Dead End pad. Partially tighten all bolts and then re-tighten each bolt to recommended torque. Aluminum Bolts: (1/2" bolts – 25 lbf-ft (34 N.m); 5/8" bolts – 40 lbf-ft (54 N.m).

CAUTION: Follow Installation Instructions carefully. Improper installation can result in mechanical failure of the cable system and possible injury to persons handling or in the vicinity of the cable system.

Installation Instructions for AFL Joint for Use on Overhead Conductor Types ACSR, ACSS, ACSS/TW



NOTE:

EXCEPT AS MAY BE OTHERWISE PROVIDED BY CONTRACT, THESE DRAWINGS AND/OR SPECIFICATIONS ARE THE PROPERTY OF AFL, ARE ISSUED IN STRICT CONFIDENCE, AND SHALL NOT BE REPRODUCED OR COPIED OR USED AS THE BASIS FOR MANUFACTURE OR SALE OF PRODUCT WITHOUT PERMISSION.

AFLglobal.com
1 (800) 866-7385

Preparation

Prior to making connections, the conductor and accessory bore must be clean.

NOTE: Improper cleaning of conductor strands can result in higher resistance joints; this causes the fittings to operate at higher temperatures leading to premature failure.

Clean conductor strands thoroughly by using one of the methods below:

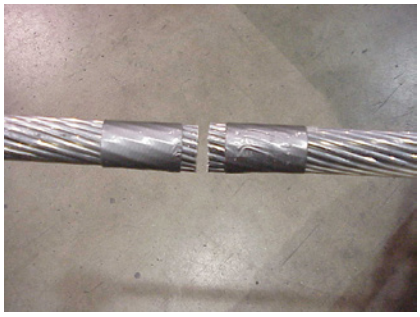
Method 1 – ConductaClean® System (Recommended)
ConductaClean solution cleans ends of overhead conductor prior to assembly and removes oxidation and contaminants from strands.

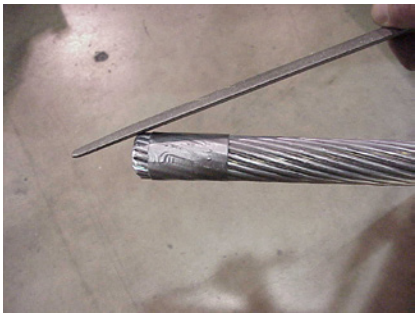
See information on ConductaClean at AFLglobal.com or call: 800-866-7385 Ref: Transmission tool CCP-SYS_T.

Method 2 – Wire Brush
Clean conductor strands thoroughly with wire brush. Wire brush "New" conductor also.

Check accessory bore for foreign particles, removing if present.

Follow Installation Instructions carefully. Improper installation can result in mechanical failure of the cable system and possible injury to persons handling or in the vicinity of the cable system.



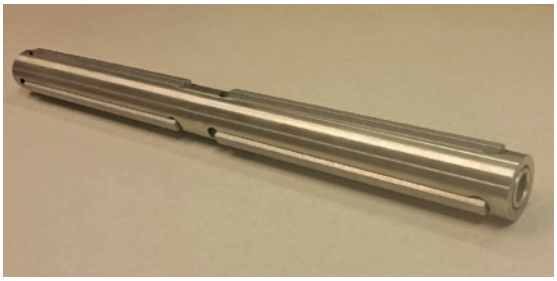


Prior to cutting, wrap tape around the conductor to help maintain the round contour, making it easier to slide the end through the aluminum joint. File approximately 0.09 inch chamfer on the end of the conductor. (The larger the chamfer, the easier the conductor will slide through).

Straighten several feet of the conductor removing the set caused by the reel.

Assembly

Joint consists of an aluminum body and steel sleeve/"core grip" as shown above.



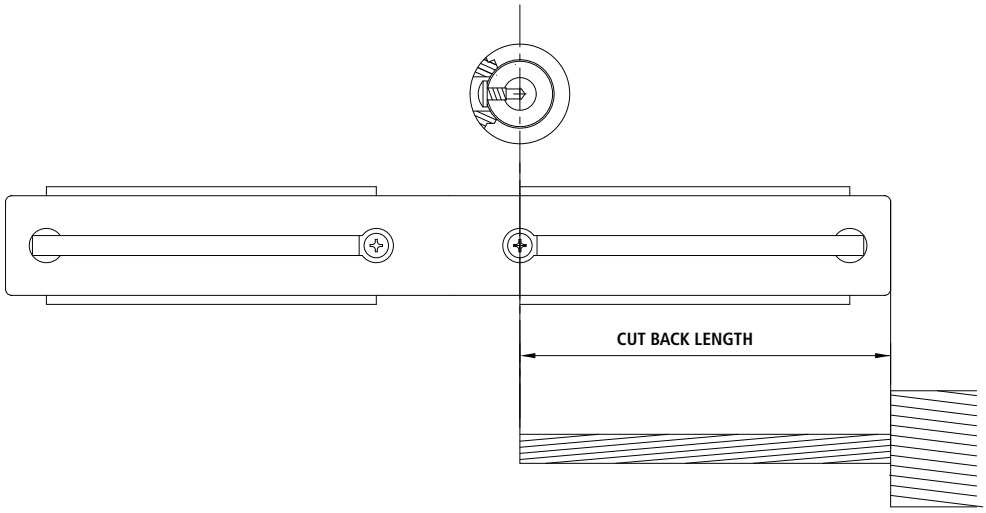
STEEL SLEEVE/"CORE GRIP"

ALUMINUM BODY

Measure back from each conductor and mark at a distance equal to 1/2 the length of the aluminum body.

Slide aluminum body over the conductor and beyond mark until sufficient working length protrudes from barrel end.

Cutting Back Aluminum Strands for Installation of Steel Sleeve/"Core Grip"



NOTE: It is extremely important not to nick the core strands during cutting back of the aluminum strands. If this is done, the ultimate strength of the Joint will be reduced. The cable manufacturer suggests the following method of cutting back the strands.

Suggested Method of Cutting Back Aluminum Strands

1. Tape location where "cutting back" is needed
2. Position RIGID cable trimmer around conductor at the tape location
3. Cut outer aluminum strands by rotating tool until layer becomes loose.
4. Remove cut outer aluminum layer strand
5. Bend inner layer wires back and forth until they fracture
6. Remove the broken wires.

Suggested Arrangement of Compressor and Accessory During Field Installation of Joint

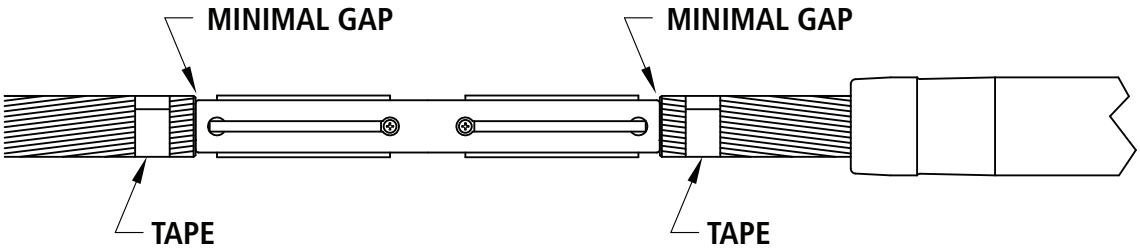
The photos below illustrate setup, which works well to ensure a straight compression and easy maneuverability of the compressor. The photos below show the conductor has been "tied off" (tensioned with slings and chain hoist) to slacken the conductor at point of installation.

Setup 1: The compressor is attached to the sling by a large shackle (the compressor is suspended upside down). The accessory and cable are tied to the sling ensuring all parts are straight and in-line. The compressor can easily be slid along to each successive compression.

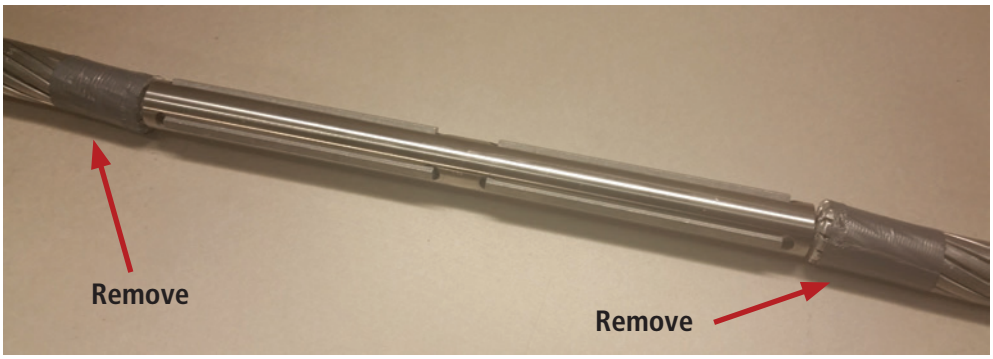
Setup 2: The compressor sits on a board, which sits on the rails of the high lift. The board and compressor can be slid along to each successive compression. The accessory and cable must be supported and all parts must be straight and in-line or bowing will occur.

File chamfer on end of core to remove burrs and sharp edge. Chamfer will reduce the expanded diameter of the core (due to cutting) and ease the installation of the Steel Sleeve/"Core Grip".

Assembly

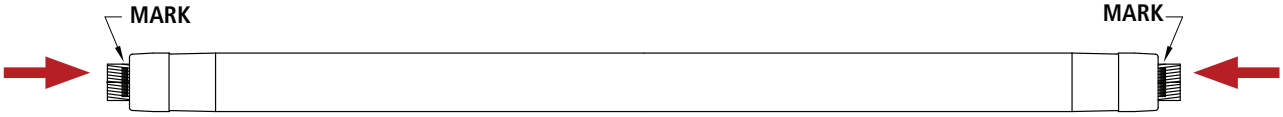


Insert ends of conductor into "Core Grip" ends of steel sleeve. Rotate sleeve "back and forth" while pushing sleeve onto conductor core.



Remove tape from ends of aluminum strands.

Slide aluminum joint body over steel core grip and center within marks.



Push to verify internal parts have remained tight during positioning of aluminum joint body (see above).

Assembly (cont.)

Select die size to compress aluminum joint body. Die size for aluminum joint body and die size marked on the die must be the same.

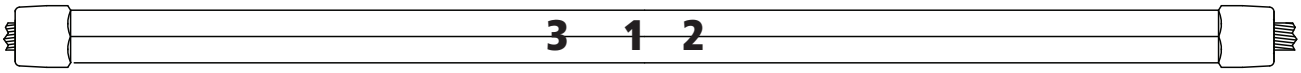
The joint will bow during compression unless reasonable care is taken to have about 15 ft. (4.5 m) of the conductor supported straight out from the end of the joint.

NOTE: Filler compound is not required in the joint due to its void-free internals (see supporting test data available from AFL).

Compressing

Lubricate outside surface of joint with "Accu-Lube" or similar lubricant, or cover barrel with accessory plastic wrapper.

Verify marks placed at end of barrel has remained where originally placed. If not, push internals together prior to making first compression (see illustration on previous page).



Make initial compression over the center portion of the joint (**at 1**).

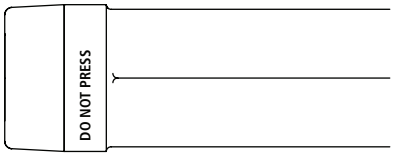
Make the second compression on one end overlapping the initial compression by approximately 0.50 inches (**at 2**) (do not skip bite).

Make the third compression on the opposite end, overlapping the initial compression by 0.50 inches (**at 3**).

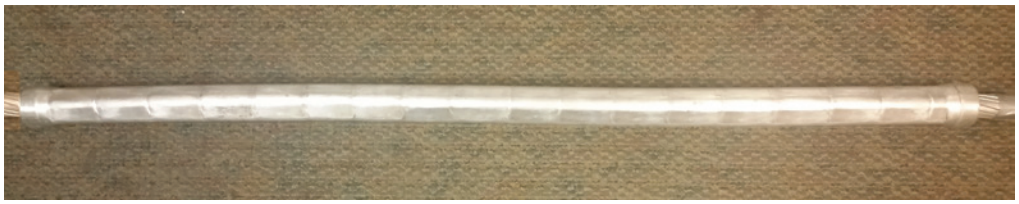
Continue making compressions to the end of the joint overlapping the previous compression by approximately 0.50 inch.

NOTE: Do not compress "End Taper." Complete die closure is required for each compression. Go back and complete the compression on the opposite end.

The "End Tapers" are not compressed (note stamped markings on illustration).



Compressing (cont.)



Compressed portion of the joint should have a smooth uniform appearance. Remove flash, if present with file or emery cloth.

CAUTION: Follow installation instructions carefully. Improper installation can result in mechanical failure of the cable system and possible injury to persons handling or in the vicinity of the cable system.

Installation Instructions

Standard Compression Dead End for ACSR and ACSS Conductor

CAUTION: ACSR Dead Ends Cannot Be Used on ACSS HT Conductor

1. Mark the conductor a distance of 3/4 the length of the aluminum body (***Figure 1***).
2. Prior to making connection, the outer strands of the conductor must be cleaned with a wire brush or abrasive cloth (***Figure 2***).
3. Prior to any strand cutting, tape the end of the conductor to help maintain the round contour.
4. Slide the aluminum dead end body over conductor until sufficient working length protrudes from tongue end. (***Figure 3***).
5. Cut back aluminum strands equal to the depth of the steel forging barrel plus 1 inch (25.4 mm). Do not nick the steel strands. File burrs, if present. (***Figure 4***). Use of a cable trimming tool is recommended. (***Figure 4a, 4b***).
6. Insert steel core into steel barrel to full length of bore. (***Figure 5***).
7. Using the proper SH die set, compress steel barrel full length making initial compression adjacent to rib closest to barrel. Overlap each successive compression by at least ¼ inch (6.4 mm). Complete die closure is required on all compressions.(***Figure 5a, 5b***).
8. Slide the aluminum body over the steel forging until the tongue end butts solidly against felt washer and shoulder of steel eye. Align eye with tongue to desired orientation for attachment to insulator string. (***Figure 6***).

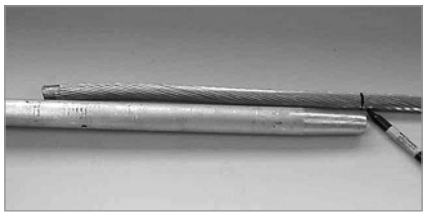


FIGURE 1: Mark the conductor and clean 3/4 the length of the aluminum body.

FIGURE 2: Clean a distance of at least ¾ the distance of the aluminum dead end body.

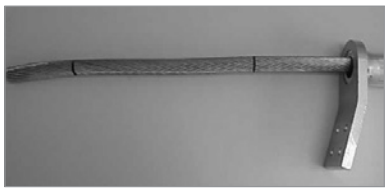

FIGURE 3: Slide aluminum dead end body over conductor.

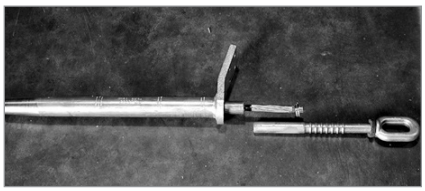

FIGURE 4:

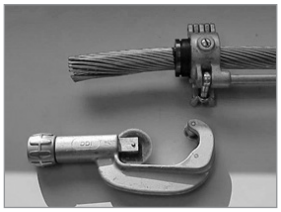

FIGURE 4a:

FIGURE 4b:

FIGURE 5:

FIGURE 5a:

FIGURE 5b:

FIGURE 6:

Installation Instructions (cont.)

Standard Compression Dead End for ACSR and ACSS Conductor

9. Inject filler compound (AFC or AFCHT for HiTemp®) into filler hole until compound emerges at felt washer and tapered end of aluminum body. (***Figure 6a***).

10. Insert and drive filler plug (cavity up) into hole and peen edge of hole over top surface of plug. (***Figure 7***). Leaving the filler plug in the small plastic bag makes it easier to insert when working with gloves. (***Figure 7a***).

11. Using the proper AH die set, make the initial compression on the aluminum body beginning at the "start" mark nearest the tongue. Overlap each successive compression by at least ¼ inch (6.4 mm). Press only to the "stop" mark. Complete die closure is required for each compression. (***Figure 8***).

    Note: A light oil coating on the die grooves and aluminum sleeve is recommended.

12. To press the dead end body over the conductor, use the same die used in step 11. Begin compressing at the "start" mark about centrally located. Overlap each successive compression by at least ¼ inch (6.4 mm). Press to the end of the body, including the tapered portion. Complete die closure is required on each compression. (***Figure 9***).

    During this compression sequence, the plastic bag in which the dead end assembly was received can be used as a medium between the aluminum body and dies (instead of oil as mentioned in step 11).

13. Compressed portion of dead end body should have a smooth uniform appearance. (***Figure 10***). If die flash is present, remove with a file or emery cloth.

14. Remove any excess filler compound which may have been forced out the end of the dead end body.

FIGURE 6a:

FIGURE 10:

Installation Instructions

HiTemp Compression Splice for ACSS and ACSS/TW Conductors

1. Mark the conductor a distance of ½ the length of the aluminum sleeve (***Figure 1***).

2. Prior to making connection, the outer strands of the conductor should be cleaned with a wire brush or abrasive cloth (***Figure 2***).

3. Remark each conductor half the length of the aluminum sleeve, if the mark was removed during wire brushing. Prior to any strand cutting, tape the end of each conductor to help maintain the round contour (***Figure 3***).

4. Slide the aluminum sleeve over one conductor until sufficient working length protrudes from end (***Figure 4***).

5. Cut back aluminum strands of both conductors ½ the length of the steel sleeve plus 1 ½ inch (38.1 mm). Do not nick the steel strands. File any burrs, if present (***Figure 5a***). Use of a cable trimming tool is recommended (***Figure 5b***).

6. Insert ends of steel core into steel sleeve making sure the ends butt solidly against center stop (***Figure 6***).

7. Using the proper SH die set, compress steel sleeve full length making initial compression over center of sleeve (Figure 7a), Overlap each successive compression by at least ¼ inch (6.4 mm) (***Figure 7b***). Complete die closure is required on all compressions.

FIGURE 1: Mark the conductor and clean 1/2 the length of the sleeve.

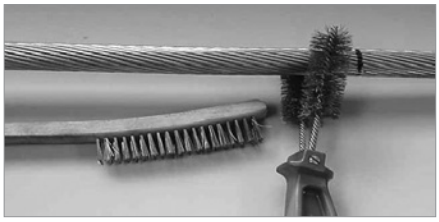

FIGURE 2: Clean the outer strands of the conductor with a wire brush.

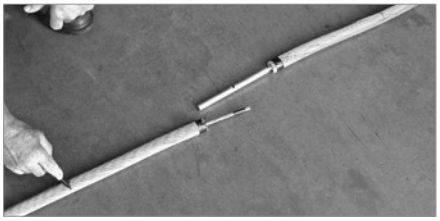

FIGURE 3: Re-mark the conductors after cleaning if needed.

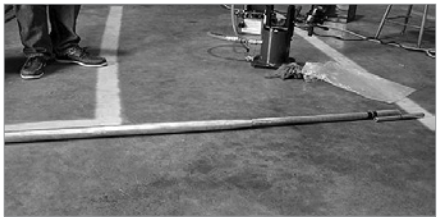

FIGURE 4: Slide sleeve over one conductor so it protrudes out the end.

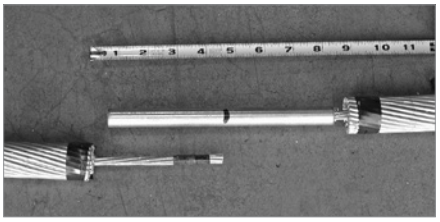

FIGURE 5a: Cut back the Aluminum strands on both conductors 1/2 the length of the Steel sleeve plus 1 1/2 inch (38.1 mm).

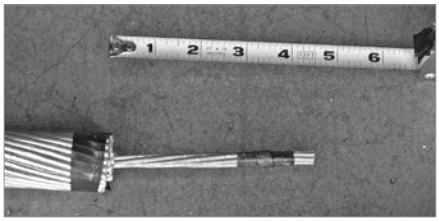

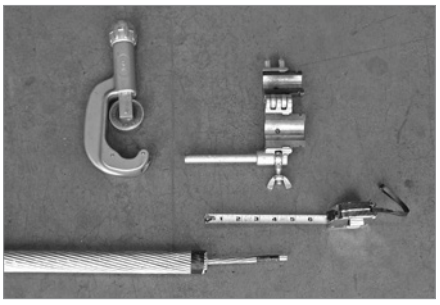

FIGURE 5b: Use of a cable trimming tool is recommended.

FIGURE 6: Slide sleeve over one conductor so it protrudes out the end.

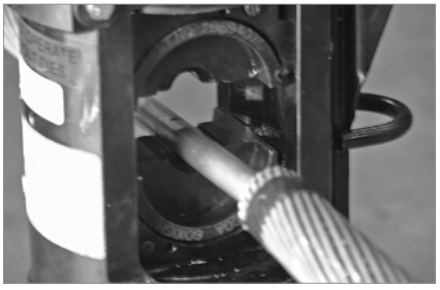

FIGURE 7a: Make the initial compression on center of Steel sleeve.

FIGURE 7b: Overlap each compression on Steel sleeve 1/4 inch (6.4 mm).

1 (800) 866-7385

Installation Instructions (cont.)

HiTemp Compression Splice for ACSS and ACSS/TW Conductors

8. Slide the aluminum sleeve over the installed steel sleeve, centering between the two marks that were made in Step 3 (***Figure 8a & 8b***).

9. Inject AFCHT filler compound into filler hole until compound emerges from both ends of aluminum sleeve (***Figure 9***).

10. Insert and drive filler plug (cavity up) into hole and peen edge of hole over top surface of plug. Leaving the filler plug in the small plastic bag makes it easier to insert when working with gloves (***Figure 10a, 10b and 10c***).

11. Using the proper AH die set, make the initial compression at the "start" mark on one side of center (***Figure 11a***). The second compression should be made at the other "start" mark on opposite side of center. Continue making compressions to the end, overlapping each by at least ¼ inch (6.4 mm) (***Figure 11b***). Repeat this on opposite side of joint (***Figure 11c***). Complete die closure is required for each compression.

Note: A light oil coating on the die grooves and aluminum sleeve is recommended.

12. Compressed portion of splice sleeve should have a smooth uniform appearance. If die flash is present, remove with a file or emery cloth (***Figure 12***). Remove any excess filler compound which may have been forced out the ends of the splice.

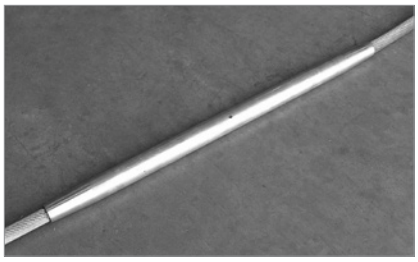

FIGURE 8a: Slide the Aluminum sleeve over the installed Steel sleeve.

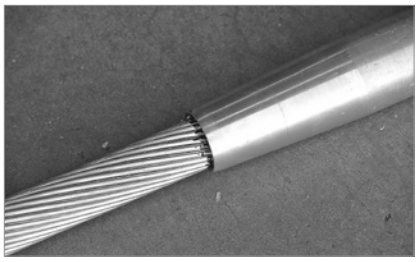

FIGURE 8b: Center the Aluminum sleeve between the marks.

FIGURE 9: Inject AFCHT Filler Compound into the filler hole.

FIGURE 10a: Peen edge of filler hole over top surface of plug.

FIGURE 10b: Filler plug left in plastic bag is easier to insert with gloves.

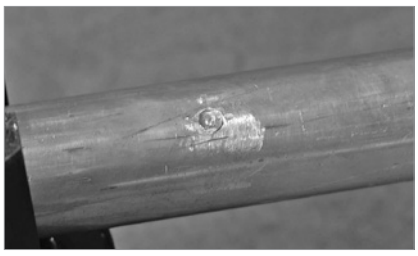

FIGURE 10c: Peen edge of filler hole over top surface of plug.

FIGURE 11a: Make the initial compression at the "start" mark.

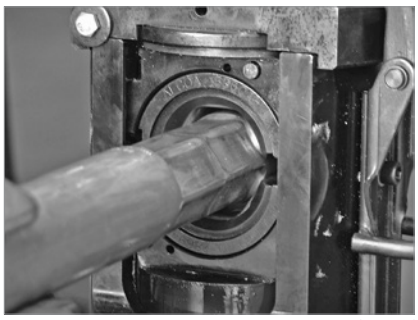

FIGURE 11b: Overlap each compression by 1/4 inch (6.4 mm).

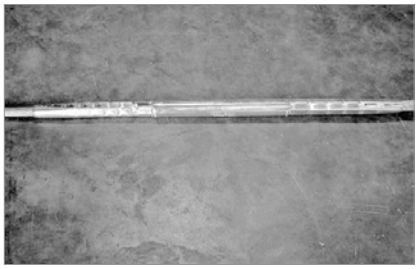

FIGURE 11c: Completed compression splice.

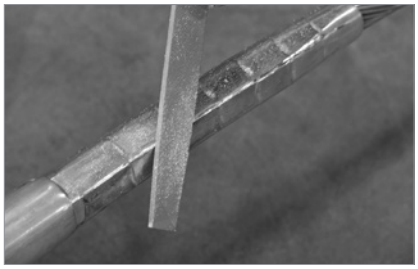

FIGURE 12: If die flash is present, remove with a file or emory cloth.

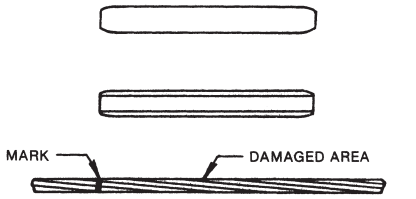
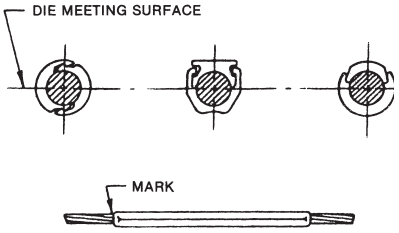
Installation Instructions

HiTemp Repair Sleeves for ACSS and ACSS/TW Conductors

1. Mark the conductor from the damaged area 1/2 the length of the repair sleeve.
2. Compression repair sleeves can be used to restore the electrical and mechanical integrity of a conductor when no more than one-third of the outer aluminum strands are damaged.
3. Select die size for compressing the repair sleeve. The die size on the die and the die size marked on the repair sleeve must be the same.
4. Prior to making connections, the groove of the aluminum accessories and the conductor must be clean. If the conductor is weathered or blackened, clean strands thoroughly with wire brush or abrasive cloth. Check accessory groove for foreign particles, removing if present.
5. Coat the aluminum conductor with HiTemp AFL Filler Compound (AFCHT) over the length to be covered by the repair sleeve.
6. Place the repair sleeve groove on the conductor adjacent to damaged area and slide other half (keeper) in place.



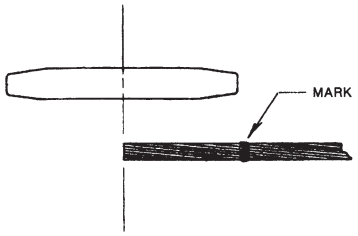
7. Slide repair sleeve assembly over the damaged area, to the mark on the conductor.
8. Make the initial compression over the center portion of the repair sleeve. Make the second compression on one end overlapping the initial compression by 1/4 die bite. Make the third compression on the opposite end, overlapping the initial compression by 1/4 die bite. Continue making compressions to the end of the repair sleeve overlapping the previous compression by 1/4 die bite. Complete die closure is required for each compression. Go back and complete the compression on the opposite encl.
9. The compressed repair sleeve should have a smooth uniform appearance. Remove flash, if present, with file or emery cloth.



Installation Instructions

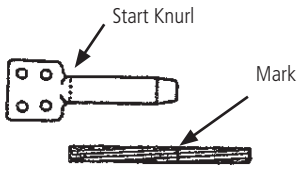
HiTemp Jumper Connectors for ACSS and ACSS/TW Conductors

1. Measure back from each conductor end and mark at a distance equal to 1/2 the length of the aluminum jumper connector.
2. File burrs or sharp edges off the aluminum strands as necessary for ease of insertion.
3. Prior to making connections, the conductor and accessory bores must be clean. If the conductor Is weathered or blackened, carefully unlay aluminum strands for a distance equal to or greater than 1/2 the length of the aluminum jumper connector and clean strands thoroughly with wire brush or abrasive cloth. The outer layer of new conductor should be wire brushed 1/2 the length of the jumper. Check accessory bore for foreign particles, removing if present.
4. Inject HiTemp AFL Filler Compound (AFCHT) into each end of jumper connector and on the conductor to insure that excess compound will be forced from the jumper connector when compressions are completed. Insert the conductor ends into the jumper connector. If the mark on the conductor is not at the end of the jumper connector, and there is resistance to further entry, twist the jumper connector on the conductor. This will work the compound between conductor strands and bleed air from the jumper connector.
5. Select die size for compressing jumper connector. The die size on die and die size marked on aluminum jumper connector must be the same.
6. The jumper connector must be supported a minimum of 15 feet on each side to prevent bowing during compression.
7. Compress jumper connector full length making initial compression over center stop. Overlap each successive compression by approximately 1/4 die bite. Complete die closure is required for each compression.
8. Compressed jumper connector should have a smooth uniform appearance. Remove flash, if present, with file or emery cloth.



Installation Instructions for HiTemp® Compression Terminals

1. Prior to making any connections, the conductor must be clean. For new conductor, the outside diameter shall be wire brushed to remove the aluminum oxidation. If the conductor is weathered or blackened, only the outside diameter can be wire brushed, due to the dead soft aluminum strands of the ACSS or ACSS/TW. Do not try to unlay the strands to clean the inner layers, as the strands will not lay back to its original form. The ConductaClean® ultrasonic cleaning unit is recommended to be used on new and weathered ACSS and ACSS/TW.



2. Mark the conductor from the end, a distance equal to the compression length of the terminal.

HiTemp Compression

3. Inject sufficient AFL HiTemp Filler Compound (AFCHT) or HiTemp® Universal Compound (HiTUC)in the end of the terminal bore and on the conductor to ensure that excess compound will be visible at terminal end when barrel is completely compressed. See chart below for proper amount of AFCHT or HiTUC required for each terminal size.

AFCHT of HiTUC Filler Compound Required

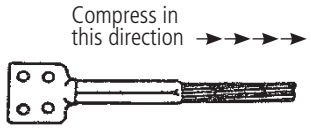
PARTIAL TERMINAL CATALOG NUMBER	LB.	GRAMS (G)
5175.XXXHT, 5675.XXXHT, 5875.XXXHT	0.1	45
5176.XXXHT, 5676.XXXHT, 5876.XXXHT	0.1	45
5120.XXXHT, 5620.XXXHT, 5820.XXXHT	0.1	45
5124.XXXHT, 5624.XXXHT, 5824.XXXHT	0.2	91
5127.XXXHT, 5627.XXXHT, 5827.XXXHT	0.2	91
5130.XXXHT, 5630.XXXHT, 5830.XXXHT	0.3	136
5134.XXXHT, 5634.XXXHT, 5834.XXXHT	0.3	136
5136.XXXHT, 5636.XXXHT, 5836.XXXHT	0.4	181
5138.XXXHT, 5638.XXXHT, 5838.XXXHT	0.4	181
5140.XXXHT, 5640.XXXHT, 5840.XXXHT	0.4	181
5142.XXXHT, 5642.XXXHT, 5842.XXXHT	0.5	227
5144.XXXHT, 5644.XXXHT, 5844.XXXHT	0.5	227
5148.XXXHT, 5648.XXXHT, 5848.XXXHT	0.6	272

CAUTION: Follow installation instructions carefully. Improper installation can result in mechanical failure of the cable system and possible injury to persons handling or in the vicinity of the cable systems.

Installation Instructions for HiTemp® Compression Terminals (cont.)

4. To compress, select the proper die size as stamped on the terminal connector.

5. Compress the terminal, beginning at the "start knurl." Continue compressing toward the end of the terminal. Complete die closure is required for each compression. Overlap the previous compression by approximately 1/4 die bite. It is recommended that die grooves be well lubricated with a lightweight oil. Oil coating should be maintained during entire compression operation. (Other acceptable mediums that can be used instead of oil are wax, soap or plastic bag the terminal shipped in.)



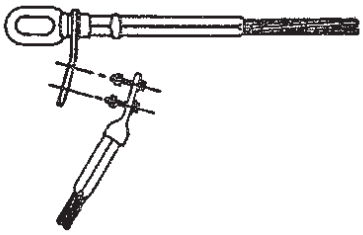
6. Remove flash caused by die closure, if any, with a file.

To Attach Terminal Connector to Dead End or Tee Tap

7. Clean contact surface of pads to be connected by wire brushing thoroughly and immediately coating with a thin film of HiTUC or Alnox. **Do not use AFL Filler Compound (AFC)**.

8. Bolt terminal to dead end pad. Partially tighten all bolts and then re-tighten each bolt to the recommended torque:

   Aluminum 1/2" bolts - 25 lb-ft (34 N.m)
   Stainless Steel 1/2" bolts - 40 lb-ft (54 N.m)

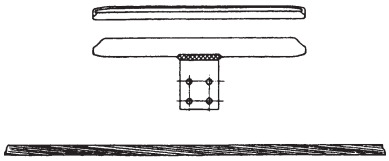


CAUTION: Follow installation instructions carefully. Improper installation can result in mechanical failure of the cable system and possible injury to persons handling or in the vicinity of the cable systems.

Installation Instructions

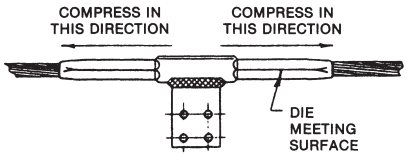
HiTemp Open Run Tee Taps and Tee Connectors for ACSS and ACSS/TW Conductors

1. Remove the keeper.
2. Select die size for compressing the aluminum run. The die size on the die and die size marked on the aluminum run must be the same.
3. Prior to making connections, the groove of the aluminum accessories and the conductor must be clean. The conductor strands should be thoroughly cleaned with wire brush or abrasive cloth. Check the accessory groove for foreign particles, removing if present.
4. Coat the aluminum conductor with HiTemp AFL Filler Compound (AFCHT) over the length to be covered by the tee tap.



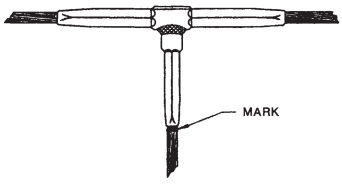
5. Place run groove on conductor and slide the keeper in place.

6. Make initial compression on either side of run starting at the 'start knurl'. Make the second compression on the opposite end of the run at the 'start knurl'. Continue making compressions to the end of the tee overlapping the previous compression by approximately 1/4 die bite. Complete die closure is required for each compression. Go back and complete the compression on the opposite end.
7. Compressed portion of tee should have a smooth uniform appearance. Remove flash, if present, with file or emery cloth.



Installation of "tee" with compression branch

8. Install run tee as before per steps 1-7.
9. Select die size for compressing aluminum branch. The die size on die and the die size on the branch must be the same.
10. Insert conductor full depth into branch bore and mark conductor at end of branch. Remove conductor after marking.
11. Inject sufficient HiTemp AFL Filler Compound (AFCHT) in the end of the branch bore and on the conductor to insure that excess compound will be visible at the branch end when completely compressed.
12. Insert cleaned end of the conductor into the branch to the mark on the conductor.
13. Make initial compression starting at the "start knurl." Continue making compressions to mouth of the branch overlapping the previous compression by approximately 1/4 die bite. Complete die closure is required for each compression.
14. Compressed portion of the branch should have a smooth uniform appearance. Remove flash, if present, with file or emery cloth.

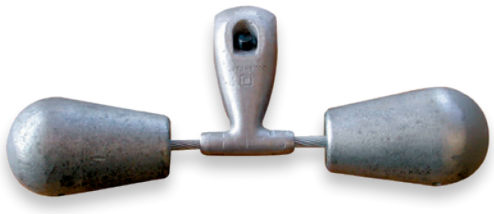


Installation Instructions

Vibration Dampers 1700 Series

GENERAL INFORMATION

AFL vibration dampers are produced with carefully designed and controlled surface finishes for High Voltage use. To maintain this quality, the dampers should be protected, preferably in their shipping containers, from dirt and foreign material prior to installation. Handling in the field should be with care to avoid mechanical damage. AFL Vibration dampers may be installed without disassembly of the clamp parts.



VIBREC® DAMPER RECOMMENDATION PROGRAM

The Vibrec damper recommendation program assists in damper requirements for transmission and distribution lines. For more information contact the AFL Technical Support Team at 1.800.866.7385.

INSTALLATION PROCEDURE

Step 1: (a) Obtain the damper spacing from AFL.
(b) At the tangent tower, the centerline of the damper should be the specified distance from the center of the suspension clamp.
(c) At the dead end location, the centerline of the damper should be the specified distance from the mouth of the dead end. Normally, for a phase conductor, a second damper is required at the dead end location; on a static wire, a second damper is usually not required at the dead end location. The centerline distance between the two dampers should be as specified.

Step 2: Loosen the bolt so that the clamp may be opened sufficiently to permit cable entry into the clamp groove. Note: The bolt need not be removed.

Step 3: Hang the damper on the conductor at the proper spacing specified in Step 1 and tighten the bolt finger tight. For a multi-conductor bundle, the bolt head should be toward the center of the bundle.

Step 4: Tighten the bolt with a torque wrench to the recommended value for the bolt size in the table below. If the bolt has a breakaway outer head, tight the bolt until the breakaway head shears off.

CLAMP ASSEMBLY NUMBER	BOLT DIAMETER Inches	TORQUE lbf. ft (N.m)
2 thru 6	7/16	20 (27)
7 thru 11	1/2	25 (34)
13 thru 20	5/8	40 (54)
21 thru 23	3/4	60 (81)

VIBRATION PROTECTION RECOMMENDATIONS – SPACING NOTES

1. Tangent Spans – Phase Conductor and Overhead Ground Wire (OHGW)
   "Level One Damping" means one damper placement per conductor at one end of the span only. "Two dampers per conductor" means two damper placements (one damper placement at each end of the span).

2. Tangent Spans – Dead End at One End – Phase Conductor
   In spans dead ended at one end only, and requiring only one damper per conductor, the damper should be placed at the tangent structure, spaced in accordance with Dimension A or B. If the span requires three dampers per conductor, then one damper should be placed at the tangent structure, spaced in accordance with Dimension A or B, and two dampers should be placed at the deadended structure, spaced in accordance with Dimensions C and D. Normally, two dampers are recommended at conductor dead ends with insulator strings, as it is impossible to accurately predict the location of vibration node points relative to the conductor dead end. With just one damper at a dead end, the damper could, under certain wind conditions, be at a node point. The effectiveness of two dampers, spaced as recommended, assures that at least one of the two dampers will be effective at all times.

3. Tangent Spans – Dead Ended at One End – Overhead Ground Wire
   In spans deadended at one end only, and requiring only one damper per wire, the damper should be placed at the tangent structure, spaced in accordance with Dimension A or B. If the span requires two dampers per wire, then one damper should be placed at the tangent structure, in accordance with Dimension A or B, and one damper should be placed at the dead end, spaced in accordance with Dimension C.

4. Spans Dead Ended at Both Ends – Phase Conductor
   "Two dampers per conductor" means two dampers at one end of the span only, spaced in accordance with Dimensions C and D. "Four dampers per conductor" means two dampers at each end of the span, spaced in accordance with Dimensions C and D. Normally, two dampers are recommended at conductor dead ends with insulator strings, as it is impossible to accurately predict the location of vibration node points relative to the conductor dead end. With just one damper at a dead end, the damper could, under certain wind conditions, be at a node point. The effectiveness of a damper on a node is significantly reduced. The use of two dampers, spaced as recommended, assures that at least one of the two dampers will be effective at all times.

5. Spans Dead Ended at Both Ends – Overhead Ground Wire
   "One damper per conductor" means one damper at one end of the span, spaced in accordance with Dimension C. "Two dampers per conductor" means one damper located at each end of the span, spaced in accordance with Dimension C.

6. Spans Dead Ended at Both Ends, or Tangent Spans of Dead Ended at One End, For OHGW Utilizing a Formed Guy Grip Dead End
   We do not recommend the installation of damper clamps over formed-guy-grip type dead ends. Therefore, where vibration protection is required for spans using the formed type dead ends, two dampers will be required at each dead end location, with the first damper spaced at the end of the rods and the second damper located in accordance with Dimension D.

7. Dampers Over Armor Rods
   Dampers with the clamps placed over armor rods are not as effective as dampers with the clamp placed directly on the conductor. Therefore, if armor rods are used, the rods should be short enough as to permit installation of the damper clamp over the bare conductor, using the recommended Dimension B spacing. The Dimension B is used whenever armor rods, line guards or AGS units are specified. In the event the rod lengths are too long to permit installation directly on the conductor, the damper clamp must be selected to fit over the installed rods.

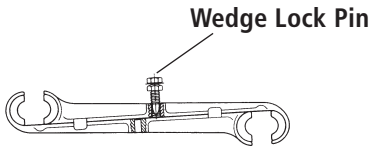
8. Selective Damping
   The ability of a damper to protect a given span may be hindered by vibration in adjacent undamped spans even though the vibration in the undamped spans is not at a damaging level for the undamped span. Therefore, damping of adjacent spans is suggested at times. For simplicity, the Vibrec™ program recommends that spans adjacent to a span requiring dampers also be damped. AFL will, however, approve omission of dampers in spans shorter than the level zero limit when the adjacent damped spans are less than 50% of the one-damper limit.

9. If there are any questions with respect to the damper recommendations or placement, contact your local representative.

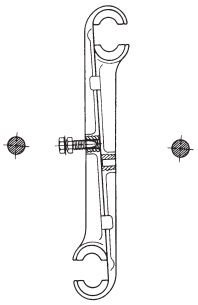
Installation Instructions

Speed-Grip® Spacers

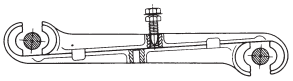
1. Prior to installation, slide open the spacer assembly giving a clamp opening of approximately 1½ times the conductor diameter. Finger-tighten the wedge-lock pin enough to hold the spacer assembly in the open position.



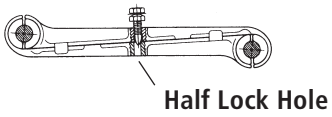
2. Position spacer assembly between the two conductors, so that it is perpendicular to the conductors.



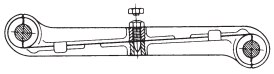
3. Rotate the spacer assembly until the conductors rest in the open clamps.



4. Loosen the wedge-lock pin and slide the spacer assembly closed. Finger-tighten the wedge-lock pin to engage the pin with lower spacer half lock hole.



5. Using a 12" (30 cm) ratchet wrench with a 6-point deep socket, tighten the wedge-lock pin until breakaway head shears off.



6. Make final visual inspection to ensure that the spacer is properly seated on the conductor, shear head is missing and the wedge-lock pin head is free of burrs.

Transmission Conductor Vibration Dampers
Dissipator High-Efficiency Stockbridge Damper — 1700AA Series

New Bell-shaped Weight Design

AFL's new Dissipator high-efficiency stockbridge damper 1700AA series provides a significant performance improvement over our traditional damper due to its unique offset bell-shaped weight configuration. The new offset weight design basically doubles the number of resonant frequencies, thereby providing a more consistent efficiency performance over the aeolian frequency span. AFL combined the proven performance of our unique bell-shaped weights and incorporated them in a design using two different size weights on unequal messenger lengths. The end result produced a damper with optimum performance that will eliminate damage caused by aeolian vibration thereby extending the life of a transmission line.

Applicable Conductor Types:
ACSR, ACSR-TW, ACSS (HiTemp), ACSS-TW, AAC, AAAC, ACAR

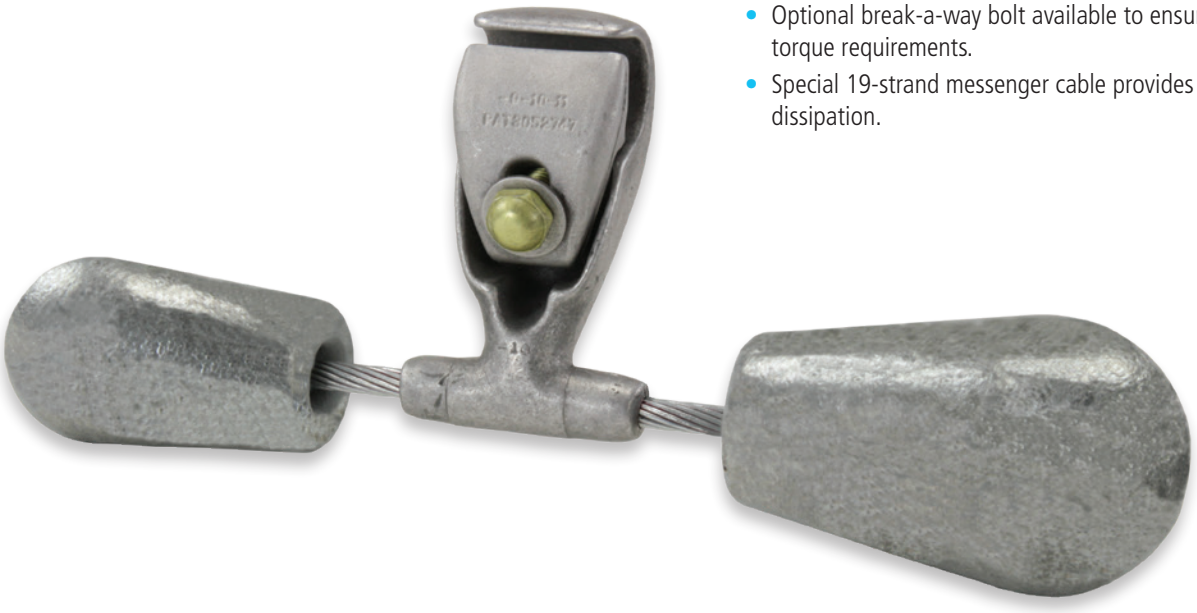
Note:
Please contact AFL for use.

Vibrec® Damper Placement Software

AFL has the longest standing history in vibration analysis today. From the many years of testing and gathering of empirical data, AFL introduced Vibrec, an integrated Windows®-based vibration analysis program that is available as a "Free Download" on our website. This program allows users to perform analysis on transmission lines by inputting various mechanical and environmental parameters that can affect vibration. With this information, Vibrec determines how many AFL Stockbridge vibration dampers or Speed-Grip® Spacers will be required for each span and suggests the best location for these accessories. You can also contact our technical support team for a free analysis.

Features

- Four natural frequency response modes and the unique weight shape provide one of the widest frequency ranges of coverage in the industry.
- Damper's unique bell shaped weight with smooth contours throughout the entire damper design provides corona performance up to 500 kV.
- Unique conductor clamp design can be used on HiTemp® conductor applications up to 250°C without the need for armor rods.
- Optional break-a-way bolt available to ensure consistent torque requirements.
- Special 19-strand messenger cable provides highly efficient energy dissipation.



Transmission Conductor Vibration Dampers Dissipator High-Efficiency Stockbridge Damper — 1700AA Series (cont.)

The AFL Stockbridge Damper is the most efficient way to extend the life of a transmission line. It is designed to eliminate the damage caused by aeolian vibration.

What is Aeolian Vibration?

Aeolian vibration is a high frequency motion that can occur when a smooth, steady crosswind blows on aerial cables. This laminar wind creates vortices, which are detached at regular intervals on the leeward side, alternating from top and bottom of the cable. The detachments create vertical forces causing the cable to vibrate in standing waves. The primary factors effecting aeolian vibration are span length, tension and environmental factors. The amount of energy imparted to a cable varies directly with the span length. With increasing tension, the tendency of a cable to vibrate rises as its self dampening ability reduces.

The first aeolian vibration fatigue failures of stranded conductor were reported in 1917. George Stockbridge of Southern California Edison patented the stockbridge damper in 1928. During this same timeframe, an outdoor test span and indoor laboratory was erected for the study of vibration. These expanded facilities, along with more than 70 years of research and experience, have assisted AFL in understanding the theory of vibration and its control. Aeolian vibration still occurs and causes damage to conductors, hardware and towers. AFL Stockbridge Dampers dissipate this damaging force of nature.

Dampers for T2 Conductors

AFL has developed a special clamp insert that allows the damper to be firmly secured to a T2 conductor. See page 394 for an illustration of the damper and the attachment. Please contact our engineering department for applications involving T2 Conductor.

Vibration Recommendation Form can be found on page 404.

Vibration Dampers for Aluminum Type Conductor (ACSR, ACSR-TW, ACSS, ACSS-TW, AAC, AAAC, ACAR)

-19[3]	2.376 - 2.614	60.4 - 66.4	5/8	2.4	1.09

Notes:

1. Steel weight shown in Table 1 includes both damper weights and other steel parts used. For complete weight of damper assembly, add partial weights shown in Tables 1 and 2.
2. Regular aluminum hexagon head bolts are standard on assemblies that have 1705 weights and smaller. Assemblies having 1706AA weights and larger have special Corona hexagon head bolts.
3. For conductor sizes not covered in the table, consult AFL Technical Support Team at 1.800.866.7385.
4. Installation instructions for dampers start on page 393.
5. Weight combination sizes for cables smaller than 0.971" (1700 series) have identical weights on both sides.
6. Weight size 1701 uses a 7-strand messenger cable.

Ordering Instructions

Step 1: Determine Conductor Diameter

All damper ordering is based on the diameter of the conductor being used.

Step 2: Select Weight Catalog Number

Use Table 1 to select the correct weight catalog number based on the diameter of the bare conductor being used.

Step 3: Select Clamp Catalog Number

Before selecting a Clamp, ask one question 'Does this application require placement of clamp over armor rods?'

If yes, select the correct clamp catalog number from Table 2 based on the total diameter of the conductor and the armor rods.

If no, select the correct clamp catalog number from Table 2 based on the diameter of the bare conductor being used.

Step 4: Select Bolts

For breakaway bolts, use 'BA'. For standard bolts, leave blank.
NOTE: Breakaway bolts may not be corona free at voltages 345kV and above.

Step 5: Create Catalog Number

Weight Catalog Number + **Clamp Catalog Number** + **Bolts**

Example:
Without Armor Rods
Conductor Diameter: 1.108" (28.1 mm)
Weight Size from Table 1: 1706AA
Clamp Size from Table 2: -10
Bolts: Breakaway
Catalog Number: 1706AA-10BA

With Armor Rods
Conductor Diameter: 1.108" (28.1 mm)
Weight Size from Table 1: 1706AA
Diameter of Conductor and Armor Rods: 1.728" (43.9 mm)
Clamp Size from table 2: -15
Bolts: Standard
Catalog Number: 1706AA-15

Vibration Dampers for Galvanized Steel or Alumoweld® Strand

Table 1: Weight Selection

WEIGHT CATALOG NUMBER	BARE CONDUCTOR DIAMETER RANGE		WEIGHT [2] STEEL	
	in.	mm	lbs	kg
GALVANIZED STEEL, ALUMOWELD®				
1701 [1]	0.270 - 0.430	6.9 - 10.9	2.6	1.18
1702 [1]	0.431 - 0.630	11.0 - 16.0	5.5	2.49

Table 2: Clamp Selection

CLAMP AFL NO.	OVERALL DIAMETER RANGE AT POINT OF INSTALLATION		CLAMP BOLT DIA. [4]	WEIGHT [2] ALUMINUM	
	in.	mm		lbs	kg
-2	0.270 - 0.360	6.9 - 9.1	7/16	0.3	0.15
-3	0.361 - 0.460	9.2 - 11.6	7/16	0.3	0.15
-4	0.461 - 0.570	11.7 - 14.4	7/16	0.3	0.15
-5	0.571 - 0.675	14.5 - 17.1	7/16	0.4	0.16
-6	0.676 - 0.770	17.2 - 19.8	7/16	0.4	0.15
-7	0.771 - 0.870	19.6 - 22.1	1/2	0.6	0.26
-8	0.871 - 0.970	22.2 - 24.6	1/2	0.6	0.26

Notes:

1. Steel weight shown in Table 1 includes both damper weights and other steel parts used. For complete weight of damper assembly, add partial weights shown in Tables 1 and 2.
2. For conductor sizes not covered in the table, consult AFL Technical Support Team at 1.800.866.7385.
2. Installation instructions for dampers start on page 393.

Ordering Instructions

Step 1: Determine Conductor Diameter

All damper ordering is based on the diameter of the conductor being used.

Step 2: Select Weight Catalog Number

Use Table 1 to select the correct weight catalog number based on the diameter of the bare conductor being used.

Step 3: Select Clamp Catalog Number

Before selecting a Clamp, ask one question 'Does this application require placement of clamp over armor rods?'

If yes, select the correct clamp catalog number from Table 2 based on the total diameter of the conductor and the armor rods.

If no, select the correct clamp catalog number from Table 2 based on the diameter of the bare conductor being used.

Step 4: Select Bolts

For breakaway bolts, use 'BA'. For standard bolts, leave blank.

Step 5: Create Catalog Number

Guy Wire Vibration Dampers Stockbridge Type—2200 Series

The 2200 series guy wire dampers have been designed to dampen the wind-induced motion of guy wires. They were originally developed for the guy wires on United States Military navigation towers.

Aeolian vibration is a high frequency motion that can occur when a smooth, steady crosswind blows on aerial cables. Aeolian vibration can cause loosening of bolted connections and wear at the guy wire joints. With the proper placement of AFL guy wire dampers, aeolian vibration damage can be eliminated.

Features

Engineered Performance

The guy wire damper features a specially designed hinged clamp with Belleville washers which provides maximum clamping area over the guy wire while maintaining a sufficient clamping force. The combination of these two features keeps the damper from "walking down" the wire.

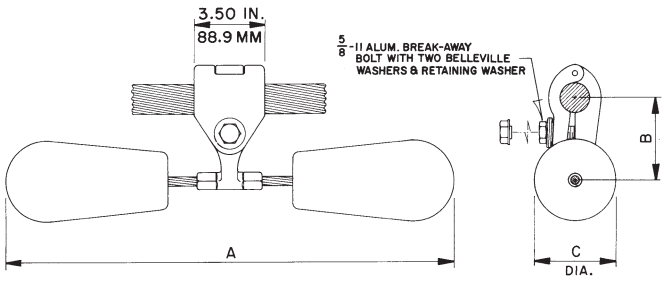
No Special Tools Needed with Breakaway Bolt Option

With the breakaway bolt, no special tools or torque wrench is needed. Simply tighten the bolt until the head shears off. This means proper torque has been achieved.

Damper Recommendations

For specific application requirements, contact the AFL Technical Support Team at 1.800.866.7385.

Guy Wire Vibration Dampers
Stockbridge Type—2200 Series (cont.)



Ordering Instructions

Determine Conductor Diameter

Select guy wire damper catalog number based on the diameter of the conductor being used.

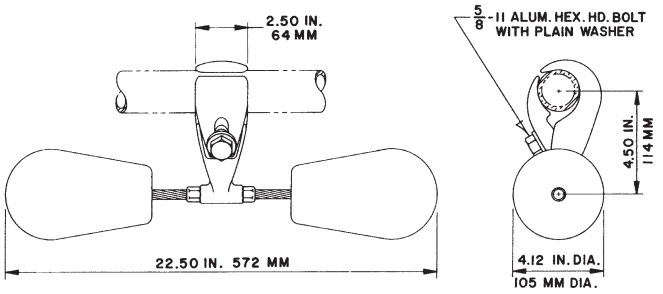
Note:
All guy wire dampers come standard with breakaway bolts.

Highway Truss Vibration Dampers



AFL Highway Truss Dampers offer the most practical and economical solution for vibration problems normally encountered in highway sign trusses. The AFL 1708-17.1 damper, weighing 31 lbs. (14.06 kg), is the size most commonly used for highway truss applications. A single damper located at the mid-point of the truss will provide vibration protection for lengths between 60 and 140 ft (18.3-42.7 m). Special consideration should be given to longer spans or cantilever applications.

Ordering Information

AFL NO.	TUBE O.D.		TOTAL WEIGHT			
	in.	mm	ALUM.		TOTAL	
			lbs.	kg	lbs.	kg
1708-17.1	2.00	50.8	2.2	1.00	31.0	14.06

Notes:

1. Truss damper comes standard with breakaway bolt.
2. The 1708-17.1 damper also fits 1-1/2" SPS tube.
3. For truss sizes not listed and recommended placement, contact the AFL Technical Support Team at 1.800.866.7385.

Spacer Dampers with Elastomer Bushed Clamps—280000 Series

Spacer dampers were originally developed to suppress bundle conductor subspan oscillations that could cause damage to multi-conductor bundle systems. Later, it was determined that they could be used to control aeolian vibration as well as wake-induced oscillation. The spacer damper is designed to maintain the original geometry of the bundle system against loads. It must also restore the bundle to normal posture after experiencing severe loads due to short-circuit currents, ice and wind.

The AFL Spacer Damper combines the function of a spacer in maintaining conductor separation and the function of a damper in controlling aeolian vibration. The viscoelastic bushings firmly grip the conductor. AFL has developed spacer damper designs to meet various bundle configurations and installation requirements.

Features

Controls Oscillation and Aeolian Vibration

The Spacer Damper is the most efficient way to extend the life span of the transmission line. It is designed to dissipate the damaging vibrations caused by wind.

No Special Tools Needed with Breakaway Bolt Option

With the breakaway bolt, no special tools nor torque wrench are needed. Simply tighten the bolt until the head shears off, indicating proper torque has been achieved.

Customized Designs

AFL can engineer a line protection system for any particular project. The Spacer Dampers are available for 3 and 4 conductor bundles. Standard spacing is 18 inches. For alternate spacing and bundle design, contact AFL Technical Support Team.

Vibrec® Damper Recommendation Program

The Vibrec damper recommendation program assists in spacer damper requirements for transmission lines. For more information visit www.Vibrec.com or contact the AFL Technical Support Team at 1.800.866.7385.

Vibration Recommendation Form can be found on page 403.

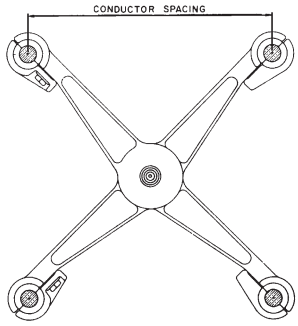
3 Conductor Bundle
Bolted Type Clamp



4 Conductor Bundle
Bolted Type Clamp

Ordering Instructions

Step 1: Select Bundle and Clamp Type Catalog Number

Determine conductor bundle and clamp type to get first part of catalog number from Table 1.

Step 2: Select Clamp Size Catalog Number

Determine clamp size by diameter of conductor to get second part of catalog number from Table 2. For conductor diameter, see pages 387-392.

Step 3: Create Catalog Number

Clamp Type Number + **Clamp Size Number**

Example:

For a Spacer Damper with bolted clamps for 3 Conductor Bundle of 795 Drake ACSR conductor, the complete Catalog Number is:

283457.287

Table 1: Bundle & Clamp Type Selection

Spacer Dampers Frame Style with Elastomer Bushed Clamps

Spacer dampers were originally developed to suppress bundle conductor subspan oscillations that could cause damage to multi-conductor bundle systems. Later, it was determined that they could be used to control aeolian vibration as well as wake-induced oscillation. The spacer damper is designed to maintain the original geometry of the bundle system against loads. It must also restore the bundle to normal posture after experiencing severe loads due to short-circuit currents, ice and wind.

The AFL Spacer Damper combines the function of a spacer in maintaining conductor separation and the function of a damper in controlling aeolian vibration. The viscoelastic bushings firmly grip the conductor. AFL has developed spacer damper designs to meet various bundle configurations and installation requirements.

Features

High Temperature Application

The HiTemp® Speed-Grip® Spacer is specifically designed with elastomer bushed clamps that can withstand the rigors of increased temperatures (up to 250°C) of ACSS and ACSS/TW conductors. Two HiTemp bushings are available for 200°C and 250°C operation.

Controls Oscillation and Aeolian Vibration

The Spacer Damper is the most efficient way to extend the life span of the transmission line. It is designed to dissipate the damaging vibrations caused by wind.

No Special Tools Needed with Breakaway Bolt Option

With the breakaway bolt, no special tools or torque wrench is needed. Simply tighten the bolt until the head shears off, indicating proper torque has been achieved.

Customized Designs

AFL can engineer a line protection system for any particular project. The Spacer Dampers are available for 3 and 4 conductor bundles. Standard spacing is 18 inches. For alternate spacing and bundle design, contact AFL Technical Support Team.

Conductor Clamps

Clamps are constructed of high strength aluminum alloy with a hinged bolted rubber grommet configuration as the standard. Aluminum shear-head bolts are used to assure consistent torque is achieved during installation. A locking pin style is available on some sizes which requires a special tool for installation.

Corona and RIV

Spacer Dampers are designed to provide corona free performance on operating voltages up and including 500 kV. Special designs are available for 765 kV applications.

Vibrec® Damper Recommendation Program

The Vibrec damper recommendation program assists in spacer damper requirements for transmission lines. For more information visit www.Vibrec.com or contact the AFL Technical Support Team at 1.800.866.7385.

Vibration Recommendation Form can be found on page 403.

Order AFL No. SDL-INS-TOOL

Ordering Instructions

Step 1: Select Clamp Type from above options.
Step 2: If high temperature bushings are required for rating up to 250°C conductor operation, add "HT." Otherwise, leave blank.
Step 3: Select number of sub-conductors in bundle. Bundle options are shown in Table 1 on the following page.
Step 4: Select Range Code. Range codes are shown in the tabulated catalog numbers in Table 2 on the following page.
Step 5: Select the conductor bundle spacing. Options are shown in Table 1 on the following page.

Example:
For a 3-conductor bundle spacer damper for use with ACSS Drake (diameter 1.108"), rated for use at 250°C conductor operation, with 18" conductor spacing and bolted bushed clamps, the catalog number would be **SDBBHT3-2829-18**.

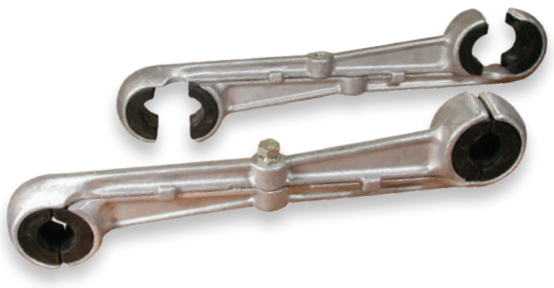
*** Notes:**

1. The catalog numbers shown in Table 2 are applicable to equal subconductor spacings and 2-conductor spacer dampers. For unequal subconductor spacings, please contact AFL for ordering information.
2. For high temperature applications up to 250°C, add "HT" to the clamp portion of the catalog number. Example: SDBBHT2-2021-18.

Speed-Grip® Spacers for Two Bundle Conductors—3300 Series



Spacers are necessary on horizontal bundle construction to prevent damage from wake-induced oscillation, ice unloading and short circuit clashing. AFL's Speed-Grip Spacer employs elastomer bushed clamps to firmly grip the conductor. It is specially designed to allow rapid installation without special tools.

What is wake-induced oscillation?

Wake-induced oscillation is a motion particular to bundled conductors experiencing moderate to high crosswinds. It takes various forms based on the bundle configuration and winds that occur. Damage can result due to conductor clashing or wear of attachment hardware, and thus it is important to protect against it. AFL has been researching oscillation to understand it and has developed improved accessories to control it.

Features

Fully Assembled

The Speed-Grip Spacer is ready for immediate installation. The bushings are seated, frames interlocked and the wedge-lock bolt in place.

Quick Installation

With no loose parts, whether from a helicopter, spacer cart or bucket, the Speed-Grip spacer takes seconds to install.

No Special Tools

With the wedge-lock breakaway bolt, no special tool or torque wrench is needed. Simply tighten the bolt until the head shears off, indicating proper torque has been achieved.

Customized Design

The Speed-Grip Spacer is designed with a standard 18 inch spacing. For applications requiring other spacing dimensions, contact the AFL Technical Support Team.

Spacers for T2 Conductors

AFL has developed a special clamp insert that allows the speed grip spacer to be firmly secured to a T2 conductor. See page 394 for an illustration of the spacer and the attachment. Please contact our engineering department for applications involving T2 Conductor.

High Temperature Applications

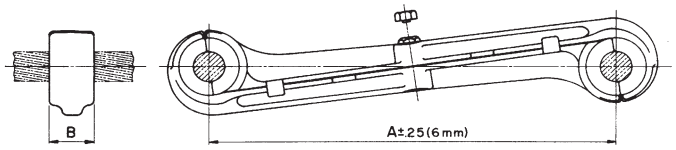
The Standard Bushings have a maximum temperature of 125°C. AFL has designed a special clamp insert to withstand the elevated temperatures of high temperature conductors. Two units are currently available for 200°C and 250°C. The 200°C unit is designated by adding the suffix "MT" to the part number. (i.e. 3326MT). The 250°C unit is designated by adding "HT" to the part number. (i.e. 3326HT). See page 337 for information on the HiTemp® Speed-Grip Spacers—3300HT Series. Please contact our engineering department for performance data on these two units.

Vibrec® Damper Recommendation Program

The Vibrec damper recommendation program assists in Speed-Grip Spacer requirements for transmission lines. For more information visit www.Vibrec.com or contact the AFL Technical Support Team at 1.800.866.7385.

Vibration Recommendation Form can be found on page 404.

Speed-Grip® Spacers for Two Bundle Conductors—3300 Series (cont.)



The Speed-Grip Spacer comes fully assembled with no loose parts. The wedge lock break-away bolt requires no special tools to tighten. Unless otherwise requested, standard spacing is 18 inches.

Ordering Information

Speed-Grip Spacers are ordered by catalog number corresponding to the conductor diameter.

Example:

For 795 Drake ACSS Conductor (1.108" diameter) operating at 250°C, the Speed-Grip Spacer catalog number would be:

3310 HT

Range Code
BLANK = Standard (125°C max.)
MT = Medium Temperature (200°C max.)
HT = High Temperature (250°C max.)

Note:
Installation instructions for Speed-Grip Spacers are on page 402.

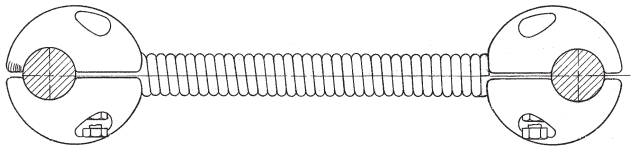
Spring-Type Conductor Spacers for Two Bundle Conductors—1790 and 1800 Series



Ordering Instructions

Step 1: Select Base Catalog Number

Select catalog number based on the diameter of the conductor being used.

Step 2: Determine the Desired Spacing

Determine the desired spacing in whole inches and place after base catalog number. Standard spacing is 18 inches.

Step 3: Select the Type of Spring

Select "G" for a galvanized spring and "S" for a stainless steel spring. Place the spring letter at the end of the catalog number.

Step 4: Create Catalog Number

Base Catalog Number + **Desired Spacing** + **Spring Type**

Example:

Conductor Diameter: 1.108" (28.1mm)
Base Catalog Number: 1794
Spacing: 18 inches
Spring Type: G
Complete Catalog Number: 1794.18G

1790 Series
Recommended for Voltages up to 345 kV

Notes:
1. Installation instructions for Spring-Type Spacers are on page 402.
2. Weights are based on spacing of 18 inches.

Installation Instructions

1700-T2 SERIES VIBRATION DAMPER

General

AFL vibration dampers are produced with carefully designed and controlled surface finishes for High Voltage use. To maintain this quality, the dampers should be protected, preferably in their shipping containers, from dirt and foreign material prior to installation. Handling in the field should be with care to avoid mechanical damage. AFL Vibration dampers may be installed without disassembly of the clamp parts.

NOTE: DO NOT WRAP TAPE OVER THE INSERTS TO HOLD THEM TO THE CONDUCTORS, THIS WILL REDUCE THE DAMPERS SLIP STRENGTH AT THE CLAMP/INSERT INTERFACE

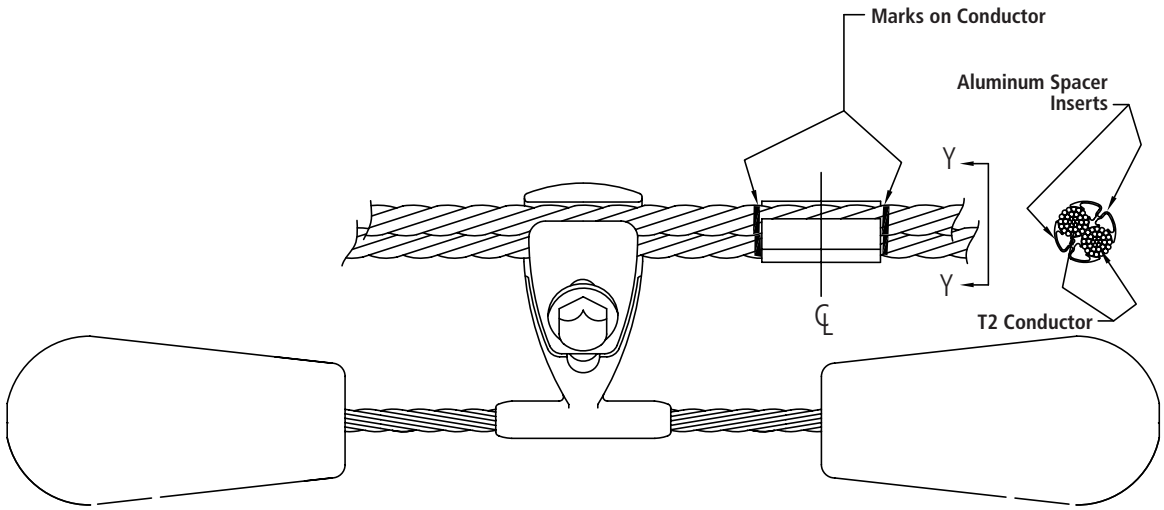
Procedure

Step 1 Obtain the damper placement location from AFL Damper Recommendation Form.

Step 2 Loosen the bolt to open clamp sufficiently to permit cable entry into the clamp groove. Note: The bolt need not be removed.

Step 3 Hang the damper around the conductor near the final installation location. For a horizontal two-conductor bundle, the bolt head should be toward the center of the bundle.

Step 4 Hold the two spacer inserts at the proper spacing as specified in Step 1 and mark the conductor on each side as illustrated.



NOTE: 1700-T2 Dampers are only for use on overhead transmission line twisted pair cables.

CAUTION: ***Follow installation instructions carefully. Improper installation can result in mechanical failure of the cable system and possible injury to persons handling or in the vicinity of the cable systems.***

Installation Instructions

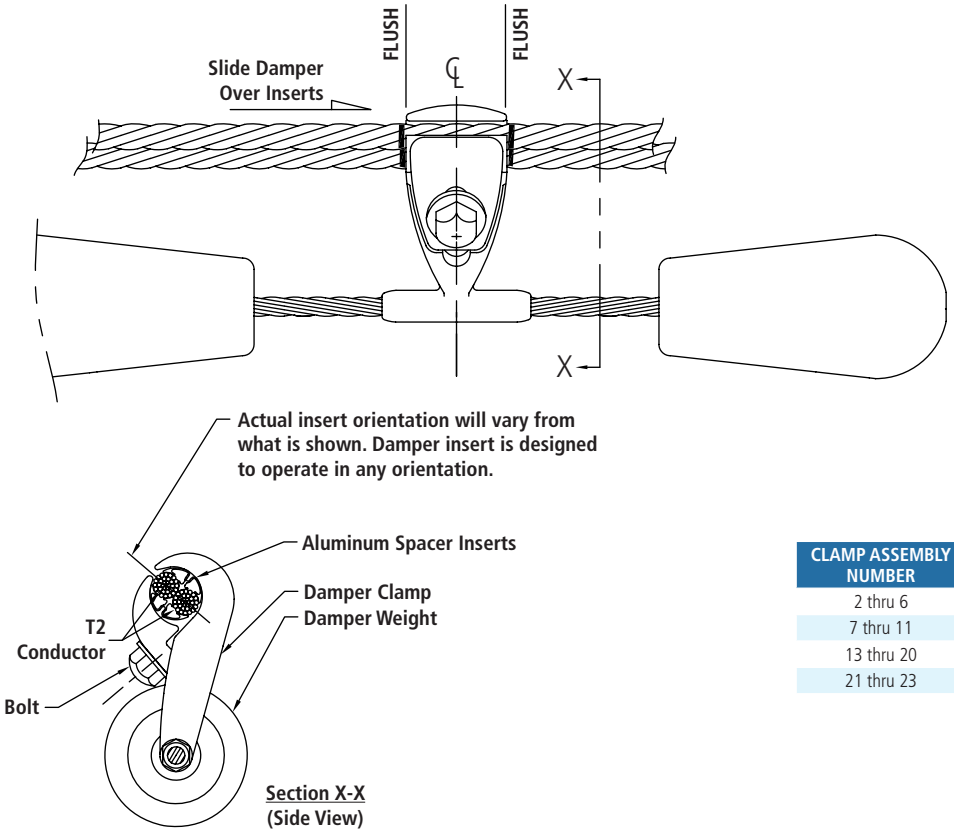
1700-T2 SERIES VIBRATION DAMPER

NOTE: DO NOT WRAP TAPE OVER THE INSERTS TO HOLD THEM TO THE CONDUCTORS, THIS WILL REDUCE THE DAMPERS SLIP STRENGTH AT THE CLAMP/INSERT INTERFACE

Procedure

Step 5 Slide the damper over the spacer inserts and tighten bolt finger tight. The spacers should align flush with the edge of the clamp as shown. NOTE: Damper weights should be located directly below the conductor as shown.

Step 6 Tighten the bolt with a torque wrench to the recommended value for the bolt size tabulated below. If the bolt has a breakaway outer head, tighten the bolt until breakaway head shears off.



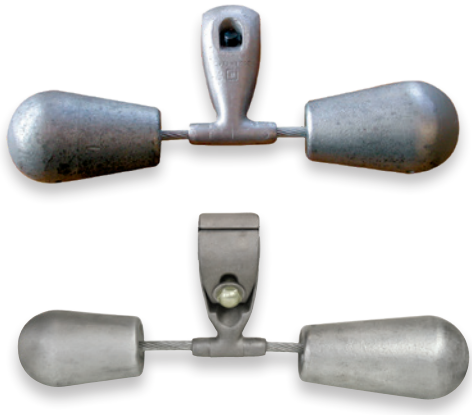
CLAMP ASSEMBLY NUMBER	BOLT DIAMETER Inch	TORQUE lbf-ft (N-m)
2 thru 6	7/16	20 (27)
7 thru 11	1/2	25 (34)
13 thru 20	5/8	40 (54)
21 thru 23	3/4	60 (81)

NOTE: Insert orientation may be different from illustration.

CAUTION: ***Follow installation instructions carefully. Improper installation can result in mechanical failure of the cable system and possible injury to persons handling or in the vicinity of the cable systems.***

Installation Instructions

Vibration Dampers 1700, 1700AA Series



GENERAL INFORMATION

AFL vibration dampers are produced with carefully designed and controlled surface finishes for High Voltage use. To maintain this quality, the dampers should be protected, preferably in their shipping containers, from dirt and foreign material prior to installation. Handling in the field should be with care to avoid mechanical damage. AFL Vibration dampers may be installed without disassembly of the clamp parts.

VIBREC® DAMPER RECOMMENDATION PROGRAM

The Vibrec damper recommendation program assists in damper requirements for transmission and distribution lines. For more information contact the AFL Technical Support Team at 1.800.866.7385.

INSTALLATION PROCEDURE

Step 1: (a) Obtain the damper spacing from AFL.
(b) At the tangent tower, the centerline of the damper should be the specified distance from the center of the suspension clamp.
(c) At the dead end location, the centerline of the damper should be the specified distance from the mouth of the dead end. Normally, for a phase conductor, a second damper is required at the dead end location; on a static wire, a second damper is usually not required at the dead end location. The centerline distance between the two dampers should be as specified.

******Note: For the 1700AA series dampers, the damper is approved to be installed with either the large weight toward the structure or the small weight toward the structure.******

Step 2: Loosen the bolt so that the clamp may be opened sufficiently to permit cable entry into the clamp groove.
Note: The bolt need not be removed.

Step 3: Hang the damper on the conductor at the proper spacing specified in Step 1 and tighten the bolt finger tight.

Step 4: Tighten the bolt with a torque wrench to the recommended value for the bolt size in the table below. If the bolt has a breakaway outer head, tighten the bolt until the breakaway head shears off.

CLAMP ASSEMBLY NUMBER	BOLT DIAMETER INCH	TORQUE LBF. FT (N.M)
2 thru 6	7/16	20 (27)
7 thru 11	1/2	25 (34)
13 thru 20	5/8	40 (54)
21 thru 23	3/4	60 (81)

VIBRATION PROTECTION RECOMMENDATIONS – SPACING NOTES

1. Tangent Spans – Phase Conductor and Overhead Ground Wire (OHGW)
   "Level One Damping" means one damper placement per conductor at one end of the span only. "Two dampers per conductor" means two damper placements (one damper placement at each end of the span).

2. Tangent Spans – Dead End at One End – Phase Conductor
   In spans dead ended at one end only, and requiring only one damper per conductor, the damper should be placed at the tangent structure, spaced in accordance with Dimension A or B. If the span requires three dampers per conductor, then one damper should be placed at the tangent structure, spaced in accordance with Dimension A or B, and two dampers should be placed at the deadended structure, spaced in accordance with Dimensions C and D. Normally, two dampers are recommended at conductor dead ends with insulator strings, as it is impossible to accurately predict the location of vibration node points relative to the conductor dead end. With just one damper at a dead end, the damper could, under certain wind conditions, be at a node point. The effectiveness of two dampers, spaced as recommended, assures that at least one of the two dampers will be effective at all times.

3. Tangent Spans – Dead Ended at One End – Overhead Ground Wire
   In spans deadended at one end only, and requiring only one damper per wire, the damper should be placed at the tangent structure, spaced in accordance with Dimension A or B. If the span requires two dampers per wire, then one damper should be placed at the tangent structure, in accordance with Dimension A or B, and one damper should be placed at the dead end, spaced in accordance with Dimension C.

4. Spans Dead Ended at Both Ends – Phase Conductor
   "Two dampers per conductor" means two dampers at one end of the span only, spaced in accordance with Dimensions C and D. "Four dampers per conductor" means two dampers at each end of the span, spaced in accordance with Dimensions C and D. Normally, two dampers are recommended at conductor dead ends with insulator strings, as it is impossible to accurately predict the location of vibration node points relative to the conductor dead end. With just one damper at a dead end, the damper could, under certain wind conditions, be at a node point. The effectiveness of a damper on a node is significantly reduced. The use of two dampers, spaced as recommended, assures that at least one of the two dampers will be effective at all times.

5. Spans Dead Ended at Both Ends – Overhead Ground Wire
   "One damper per conductor" means one damper at one end of the span, spaced in accordance with Dimension C. "Two dampers per conductor" means one damper located at each end of the span, spaced in accordance with Dimension C.

6. Spans Dead Ended at Both Ends, or Tangent Spans of Dead Ended at One End, For OHGW Utilizing a Formed Guy Grip Dead End
   We do not recommend the installation of damper clamps over formed-guy-grip type dead ends. Therefore, where vibration protection is required for spans using the formed type dead ends, two dampers will be required at each dead end location, with the first damper spaced at the end of the rods and the second damper located in accordance with Dimension D.

7. Dampers Over Armor Rods
   Dampers with the clamps placed over armor rods are not as effective as dampers with the clamp placed directly on the conductor. Therefore, if armor rods are used, the rods should be short enough as to permit installation of the damper clamp over the bare conductor, using the recommended Dimension B spacing. The Dimension B is used whenever armor rods, line guards or AGS units are specified. In the event the rod lengths are too long to permit installation directly on the conductor, the damper clamp must be selected to fit over the installed rods.

8. Selective Damping
   The ability of a damper to protect a given span may be hindered by vibration in adjacent undamped spans even though the vibration in the undamped spans is not at a damaging level for the undamped span. Therefore, damping of adjacent spans is suggested at times. For simplicity, the Vibrec® program recommends that spans adjacent to a span requiring dampers also be damped. AFL will, however, approve omission of dampers in spans shorter than the level zero limit when the adjacent damped spans are less than 50% of the one-damper limit.

9. If there are any questions with respect to the damper recommendations or placement, contact your local representative.

Installation Instructions

Spacer Dampers, Bolted Type

1. Check assembly to make sure all bushings are seated and that all bolts and washers are in position.

2. Loosen all 5/8”-11 spacer clamp break-away bolts to permit the clamp caps (Figure 1) to be rotated so that they will clear the conductor during installation.

3. Position the spacer damper on the two upper conductors. The top two clamp arms will rest on the conductors.

4. Rotate the two top caps so that they center on the conductor. Finger tighten each break-away bolt by first placing the hand over each clamp so that the edges of the clamp mouth close evenly and then finger tighten the bolt in each clamp.

5. Repeat step 4 for the bottom cap.

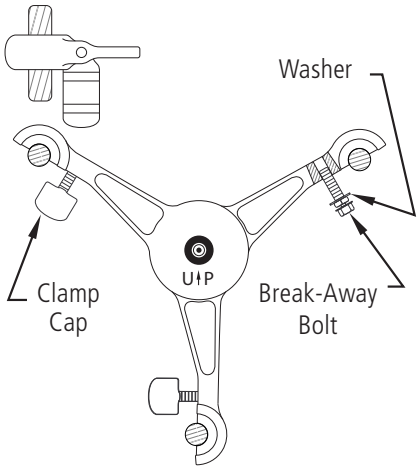

Figure 1

6. Position the spacer damper assembly perpendicular to the conductor centerline within tolerances shown in Figure 2.

7. Secure the spacer damper clamps to the conductor by tightening the 5/8” break-away bolt with a 15/16” hex socket wrench. Tighten each bolt until the upper bolt head shears off.
(Note: A washer head on the break-away bolt will position the socket wrench on the bolt head and prevent wrench engagement with the lower bolt head during tightening.)

8. Make a final inspection checking for clamp fit and alignment and to see that all break-away bolts have the upper heads sheared off.

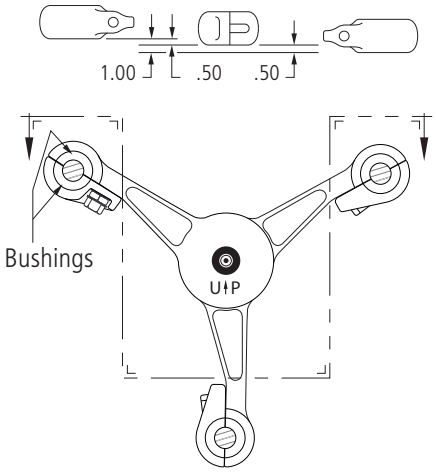

Figure 2

1 (800) 866-7385

Installation Instructions

T2 Speed-Grip® Spacer

1. Obtain the spacer location from the AFL Spacer Spacing Report. Mark the installation point on one T-2 conductor in the bundle.

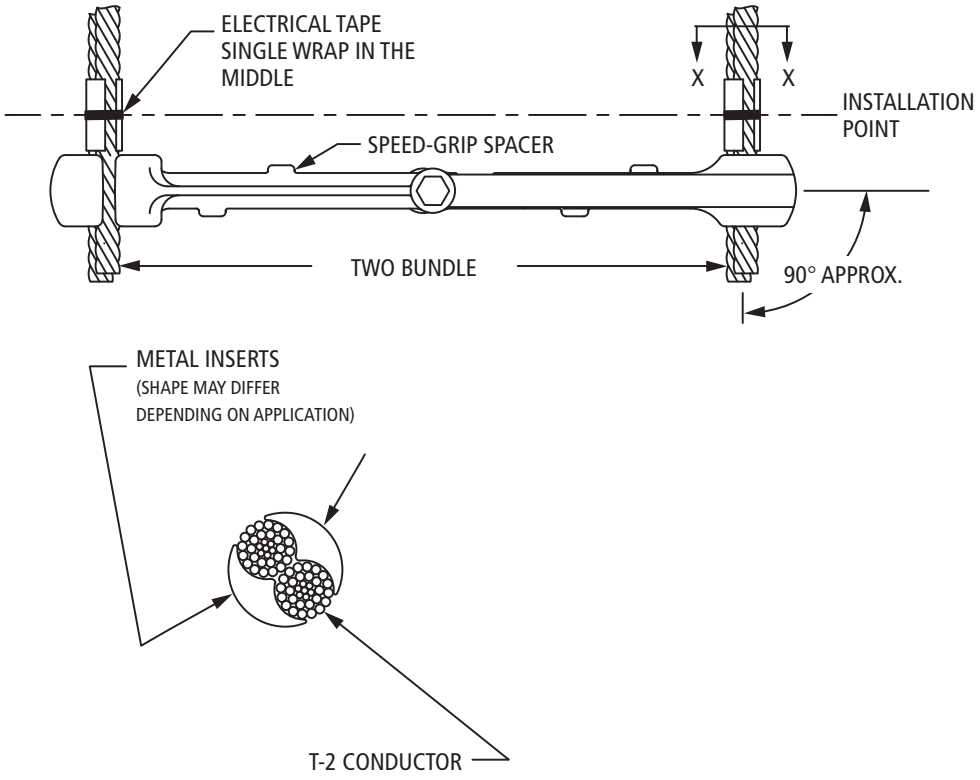
2. Position two (2) metal inserts on the marked location as shown in Fig. 1. Wrap one (1) layer of electrical tape around the inserts to keep them in place during installation.

CAUTION: Do not cover over half of the metal insert surface with tape and do not wrap more than one-and-a-half (1½) times around as it may affect the electrical and mechanical properties of the speed grip.

3. Loosen the speed-grip assembly casting by opening the clamp enough to clear the conductors and insert on each end. Assembly will be held in this position by hand tightening the wedge-lock pin tight enough to hold spacer halves in position when placed over conductor.

4. Position the speed-grip spacer on the conductor adjacent to the installed set of inserts as shown in Fig. 1. Using the spacer as a guide, locate where the second set of inserts must be positioned to make the speed grip perpendicular to both conductors.

Fig. 1



SECTION X-X
(ENLARGED)

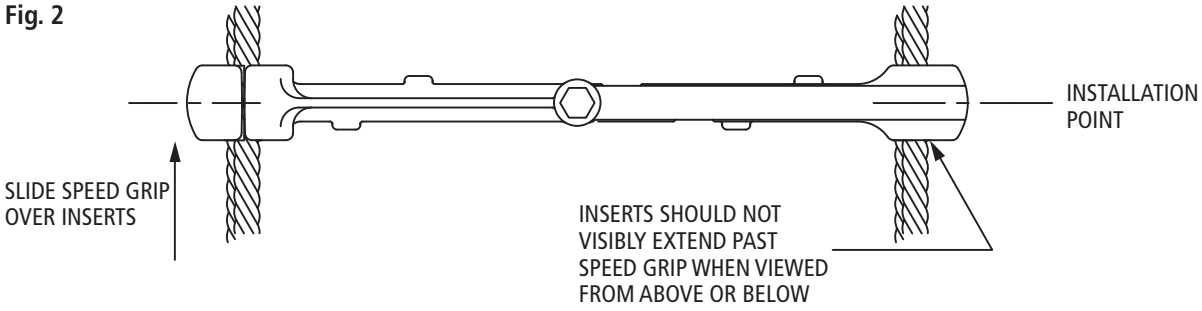
5. Install the second set of inserts using one (1) layer of electrical tape to keep them in place.

Installation Instructions (cont.)

T2 Speed-Grip® Spacer

6. Slide the speed grip over the spacers such that they are fully surrounded by the speed-grip bushings (see Fig. 2), while retaining the perpendicular stance against the conductors.

Fig. 2



7. Loosen wedge-lock pin and close the spacer halves on the conductors. At this position, the point of the pin will be in a position to permit engagement with the lower spacer half lock hole. Hand tighten pin to engage pin with lower spacer half lock hole (see Fig. 4).

Fig. 3

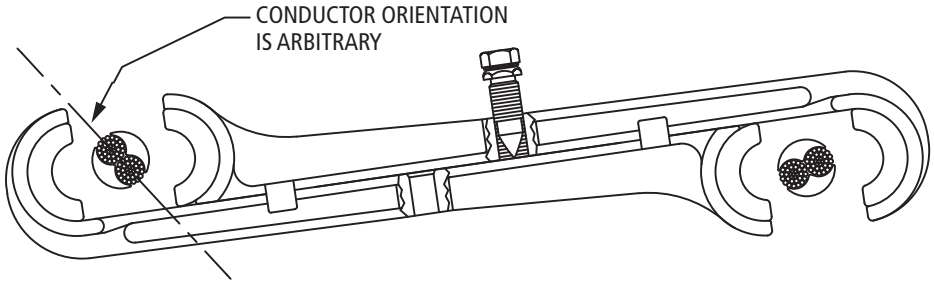


Fig. 4

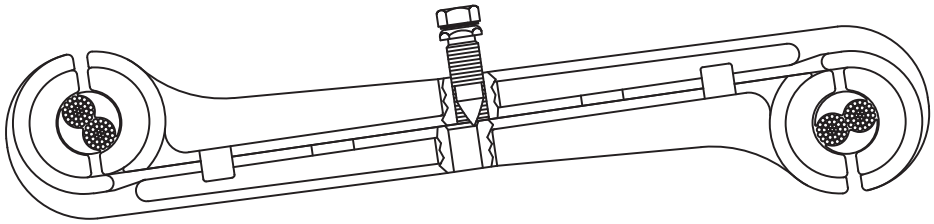
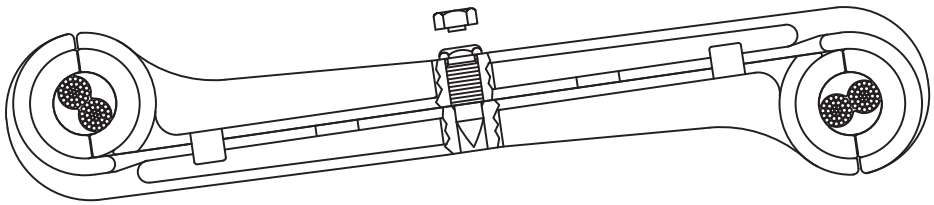


8. Using a socket wrench, tighten wedge-lock pin until break-away head shears off. It is recommended that a 12" ratchet wrench with a 6-point deep socket be used. Nominal break-away torque is 40 lbf-ft for the 5/8 aluminum break-away wedge-lock pin and 47 lbf-ft for the 3/4 (see Fig. 5).

Fig. 5

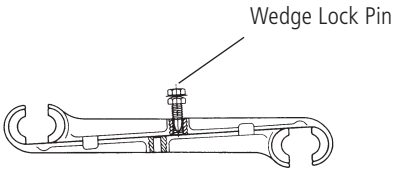


9. Make final visual inspection to ensure that spacer is properly seated on conductors, wedge-lock pin head bottomed, and if pin head is free from burrs which might have occurred during installation.

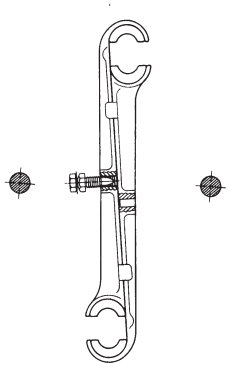
Installation Instructions

Speed-Grip® Spacers

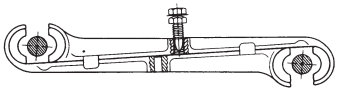
1. Prior to installation, slide open the spacer assembly giving a clamp opening of approximately 1½ times the conductor diameter. Finger-tighten the wedge-lock pin enough to hold the spacer assembly in the open position.



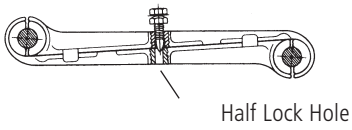
2. Position spacer assembly between the two conductors, so that it is perpendicular to the conductors.



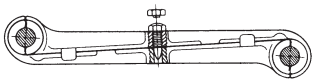
3. Rotate the spacer assembly until the conductors rest in the open clamps.



4. Loosen the wedge-lock pin and slide the spacer assembly closed. Finger-tighten the wedge-lock pin to engage the pin with lower spacer half lock hole.



5. Using a 12" (30 cm) ratchet wrench with a 6-point deep socket, tighten the wedge-lock pin until breakaway head shears off.



6. Make final visual inspection to ensure that the spacer is properly seated on the conductor, shear head is missing and the wedge-lock pin head is free of burrs.

Installation Instructions

Spring-Type Spacers

1. Loosen bolts so that the clamp may be opened sufficiently to permit cable entry into the cable groove.

2. Align the clamps on the conductors. The spring should be straight and perpendicular to both conductors.

3. Tighten bolts with a socket wrench (thin wall recommended). Bolts of each clamp should be tightened in sequence for best results. Tighten one bolt to approximately 15 lb-ft (20N.m), then tighten the second bolt until torque control head shears off. First bolt should then be tightened until the torque control head shears off.

FORMED WIRE ACCESSORIES

Armor Rods

Armor rods are designed to protect the conductor by reducing bending, compression, and abrasion at the support point. Protection against flashover damage is also provided. Armor rods are recommended as protection for spans greater than 300 ft. (91 m). Manufactured from either aluminum alloy, Alumoweld®, or galvanized steel, they are designed for use
with ACSR, AAC, AAAC, ACSS, SSAC, TW Types and ACAR conductors as well as Alumoweld® and steel ground wire. All rod sets are manufactured with right-hand lay as standard for aluminum-based material and left hand lay for Alumoweld and steel ground wire.

Features

Color Coded and Center Marked

For ease of identification to conductor size, the armor rods are color coded in the center of the rod. This feature also assists in alignment of the rods during installation.

Repair Damage

When no more than 50% of the outside strands on an ACSR or aluminum conductor have been damaged outside the support point, armor rods may be used to restore 100% of the rated conductance and strength of the line.

Vibration Protection

Installing armor rods improves the conductor's ability to withstand the fatigue forces associated with aeolian type vibration. They do not function as vibration control devices. For assistance in determining the proper vibration protection, contact the AFL Technical Support Team or visit our website at www.Vibrec.com.

Tap Over

Armor rods may be tapped over on ACSR and aluminum conductor, but not on Alumoweld, or steel ground wire. Where tapping is used, it is strongly recommended that the conductor is thoroughly wire brushed and an oxide inhibitor be applied.

Extra High Voltage Applications

For 345 kV and above, the armor rod ends are modified to eliminate Corona effects and include a suffix of 'EHV' at the end of the AFL part number.

Customized Armor Rods

For armor rods with special requirements, such as longer lengths or non-standard lay direction contact the AFL Technical Support Team at 1-800-866-7385.

Ordering Information

Configuration		Material		Basic Unit		Numeric Range		Voltage Range
@	—	@@	—	AR	—	###	—	@@@
Blank - Single Support D - Double Support		A - Aluminum AW - Alumoweld S - Galvanized Steel		Series Designation		Numeric Range Code (from catalog)		Blank - < 345 kV EHV - ≥ 345 kV

Example: For single 795 26/7, Aluminum conductor diameter of 1.099 to 1.139 inches and Extra High Voltage, the complete catalog number is: **AAR279EHV**

*PLP is a trademark of Preformed Line Products.

Line Guards

Line guards are designed to protect the conductor by reducing bending, compression, and abrasion at the support point, particularly where hand-ties are used. Line guards are recommended as protection for spans of less than 300 ft. (91 m). Manufactured from aluminum alloy, they are designed for use with ACSR, AAC, AAAC, ACSS, SSAC, TW Types and ACAR conductors. All guard sets are manufactured with right-hand lay as standard.

Features

Color Coded and Center Marked

For ease of identification to conductor size, the line guards are color coded in the center of the rod. This feature also assists in alignment of the rods during installation.

Repair Damage

When no more than 25% of the outside strands on an ACSR or aluminum conductor have been damaged outside the support area, line guards may be used to restore 100% of the rated conductance and strength of the line. Do not use line guards for repair at the support point.

Tap Over

Line guards may be tapped over on ACSR and aluminum conductor. Where tapping is used, it is strongly recommended that the conductor be thoroughly wire brushed and an oxide inhibitor be applied.

Extra High Voltage Applications

For 345 kV and above, the line guards ends are modified to eliminate Corona effects and include a suffix of 'EHV' at the end of the product number.

Customized Line Guards

For line guards with special requirements, such as longer lengths or non-standard lay direction contact the AFL Technical Support Team at 1.800.866.7385.

Ordering Information

Configuration		Material		Basic Unit		Numeric Range		Voltage Range
@	—	@@	—	LG	—	###	—	@@@

SUSPENSION PRODUCTS

HIBUS® Suspension for Conductors

The HIBUS clamp is designed to reduce static and dynamic stress at the attachment point on transmission conductors without the use of armor rods or line guards. Rated for 250°C operation, the HIBUS clamp has a specially formulated bushing material for high temperature conductors. The hinged concept on the suspension configuration provides self-alignment of the housing halves. All hardware is captive except for the mounting pin.

Test results have shown that the unique bushing system significantly reduces the bending strain level produced by the effects of Aeolian vibration as compared to standard clamps using armor rods or line guards. This proven level of performance eliminates the need for any type of attachment using rods. Test reports available include corona test, high temperature profile, standard and high temperature slip, ultimate strength, and catastrophic conductor failure impact strength.

Features

- Suitable for all ACSR and ACSS conductors
- Self-aligning housing halves
- Stress relief bushings reduce bending strain 40%
- Aluminum clamp body with captive stainless steel mounting bolts
- Galvanized steel mounting pin with two washers and cotter pin for added security
- Optional bolt, nut, and cotter pin (“BNC” suffix) available on some sizes. Contact AFL for availability.
- Optional Live-line Attachment Tool available
- Line angles up to 30° for single unit, up to 60° for two units
- Rated for 500 kV applications
- Rated for 250°C high temperature applications (with special bushings)

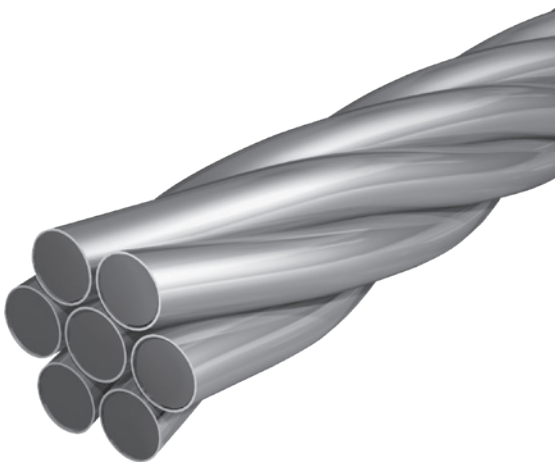
Alumoweld® Wire and Strand

Alumoweld wire consists of a thick cladding of pure aluminum over a high-strength steel core. Alumoweld wire offers the advantages of each metal. It is ideal for overhead ground wire, neutral messengers, line wire and guy strand. Alumoweld wire and strand is used by power utilities, as well as formed wire and optical ground wire manufacturers. Alumoweld outlasts other options by as much as 200% in corrosive environments, significantly lowering maintenance and replacement costs. When compared to solid aluminum wire, Alumoweld offers tremendous savings.



How is Alumoweld made?

The Alumoweld process consists of a continuous application of a pure atomized aluminum powder to a high strength steel rod. Proper control of heat and pressure refines the cladding and develops a controlled atomic weld. The resulting bimetallic rod is then cold drawn into finished wire sizes without changing original proportions of aluminum and steel.

Features

Thick Aluminum Covering

Alumoweld wire is produced with the concentric aluminum covering comprising 25% of the cross-sectional area, with the aluminum thickness 10% minimum of the wire radius. The high proportion of aluminum offers an excellent degree of electrical conductivity and permanently protects the high strength steel core.

High Conductivity

Compared to solid aluminum wire of the same diameter, Alumoweld wire has a direct current conductance of 33%. It has about three times the conductivity of galvanized steel wire. For high frequency currents where "skin effect" is a factor, the conductivity of Alumoweld wire approaches 100% of solid aluminum. When Alumoweld wires are combined with aluminum wires in composite conductors, a wide range of strength and conductivity characteristics is possible.

Corrosion Resistance

The thick aluminum cladding of Alumoweld wire provides a high degree of corrosion resistance, resulting in longer service life and reduced maintenance. Accelerated laboratory tests exposing Alumoweld wire to various types of corrosive conditions have proven that Alumoweld wires have corrosion resistance comparable to EC grade aluminum. The conditions simulated in the test included industrial, marine and tropical.

Combines High Strength with Low Weight

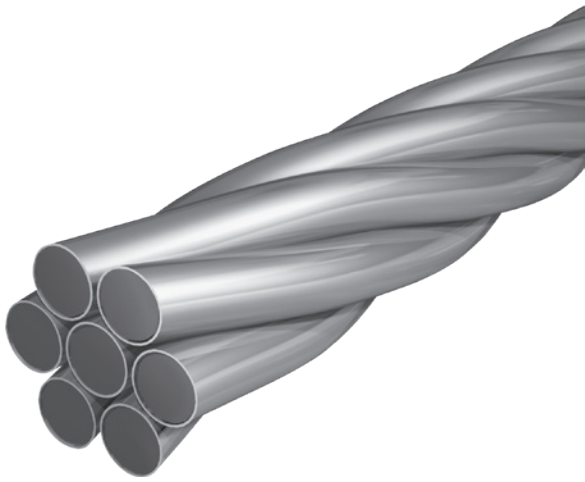
Alumoweld wire has a higher strength-to-weight ratio than any other wire commonly used on overhead lines. Size for size, it has about the same tensile strength as extra high strength steel wire, but weighs less. It has eight times the strength of solid aluminum wire of the same diameter and only a little more than twice the weight. This high strength-to-weight ratio provides a maximum margin of safety for long-span construction. The strength of Alumoweld's steel core is protected by the thick aluminum covering.

Applications

- Utility Market
- Telecommunications Market
- Military
- General Industry Applications

Alumoweld® Overhead Ground Wire

Alumoweld wire and strand are used by power utilities, as well as formed wire and optical ground wire manufacturers. Alumoweld is suitable in corrosive environments, lowering maintenance and replacement costs.



Features

Corrosion Resistance

Alumoweld overhead ground wire has excellent corrosion resistance. Its strength and conductivity remain unchanged in any atmosphere where aluminum is satisfactory, especially those known to be corrosive from industrial or atmospheric conditions.

This assurance against corrosion is obtained through the application of a thick covering of pure aluminum, which provides a substantial barrier of protective metal. The minimum cladding thickness of Alumoweld is 10% of the radius of the wire. The cladding has a continuous, strong metallic bond to the steel core that will not crack or flake.

Strength Comparable to Steel

Alumoweld also provides strength greater than or comparable to other overhead ground wires. For commonly used wire sizes, the tensile strength of the individual wire can approach 200,000 pounds per square inch. When used in a strand for overhead ground wire, this high strength permits greater span lengths, less sag, and heavier loads under storm loading conditions.

Lightweight

Directly related to strength and sag performance is the lighter weight of Alumoweld. This lighter weight, combined with high strength, permits Alumoweld to be installed to the same sags as steel with correspondingly lower tensions and lower stresses on the towers or supporting structures.

Applications

- Overhead ground wire
- Shield wire protecting transmission lines against lightning damage

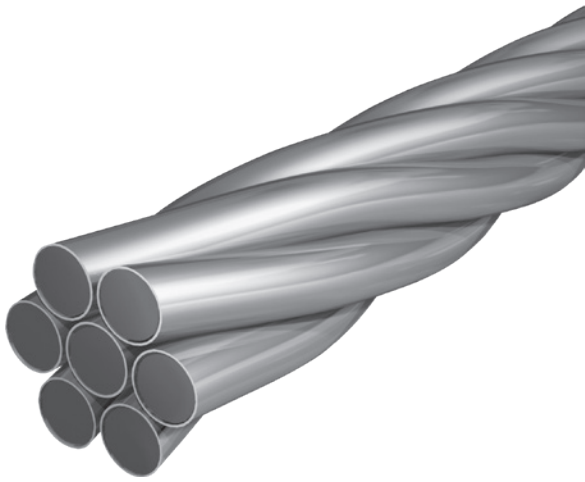
Alumoweld® Type M Guy Strand

Alumoweld Type M Guy Strand is an economical, corrosion resistant guying material for use on overhead line structures. The thick cladding of aluminum on each wire protects the high-strength steel core from rusting and subsequent loss of strength. Costly maintenance is eliminated, and the original safety factor of the guy is maintained throughout the life of the line.



Features

Thick Aluminum Cladding

The Alumoweld wire used to make Type M guy strand is unique in that the aluminum cladding thickness is guaranteed to be no less than 10% minimum of the wire radius. This, a thick corrosion barrier, that is pure aluminum not zinc or an iron-aluminum alloy, protects the steel core.

Another important feature of any coated or clad wire is the bond between the coating material and the base metal. In the case of Alumoweld wire, and aluminum cladding and steel core are joined by a continuous ductile weld. This assures against cracking or separation of the protective aluminum from the steel core.

Lightweight and Convenient

Directly related to strength and sag performance is the lighter weight of Alumoweld Type M Guy Strand. This lighter weight, combined with high strength, permits Alumoweld to be installed to the same sags as steel with correspondingly lower tensions and lower stresses on the towers or supporting structures.

Applications

- Power lines
- Telephone lines
- Railway signals
- Communication lines
- Towers Masts

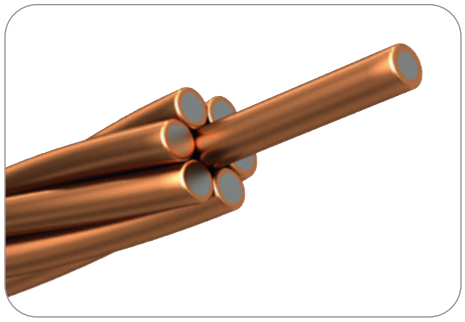
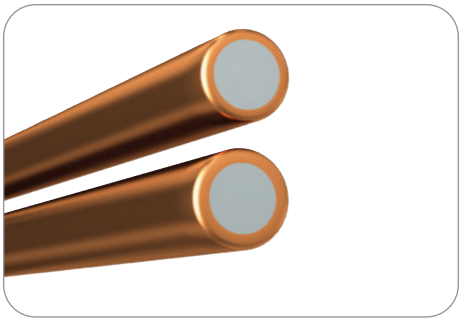
19-strand Copperclad Steel Wire



7-strand Copperclad Steel Wire



Single strand Copperclad Steel Wire in large and small diameters

OnyxCCS® Copperclad Steel Wire

Copperclad Steel Wire

AFL's Copperclad Steel Wire is the ideal solution for grounding wire for power type applications. Composed of a steel core with coppercladding, the steel wire gives the wire its strength and the consistent layer of copper provides electrical conductivity and resistance to corrosion.

To manufacture Copperclad Steel Wire, carbon steel (low, high strength and extra high strength) is bonded with a uniform layer of oxygen-free coppercladding to achieve 30% and 40% IACS (International Annealed Copper Standard) conductivities. The material is available in a single wire, 3, 7 and 19 cable strands with some sizes jacketed to give the wire a different appearance to copper.

Features

- Demonstrates the same corrosion-resistant properties as copper while maintaining the high strength of steel
- Reduces damage caused during installation or fatigue from vibration or bending
- Special heat treat process results in a very malleable wire called Dead Soft Annealed (DSA)
- Copper permanently bonded to the steel core prevents corrosion of the steel core.
- Very little scrap value, discouraging theft and leaving the grounding system intact
- Compliant with IEEE 80
- Manufactured in accordance with ASTM specifications (B258, B910/B910M, B229, B228, B227)

Dead Soft Annealed Copperclad Steel Wire

Copperclad Steel Wire is a strong, non-rusting, efficient grounding conductor. It is composed of Coppercladding that is permanently bonded to the central steel core of each wire. Copperclad provides the same conductivity and corrosion resistance as copper while maintaining the high strength of steel. Dead Soft Annealed (DSA) Copperclad Steel Wire is very flexible for easy preparation and installation.

When compared to solid copper, Copperclad Steel Wire has faster impedance to ground for better protection of lines and equipment plus a higher resistance to thermal expansion failures. It also reduces the fatigue damage caused by more than 10 times that of annealed solid copper.

Copperclad Steel Wire is an excellent solution for areas with high rates of copper theft as the amount of copper used in the bonding process is minimal—6% to 10% depending on the conductivity. When Copperclad Steel Wire is used in place of copper, the grounding conductor is far less likely to be stolen. This feature is important not only from an economic standpoint, but also from the standpoint of safety and reliability. Often, the fact that a copper downlead has been removed is not evident until a surge current causes a failure in the system.

OnyxCCS® Copperclad Steel Wire

OnyxCCS offers the same benefits as standard Copperclad Steel (CCS) while protecting against copper theft. In addition to the inherent strength of a CCS product, OnyxCCS has a chemically-etched surface treatment which permanently darkens the standard CCS. This process discourages theft of a utility's copper infrastructure and does not compromise mechanical nor electrical properties.

OnyxCCS is offered in all sizes of the AFL Copperclad product line. To order OnyxCCS, the part number pre-fix "CCX" replaces "CCS". EX: **CCX**07074DR1000F

AFL's Swage Grounding Coupler compressed onto 19-strand Copperclad Steel Wire

Selecting the Right Size for the Application

When selecting a conductor for a ground grid, it must meet the maximum fault current for the identified duration and meet a minimum breaking load as required by the substation design (typically 5,000 pounds). The key to properly sizing copperclad steel wire is the actual fault current requirement. Often copper is physically oversized to gain the physical strength needed in the application. With Copperclad, the physical strength is inherent to the product so the primary consideration is electrical. Table below compares the ampacity ratings of copper and Copperclad Steel Wire which allows the user to visually select the Copperclad equivalent. For example:

Requirements: The equivalent to 4/0 copper per the IEEE Fusing Chart is 19#9 40%. A typical maximum fault current for a distribution substation is ~18 kA at 30 cycles. Most engineers upsize to 4/0 copper in order to meet the mechanical strength requirement.

AFL solution: A 2/0 copper or 7#6 Copperclad Steel Wire conductor will meet this requirement instead of the larger size 4/0 copper commonly used for ground grids. The conductor safety margin for 7#6 Copperclad Steel Wire is 30% and meets the fault current and mechanical strength requirements.

DSA Copperclad Steel Wire
Jacketed Material

Copperclad Steel Wire from AFL can be jacketed to further reduce copper theft and is available in black with green stripe or grey. Available sizes are shown in the chart below, Table 1. Please contact AFL for larger sizes not shown.

6 AWG Solid with grey PVC Jacket

7#7 AWG with black with green stripe PVC jacket

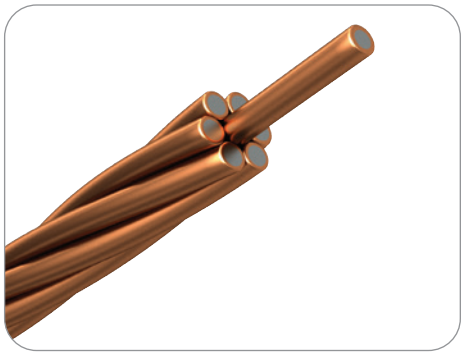
Copperclad Steel Wire—High Strength/Extra High Strength



7-strand Copperclad Steel Wire

High Strength (HS) and Extra High Strength (EHS) copperclad steel wire provides the same conductivity and corrosion resistance as copper while maintaining the high strength of steel. Frequently used for overhead ground wire and messenger wire, HS and EHS copperclad Steel Wire can resist mechanical damage caused during installation plus electrical damage during a fault condition. The core carbon steel is bonded with a uniform layer of oxygen-free coppercladding to ensure that the copper will not flake, crack or peel when the wire is twisted, installed or buried.

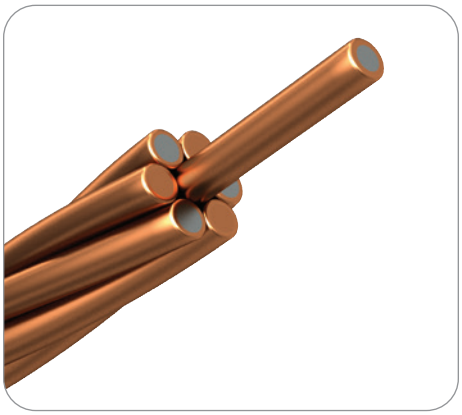
Copperclad Composite (CCC) Conductors



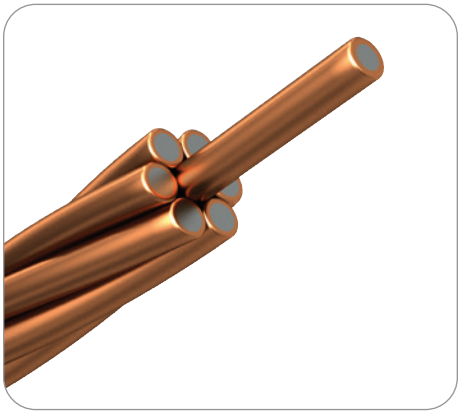
Type K—4 Copperclad Steel Wires and 3 Copper Wires

Copperclad Composite (CCC) Conductors provide strength and conductivity by combining hard drawn copper with 30% conductivity EHS Copperclad Steel Wire. With its steel component, the CCC conductor achieves a higher tensile strength.

CCC conductors feature a higher ampacity for the same wire size as standard Copperclad Steel Wire.

Ordering Information

Contact AFL for detailed specifications not shown.



7-strand Copperclad Steel Wire

Copperclad Type M Guy Wire

Copperclad Type M guy wire is an economical, corrosion-resistant guying material for use on overhead lines. The coppercladding that is bonded on each wire protects the high-strength steel core from rusting and subsequent loss of strength.

Ordering Information

Contact AFL for detailed specifications.

For additional information on Copperclad Composite Conductors, contact AFL.

Copperclad Part Number Nomenclature

Ordering Information

Step 1: Determine Catalog Number.

Step 2: Determine Package Code.

Step 3: Assemble complete part number—Catalog Number + Package Code

- Example: For a 2,000 ft. reel of 40% and 7#8 DSA, the complete part number is CCS07084DR2000F.

Step 1—Catalog Number

CATALOG NUMBER (NOT ALL SIZES LISTED)		
CONDUCTOR CONFIGURATION	30% CONDUCTIVITY	40% CONDUCTIVITY
#6 Jacketed		CCS01064D-JV*

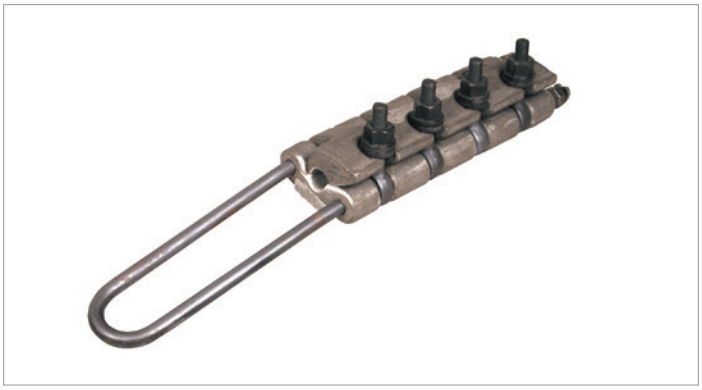
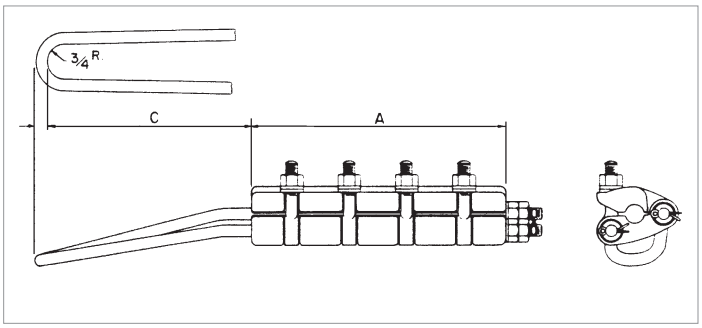
Comealongs for ACSR, AAC, AAAC and ACAR Conductors, 3000, 3100 and 3200 Series





Comealongs are stringing tools designed for pulling conductors up to initial sag tensions. If the required tension is greater than the rated tension of a single comealong, two or more comealongs should be used (see Installation Instructions page 131). When desired sag tension is reached, the conductor should be dead ended promptly and the comealong removed.

Comealongs must receive periodic maintenance. This practice should consist of a thorough cleaning with close inspection for nicked or rough conductor grooves, cracked body, bent eye bolts, or damaged bail. The eyebolts should be kept clean and oiled. The conductor groove should be kept clean and dry. After each six months use and at the beginning of each job, all comealongs should be subjected to a pull test equal to its rated strength. If any damage is found, the comealong should be disposed of properly.

Features

Rugged Design

The 3000, 3100 and 3200 Series Comealongs are highly engineered products. The comealong body is heat-treated for increased strength. The eyebolts are forged from high strength steel. The bail receives both magnaflux and dye check inspection to give high assurance of metal quality.

Fully Assembled

The 3000, 3100 and 3200 Series Comealong comes with all parts fully assembled and ready for use. Double lock nuts with cotter pins maintain proper body location. Peened eye bolts prevent loss of compression nut/washer combination.

Angled Bail

During installation, the angled bail of the comealong provides clearance between the chain link hoist and the conductor. This prevents damage to the conductor and allows ease of accessory installation.

Each Comealong Tested and Rated

Each 3000, 3100 and 3200 Series Comealong is designed for ACSR, AAC, AAAC and ACAR conductors. Every comealong ordered is individually tested prior to shipment.

Ordering Instructions

Select the comealong catalog number based on the diameter conductor being used.

Example:

For 795 Drake, the diameter is 1.108 inches. The comealong catalog number is:

3083

Notes:

1. Installation instructions for comealongs are on pages 516 and 517.

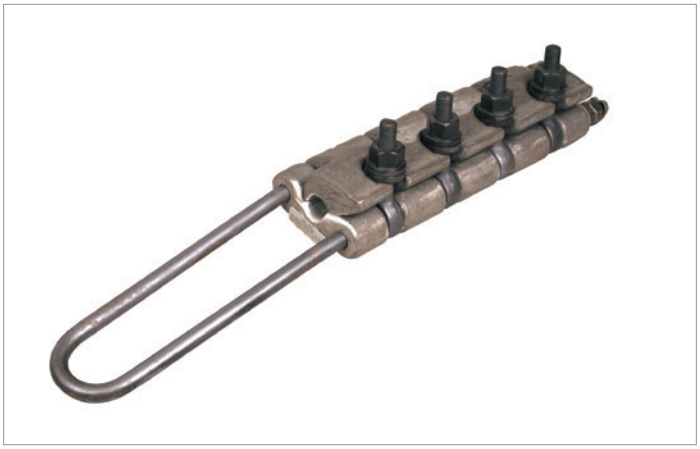
WARNING: Comealongs are not intended for use as dead ends and are not recommended to hold conductors at sag tension limits for longer than 6 hours.

HiTemp® Comealongs for ACSS and ACSS/TW Conductors 400000HT and 410000HT Series



HiTemp Comealongs are stringing tools designed for pulling conductors up to initial sag tensions. If the required tension is greater than the rated tension of a single comealong, two or more comealongs should be used (see Installation Instructions on pages 430 and 431). When desired sag tension is reached, the conductor should be dead ended promptly and the comealong removed.

Comealongs must receive periodic maintenance. This practice should consist of a thorough cleaning with close inspection for nicked or rough conductor grooves, cracked body, bent eye bolts, or damaged bail. The eyebolts should be kept clean and oiled. The conductor groove should be kept clean and dry. After each six months use and at the beginning of each job, all comealongs should be subjected to a pull test equal to its rated strength. If any damage is found, the comealong should be disposed of properly.

Features

Rugged Design

HiTemp Comealongs are highly engineered products. The comealong body is heat-treated for increased strength. The eyebolts are forged from high strength steel. The bail receives both magnaflux and dye check inspection to give high assurance of metal quality.

Fully Assembled

The HiTemp Comealong comes with all parts fully assembled and ready for use. Double lock nuts with cotter pins maintain proper body location. Peened eye bolts prevent loss of compression nut/washer combination.

Angled Bail

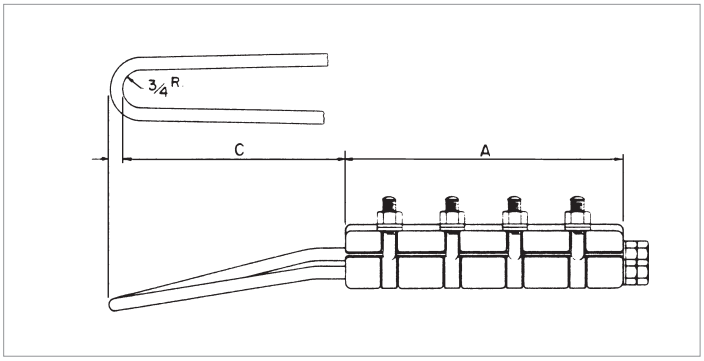
During installation, the angled bail of the comealong provides clearance between the chain link hoist and the fully annealed conductor. This prevents damage to the conductor and allows ease of accessory installation.

Each Comealong Tested and Rated

Each HiTemp Comealong is designed for a specific ACSS or ACSS/TW conductor. Generally, the rating of the comealong will be between 20% and 50% of the ASTM rated strength of the conductor. The actual rating will be determined after testing and stamped on the comealong in pounds. Every comealong ordered is individually tested prior to shipment.

WARNING: Comealongs are not intended for use as dead ends and are not recommended to hold conductors at sag tension limits for longer than 6 hours.

HiTemp® Comealongs for ACSS Conductor, 400000HT Series



The 400000HT Series Comealong is specifically design for ACSS conductors. Each comealong is tested and identified for a specific conductor size.

Fully annealed strands of ACSS conductor will relax in a properly fitted comealong. This relaxation will result in a reduction in clamping force over time. ACSS conductors set quickly, resulting in larger amounts of creep in a shorter period of time compared to ACSR conductors. Therefore, comealongs are NOT intended for use as dead ends and are NOT recommended to hold conductors at sag tension limits for longer than 6 hours.

Ordering Instructions

Select the Comealong catalog number based on the conductor being used.

Example:

For 795 Drake ACSS Conductor, the Comealong catalog number would be:

401108HT

Notes:

1. For every two Comealongs ordered, the customer must furnish AFL a minimum of 10 feet of the specified conductor. All Comealongs are 100% tension tested.
2. Installation Instructions for Comealongs are on pages 516 and 517.

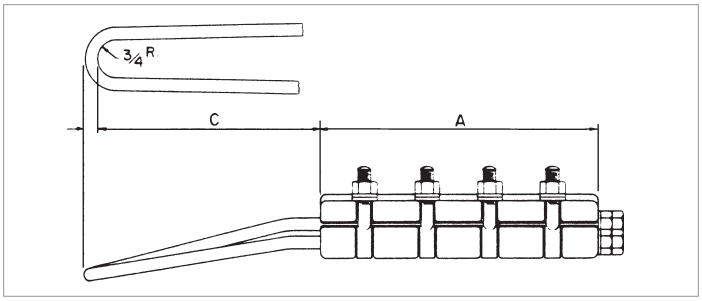
HiTemp® Comealongs for ACSS/TW Conductor, 410000HT Series



The 410000HT Series Comealong is specifically design for ACSS/TW conductors. Each comealong is tested and identified for a specific conductor size.

Fully annealed strands of ACSS/TW conductor will relax in a properly fitted comealong. This relaxation will result in a reduction in clamping force over time. ACSS/TW conductors set quickly, resulting in larger amounts of creep in a shorter period of time compared to ACSR conductors. Therefore, comealongs are NOT intended for use as dead ends and are NOT recommended to hold conductors at sag tension limits for longer than 6 hours.

Ordering Instructions

Select the Comealong catalog number based on the conductor being used.

Example:

For 795 Drake ACSS/TW Conductor, the Comealong catalog number would be:

410993HT

Notes:

1. For every two Comealongs ordered, the customer must furnish AFL a minimum of 10 feet of the specified conductor. All Comealongs are 100% tension tested.
2. Installation Instructions for Comealongs are on pages 516 and 517.

Installation Instructions

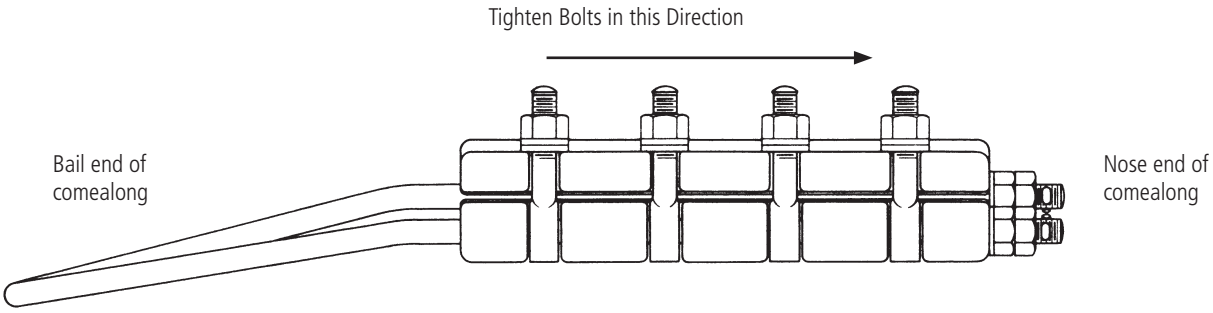
Comealongs

Unused Comealongs

1. Loosen bolts so that the comealong may be opened sufficiently. Check for cleanliness of bore and permit conductor entry into the conductor groove.
2. Position the comealong a minimum of 10 feet from the dead end or joint being installed. This will assist in reducing the potential for birdcaging of the conductor during compression.
3. Place the conductor into the conductor groove of the comealong, then close the comealong and finger tighten the bolts.
4. Using a torque wrench, tighten bolts in sequence from bail end to nose of the comealong (see diagram below). It will take a minimum of 6 passes to achieve the correct torque on each bolt. On the first pass, tighten the bolts to 80% of the target torque (1/2″ bolt - 32 lb ft, 5/8″ bolt - 48 lb ft). On each subsequent pass, tighten the bolts to the target torque (1/2″ bolt - 40 lb ft, 5/8″ bolt - 60 lb ft), ensuring proper clamping force is achieved.

Used Comealongs

1. Comealongs must receive periodic maintenance. This practice should consist of a thorough cleaning with close inspection for nicked or rough conductor grooves, cracked body, bent eyebolts or damaged bails. The eyebolts should be kept clean and oiled (McLube 1708L or equivalent). If any damage is found, the comealong should be disposed of properly.
2. After cleaning, each comealong should be subjected to a pull test equal to the rated strength stamped on the comealong.
3. Follow sequence 1 through 4 for Unused Comealongs above.



WARNING: Comealongs are not intended for use as dead ends and are not recommended to hold conductors at sag tension limits for longer than 6 hours.

Installation Instructions

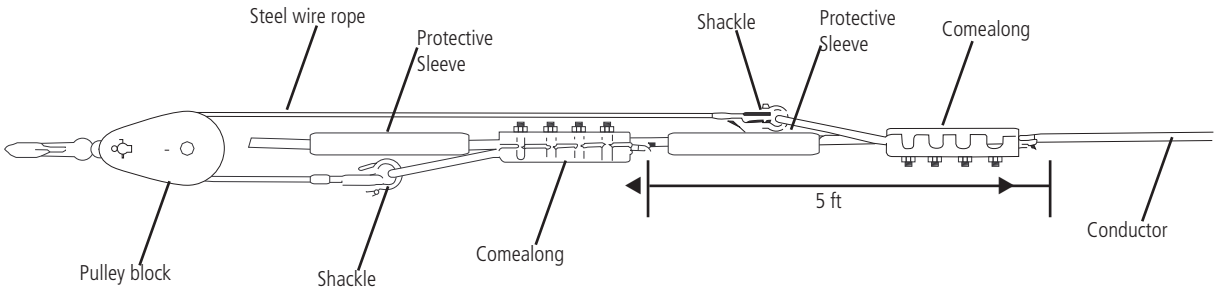
Comealongs

Using Comealongs in Tandem

1. If the installation tension is greater than the rated strength of one comealong, then comealongs must be used in tandem. The comealong bails should be bridled with a sling (consisting of shackles and wire rope) and pulley block to insure equal distribution of the load. To prevent damage to the conductor by the shackles, place protective sleeves over the conductor (per drawing above).

2. The rated strength of this tandem configuration is 150% of the lowest rated comealong. For example, if one comelaong is rated for 8,000 lbs and the other rated for 10,000 lbs, then these two comealongs in tandem will have a rated strength of 12,000 lbs (150% of 8,000 lbs).

   For more information on using comealongs in tandem, contact the AFL Technical Support Team at 1.800.866.7385.



WARNING: Comealongs are not intended for use as dead ends and are not recommended to hold conductors at sag tension limits for longer than 6 hours.

COMPOUNDS

HiTemp® Universal Compound (HiTUC) for Filler and Pad-to-Pad Connections

AFL's HiTemp Universal Compound (HiTUC) is the recommended inhibitor as a filler for compression fittings, as well as a joint compound for pad-to-pad connections for the increased temperature requirements in today's Utility market.

It has been designed to withstand the increased operating temperatures of high temperature/low sag conductors (ACSS, ACCR, etc.). If kept in a dry place, HiTUC has a three-year shelf life.

Features

Low Electrical Resistance
HiTUC contains extremely hard metallic particles with sharp and irregular shapes of carefully controlled grain size. This forms many metal to metal contact points for low contact resistance.

Wide Temperature Tolerance
HiTUC has a wide temperature range. It is workable at low temperatures -40°C (-40°F) and does not drip at high temperatures. It has a melting point above 250°C (482°F).

Improves Current Flow
During compression, the metallic particles (grit) contained in HiTUC are embedded between the conductor and the inside wall of the accessory, creating an irregular surface. This irregular surface improves conductivity by forming more metal to metal connections. The grit also acts as a wire brush on the aluminum oxide that has formed on the inside of the tubular accessory. This same grit creates a low resistance connection in bolted pads of dead ends, terminals and tee taps.

Moisture Resistant
As the accessory is compressed, HiTUC is forced between the conductor strands, sealing out the harmful effects of harmful contaminates, water and salt.

Fits Standard Caulking Gun
AFL is the only supplier that features a sight gauge along the length of the tube that allows the user to check the remaining amount. For easy filling of compression accessories, HiTUC fits a standard caulking gun.

Applications

- Filler compound and pad-to-pad connections for compression accessories installed on conductors operating at temperatures up to 250°C (482°F)
- Dead ends, joints, terminals, tee taps and jumper connectors

AFL No. 2 Electrical Joint Compound

(No. 2 EJC)

AFL No. 2 Electrical Joint Compound (EJC) is the recommended compound providing efficient and trouble free service on aluminum to aluminum and aluminum to copper connections. If No. 2 EJC is kept in a dry place, it has an infinite shelf life.

Application

Terminal to dead end connections for applications under 93° C (200° F). Flat to flat surfaces such as bus to bus, aluminum to aluminum and aluminum to copper.

Features

Lowest Electrical Resistance on Flat Surfaces

No. 2 EJC has the lowest electrical reistance on flat surfaces because it is a grease type medium that dissolves the oxide on connectors. The nature of the oxide removal is not harmful. Unlike other compounds of its kind, No. 2 EJC creates a light surface etch with no deep, localized attack. It only attacks the oxide.

Weather Resistant

No. 2 EJC adheres to pad surfaces, protecting the connection against the harmful effects of the environment.

Proven Performance

Years of service and laboratory testing have proven that AFL No. 2 EJC provides efficient and trouble free service.

Ordering Information

CATALOG NUMBER	PACKAGING
EJC10T	Carton of 10 - 7.94 oz (225 g) tubes
EJC12CAN	Carton of 12 - 1 lb. (0.45 kg) cans
EJC1GAL	1 Gallon Pail, 10 lbs. (4.5 kg)
EJC5GAL	5 Gallon Pail, 50 lbs. (22.7 kg)

For more information, contact the AFL Technical Support Team at 1.800.866.7385.

Alnox® Electrical Joint Compound

Applications

Pad to pad connections where the operating temperatures are at or below 250 °C (482 °F). Used for aluminum on aluminum, copper on aluminum, and copper on copper. Ex: Dead ends to terminals, terminals to tee taps

Features

Lowest Electrical Resistance
Alnox® contains extremely hard metalic particles with sharp and irregular shapes of carefully controlled grain size. This forms many metal to metal contact points for low resistance connections. If Alnox is kept in a dry place, it has an infinite shelf life.

Weather Resistant
Alnox® adheres to pad surfaces, protecting the connection against the harmful effects of the environment.

Wide Temperature Tolerance
Alnox® has a wide temperature tolerance. It is workable at low temperatures, -18 °C (0 °F), and does not drip at high temperatures. It has a melting point above 288 °C (550 °F).

Ordering Information

CATALOG NUMBER	PACKAGING

ALNOX12CAN	Carton of 12 - 1 lb. (0.45 kg) cans
ALNOX1GAL	1 Gallon Pail, 10 lbs. (4.5 kg)
ALNOX5GAL	5 Gallon Pail, 50 lbs. (22.7 kg)

For more information, contact the AFL Technical Support Team at 1.800.866.7385.

Alnox UG Electrical Joint Compound

Alnox UG is recommended for use in underground applications. It is recommended for Aluminum to Aluminum and Aluminum to Copper connections where compatibility to rubber products is required. It has the same chara cteristics as Alnox, but with less electrical efficiency. Stored in a dry environment, Alnox UG has an infinite shelf life.

Features

Low Electrical Resistance
Alnox UG contains extremely hard metallic particles with sharp, irregular shapes of carefully controlled grain size. This forms many metal to metal contact points for low resistance connections.

Weather Resistant
Alnox UG adheres to pad surfaces and parallel groove clamps, protecting the connection against the environment.

Wide Temperature Tolerance
It is workable at low temperatures , -18°C (0°F) and will not drip below 190° C (375° F).

Applications

- Flat to flat connections below 190° C (375° F) such as bus to bus, dead end terminals, aluminum to aluminum and aluminum to copper
- Parallel groove clamps
- Underground applications

ALNOXUG5GAL	Five gallon pail, 50 Lbs (22.7 kg)

AFL Filler Compound

AFL Filler Compound (AFC) improves the mechanical holding strength and conductivity of compression fittings. Stored in a dry environment, AFC has an infinite shelf life.

Applications

Filler compound for compression accessories operating at temperatures up to 180°C (355°F). Example: dead ends, compression joints, terminals and jumper connectors.

Features

Wide Temperature Tolerance
AFC is stiff but workable at low temperatures. To improve the workability, AFC can be diluted with 5% kerosene (by weight).

Improves Holding Strength and Conductivity
AFC contains hard, metallic particles (grit). During compression, the grit is embedded between the conductor and the accessory, creating an irregular surface which provides two benefits: (1) increases the holding strength when tension is applied and (2) improves conductivity by breaking the oxide layer on bare metal to metal connections.

Weather Resistant
AFC is forced between the conductor strands during compression, filling voids and sealing out the harmful effects of air and moisture.

Fits Standard Caulking Gun
For easy filling of compression accessories, AFC is available in a tube that fits a standard caulking gun.

Visible Fill Line
AFL is the only supplier that features a visible fill line along the length of the cartridge which allows the user to visually check the fullness of the tube.

Ordering Information

AFC5GAL	5 Gallon Pail, 55 lbs. (25 kg)

For more information, contact the AFL Technical Support Team at 1.800.866.7385.

HiTemp® AFL Filler Compound (AFCHT™)

HiTemp AFL Filler Compound (AFCHT) is the recommended filler for compression fittings due to its ability to improve the mechanical holding strength and conductivity of the connection. It has been designed to withstand the increased temperatures of high temperature/low sag conductors (ACSS and ACCR). Kept in a dry place, AFCHT has an infinite shelf life.

Application

Filler Compound for compression accessories installed on conductors operating at temperatures up to 250°C (482°F). Compression accessories include dead ends, joints, terminals and jumper connectors.

Features

Wide Temperature Tolerance
AFCHT has a wide temperature range. It is workable at low temperatures and does not drip at high temperatures. It has a melting point above 250°C (482°F).

Improves Holding Strength and Conductivity
AFCHT contains hard metallic and non-metallic particles, otherwise known as 'grit'. During compression, the compound grit is embedded between the conductor and the accessory, creating an irregular surface. This irregular surface has two features: (1) increases the holding strength when tension is applied and (2) improves conductivity by forming a bare metal to metal connection.

Moisture Resistant
As the accessory is compressed, AFCHT is forced between the conductor strands, sealing out the harmful effects of water.

Fits Standard Caulking Gun
For easy filling of compression accessories, AFCHT is available in a tube that fits a standard caulking gun.

60S/DC Hyrdraulic Press

The 60-Ton Single or Double-Acting Press is unsurpassed in the industry. The compression tool develops 60 tons of force at 10,000 PSI for the installation of electrical compression fittings. The major feature of this tool is a double-acting ram head. The result is more positive retraction, which reduces cycle time. A special piston facilitates operation in single or double-acting mode.

Features

- 60 tons of force
- Larger capacity for transmission and distribution applications
- Easy die installation
- Double-acting conversion kit included
- Hinged flip-top head
- Carrying handle for portability
- Pressure matched quick couplers supplied
- Metal carrying case

Technical Data

PARAMETER	VALUE
Crimping Force	62.8 US Tons (57.0 Metric Tons)
Operating Pressure	10,000 PSI 70,000 kPa (700 bar)
Crimping Capacity	1590 MCM (804.54 mm2) Aluminum and Copper
Overall Length	11.3 in (28.72 cm)
Overall Width	6.0 in (15.24 cm)
Overall Height	17.04 in (43.28 cm)
Tool Weight	72.0 lbs (32.65 kg)

Ordering Information

AFL NO.	DESCRIPTION

100A Hydraulic Press

The 100A Single or Double Acting Press is designed for the installation of compression fittings. The 100A develops 100 tons of force at 10,000 PSI. A special piston facilitates operation in single or double acting mode. Redesigned for portability, the press now weighs 95 pounds.

Features

- 100 tons of force
- Larger capacity for transmission and distribution applications
- Easy die installation
- Carrying handles for portability
- Capacity for all U or shell-type dies
- Metal carrying case
- Pressure matched quick coupler supplied
- Double acting conversion kit included
- Suspension eye supplied

Technical Data

PARAMETER	VALUE
Crimping Force	100.0 US Tons (90.8 Metric Tons)
Operating Pressure	10,000 PSI 70,000 kPa (700 bar)
Crimping Capacity	Up to 3.25 in (8.26 cm) conductor diameter
Overall Width	8.25 in (20.96 cm)
Overall Height	15.00 in (38.10 cm)
Tool Weight	95.0 lbs (43.2 kg)

Ordering Information

AFL NO.	DESCRIPTION
100A	100 Ton Single/Double Acting Press with Metal Case

WARNING: Do not operate any compression tool without dies.

15GBM Gas Hydraulic Pump

The 15GBM is a gas powered pump that produces 10,000 PSI of hydraulic pressure. It is designed to handle any high pressure tool up to and including the 60 ton press. The two-stage pumping system allows for rapid ram advance. The "suc-o-matic" valve helps tools retract faster. The manual control has three settings: advance, hold and retract. Whether making one crimp or 1,000 crimps, the 15GBM is the lightweight, portable answer.

Features

- 10,000 PSI high-pressure pump
- Powered by a 3.75 HP Briggs and Stratton engine
- Manual control valve
- Designed to operate single acting tools
- High pressure relief valve
- Pressure matched quick coupler supplied
- Protective carrying cage
- "Suc-o-matic" valve reduces retraction time
- Sight gauge to determine hydraulic oil level

Technical Data

PARAMETER	VALUE
Gas Powered Motor	3.75 HP Briggs and Stratton Engine
Control	Manual control valve
Oil Delivery per minute	400 cu in @ 600 PSI 50 cu in @ 10,000 PSI
Oil Reservoir	2 gallons (7.40 liters)
Overall Length	12.25 in (31.12 cm)
Overall Width	12.25 in (31.13 cm)
Overall Height	20.25 in (51.44 cm)
Pump Weight with oil	53 lbs (24.09 kg)

Ordering Information

AFL NO.	DESCRIPTION
15GBM	10,000 PSI Gas Powered Hydraulic Pump with Manual Control

WARNING: Do not operate any compression tool without dies.

30GBM Gas Hydraulic Pump

The 30GBM is a gas powered pump that produces 10,000 PSI of hydraulic pressure. It is designed to operate any 10,000 PSI compression tool. The two-stage pumping system allows for rapid ram advance. The "suc-o-matic" valve helps tools retract faster. The manual control has three settings: advance, hold and retract. The 30GBM is designed for continuous duty.

Features

- 10,000 PSI high-pressure pump
- Powered by a 6 HP Briggs and Stratton engine
- Manual control valve
- Designed to operate single acting tools only
- High pressure relief valve
- Pressure matched quick coupler supplied
- Protective carrying cage
- Sight gauge to determine hydraulic oil level

Technical Data

PARAMETER	VALUE
Gas Powered Motor	6.0 HP Briggs and Stratton Engine
Control	Manual control valve
Oil Delivery per minute	430 cu in @ 400 PSI 125 cu in @ 10,000 PSI
Oil Reservoir	2 gallons (7.40 liters)
Overall Length	21.75 in (55.25 cm)
Overall Width	19.75 in (50.17 cm)
Overall Height	24.50 in (62.23 cm)
Pump Weight with oil	135 lbs (61.36 kg)

Ordering Information

30GBM	10,000 PSI Gas Powered Hydraulic Pump with Manual Control

WARNING: Do not operate any compression tool without dies.

30GHR Gas Hydraulic Pump

The 30GHR is a gas powered pump that produces 10,000 PSI of hydraulic pressure. The two-stage pumping system allows for rapid ram advance. The unloading pressure of the pump is 1,000 PSI. The 30GHR comes with a remote control with a 10 foot cord and is designed for continuous duty.

Features

- 10,000 PSI high-pressure pump
- Powered by a 5.5 HP Honda engine
- Remote control with 10 foot cord
- Designed to operate single acting and double acting tools
- High-pressure relief valve
- Pressure matched quick coupler supplied
- Protective carrying cage
- Sight gauge to monitor hydraulic oil level

Technical Data

PARAMETER	VALUE
Gas Powered Motor	5.5 HP Honda Engine
Control	Remote Control with 10 foot cord
Oil Delivery per minute	430 cu in @ 400 PSI 125 cu in @ 10,000 PSI
Oil Reservoir	2 gallons (7.40 liters)
Overall Length	21.75 in (55.25 cm)
Overall Width	19.75 in (50.17 cm)
Overall Height	24.50 in (62.23 cm)
Pump Weight with oil	135 lbs (61.36 kg)

Ordering Information

AFL NO.	DESCRIPTION
30GHR	10,000 PSI Gas Powered Hydraulic Pump with Remote Control

WARNING: Do not operate any compression tool without dies.

PE-NUT Electric Two-Stage Pump

The PE-NUT Electric Two-Stage Pump is extremely durable yet lightweight. It will operate under low-line voltage conditions. The two-stage pumping system of this unique, intermittent-duty pump is designed for years of dependable service. The PE-NUT pump is ideal for running any 10,000 PSI tool up to and including the 60 ton press.

CAUTION: Designed for Crimping Application Only! This system should not be used for lifting.

Features

- 5/8 HP universal electric motor (50/60 cycle)
- Two-stage pump for rapid ram advance
- Operational under low-line voltage conditions
- Optional operating pressures available; consult AFL for details
- Designed for use with spring-returned remote tools
- High-pressure safety relief valve
- Remote hand control with 10-foot cord
- Carrying handle
- Factory filled oil reservoir
- Pressure matched quick-coupler supplied
- Optional carrying case
- Unique, intermittent duty pump
- Piston-type high-pressure pump supercharged by a low-pressure pump

Specifications

PARAMETER	VALUE
Electric Motor	5/8 HP dual phase, 115 VAC, 50/60 Hz, 11 amps
Electric Control	Remote control with 10-foot cord
Oil Delivery per minute	160 cu. in. per min. @ 100 PSI 30 cu. in. per min. @ 10,000 PSI
Oil Reservoir	0.4 gallon (1.5 liters)
Overall Length	14.38 in (36.53 cm)
Overall Width	6.5 in (16.51 in)
Overall Height	8.25 in (20.95 in)
Pump Weight with oil	28 lbs (12.70 kg)

Ordering Information

AFL NO.	DESCRIPTION
PE-NUTC	10,000 PSI Electric Two-Stage Pump with Remote Control and Case

WARNING: Do not operate any compression tool without dies.

Hydraulic Hoses

The 1/4" (0.635 cm) non-conductive, orange hose is made of an insulated, synthetic material. It allows a high flow rate for faster ram movement. Hoses are available with or without couplers for operating pressures of 10,000 PSI with a 4-to-1 burst ratio. Hoses are pre-filled with oil and pressure tested. The hoses are 3/8" NPT male thread on both ends and quick disconnects are 3/8" NPT female.

Ordering Information

AFL NO.	DESCRIPTION
6HOSEM/M	6 Foot Hose with Male/male Couplers (1.83 Meters)
10HOSEM/M	10 Foot Hose with Male/male Couplers (3.04 Meters)
15HOSEM/M	15 Foot Hose with Male/male Couplers (4.37 Meters)
25HOSEM/M	25 Foot Hose with Male/male Couplers (7.62 Meters)
6HOSEM/F	6 Foot Hose with Male/female Couplers (1.83 Meters)
10HOSEM/F	10 Foot Hose with Male/female Couplers (3.04 Meters)
15HOSEM/F	15 Foot Hose with Male/female Couplers (4.37 Meters)
25HOSEM/F	25 Foot Hose with Male/female Couplers (7.62 Meters)

WARNING: Hoses connecting hydraulic equipment should not extend straight upward more than 25 feet (7.6 meters).

AH and SH Compression Dies—B Series

The B Series AH and SH Dies are designed to compress Standard Compression Accessories. These dies are to be used with presses that hold 12-ton dies (U-type).

Tool Safety Information

Magnaflux Test Requirements

For 60 and 100 Ton Presses

Erratic operation or extensive usage requires the inspection / repair by qualified service personnel. For the 60A and 100A Series, after two years of initial service or five thousand cycles, and each year or 2500 cycles thereafter, a magnaflux test should be made on all stress supports and pins. The magnetic particle inspection should be certified and marked on the press in the same area as the serial number. The magnaflux mark should contain 00 (month) 00 (year) - example 0797.

Tools that should be magnafluxed:

- 60AGSC
- 100A

General Usage and Care

For 60 and 100 Ton Presses

The 60 Ton and 100 Ton portable compressors are designed for the installation of electrical fittings whether in the shop or in the field. Either single acting (spring returned) or double acting (hydraulically returned) modes are available. Each unit is serial numbered (permanently marked) on the top of the piston housing base. The first two numbers of the serial number indicate the year the press was manufactured.

The greatest single cause of failure for any hydraulic equipment is dirt. Caution should be used to prevent the entry of foreign material into the equipment couplings, die retainers and swivel/locking pins. **OPERATE THE COMPRESSOR ONLY WITH THE TOP SUPPORT CLOSED AND SECURELY IN PLACE. DO NOT OPERATE COMPRESSION TOOLS WITHOUT DIES.**

WARNING: Do not operate any compression tool without dies.

Warranty

AFL warrants to the original purchaser that its product shall be free from defects in material and workmanship as follows: Hand-held and remote compression tools, all pumps and boosters are warranted for one (1) year. Products which are defective and are not misused or abused will be repaired to original specifications free of charge.

Any tool returned under warranty in working condition will be reconditioned once free of charge during the warranty period. Any required repairs will be quoted at preferential pricing at the time of repair.

The warranty card included with each product must be returned to AFL at the time of purchase. AFL uses the same high quality parts for repair as were used in the original manufacture of the product.

Products returned for warranty repair require a return material authorization (RMA), available by phone, fax, mail or e-mail from AFL. All returned products must be shipped freight prepaid. AFL reserves the right to determine all warranty claims. Repair or re-work of parts, equipment or material beyond the warranty period will be done on a quoted basis.

TERMS OF WARRANTY

This non-transferable warranty does not apply to dies or accessories; in cases of alteration, accident, abuse or misuse; or in cases of disassembly or repair by anyone other than AFL. Failure to maintain purchased products according to the seller's maintenance instructions will invalidate the warranty. The extent of AFL's obligation under the above written warranty is to repair or replace FOB the original point of delivery any products which are defective. No additional remedies are available to the purchaser.

LIMITATION OF LIABILITY

It is the user's responsibility to adhere to all normal safety procedures and regulations as specified by OSHA, other regulatory bodies and company safety practices and procedures. AFL is not responsible for injuries that occur to users of these products. Except as provided above, AFL MAKES NO OTHER WARRANTIES, EXPRESSED OR IMPLIED, AND SPECIFICALLY DISCLAIMS THE IMPLIED WARRANTIES OR MERCHANTABILITY AND FITNESS FOR PARTICULAR USE. In no event will AFL be liable for more than the purchase price of the product.

This warranty also applies outside the United States and Canada with certain limitations and restrictions. Contact AFL or your local distributor or representative for additional information.

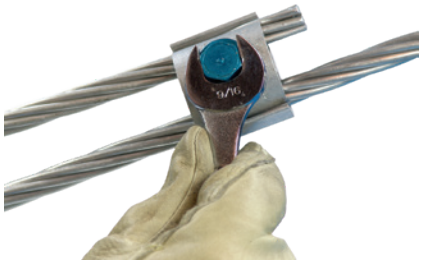
Pictorial Index

CLAMPS AND CONNECTORS

Universal Groove Clamps

Through extensive research, AFL has developed a "universal groove" design which accept a range of conductor sizes. The blended radii proved to be the shape that accommodates a wide range of conductors and have the desired low electrical resistance for each conductor size. This patented groove shape is utilized in all of AFL's clamps and connectors.



Positive Alignment and Weather Protection

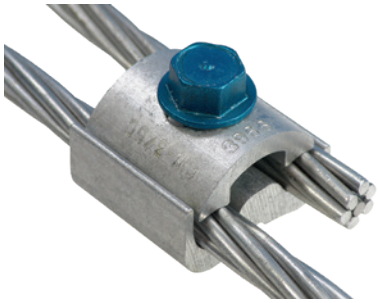
Extended lip aligns clamp as bolt is tightened. Clamp base section forms a weather shield for the grooves. Compound stays in place, connections last longer.

Corrosion Resistant Lubricated Hardware

Bolts are made of high-strength aluminum alloy and maintain high contact pressure during heating and cooling cycles (bolts, extrusions and conductors have the same coefficients). Bolts have an Alumilite 205 finish and are coated with a lubricant for additional corrosion protection and reduced friction.

No Loose Parts

Extruded clamps can be applied "hot" without taking them apart. No losing nuts or washers or fumbling for loose parts.



Conductance

The electrical conductivity of the heavy-duty 480 Series clamps exceeds that of the conductor. Each clamp is designed and tested for the conductor sizes in its stated range.

Groove Range Identification

Raised ridges on both sides of the cap and base of multiple bolt clamps identify groove range sizes. The two ridges visible on the clamp in the photo on the right, indicate a No. 2 groove with a range of 0.464" to 0.743" (11.8 mm to 18.9 mm).

Greater Strength

Aluminum extrusions have the inherently strong construction of wrought metal. For parallel groove clamps, a tough heat-treated alloy is used.

Available Prefilled

All clamps are available with Alnox Joint Compound in the grooves. Clamps with equal grooves are available in "strip" packages (shown). These packages retain the compound until ready for use and are easily removed while wearing gloves. All clamps are available poly wrapped in polyethylene shrink packaging.

Minimum Sizes to Stock

Minimum number of clamps to cover No. 8 AWG to 1750 MCM connecting applications.

No Loose Parts

Compact assembly simplifies taping and handling resulting in a neater, more professional job.

Distribution Parallel Groove Clamps (Series 390 and 490)

Catalog 390 and Catalog 490 Series Distribution Parallel Groove Clamps with a single bolt accommodate a range of conductors in each groove. This type of clamp is commonly used for service drop connections and as a tap from large to relatively small conductors.

Center Bolt Clamps (Series 480)

Catalog 480 Series Center Bolt Clamps are a multiple bolt heavy duty universal groove design which can handle the full electrical load of the conductor. They offer the convenience of installation without any loose parts. Catalog 480 Clamps are made from extruded high strength aluminum alloy and can be taped easily. Additionally, they have a minimum bulk, which results in a neat appearance.

Universal Groove Clamps (cont.)

Ordering Information

The information below is provided to define the standard configurations available on the previous pages. **NOTE: Bolt type and fill are the only ordering options available.**

Bolt Type	Clamp Series	Groove 1 "Run" Size		Groove 2 "Tap" Size	Fill and Wrap
S	39	6	.	6	P
Blank = Aluminum Bolt S = Galvanized Bolt	39 = 390 Series 49 = 490 Series 48 = 480 Series	0 = 0 5 = 5 6 = 6 1 = 1 2 = 2 3 = 3 4 = 4		0 = 0 5 = 5 6 = 6 1 = 1 7 = 7 2 = 2 3 = 3 4 = 4	Blank = No Prefill P = Prefill with Alnox Compound and Polywrap W = Prefill with Alnox Compound and Paper Wrap

1. To order Parallel Groove Clamps prefilled with Alnox Compound, add P or W suffix to part number.
2. The use of Alnox Compound liberally in grooves and on wire is recommended. Be sure conductors are clean. All conductors (new and old) should be thoroughly cleaned with a wire brush or emery cloth.
3. Extensive field experience and exposure tests show that if a suitable type joint compound is liberally applied over and around the contact area, copper-to-aluminum electric connections can be made satisfactorily with aluminum clamps without copper bushings. Alnox Compound is recommended.
4. Petroleum-free compound, Alnox UG, is available for pre-filled clamps. For Alnox UG, add "-UG" to end of part number.
   Ex: 396.6P-UG, 396.6W-UG

EXAMPLE: S396.6P

This part number orders: 390 Series Distribution Parallel Groove Clamp with a #6 groove on the run (1) side and a #6 groove on the tap (2) side, galvanized bolts and prefilled with Alnox Compound and a polywrap.
