

Pre-terminated Copper Cable Assemblies

AFL can offer a fully pre-terminated and factory tested copper cabling solution, for Category 6_A shielded and Category 6 unshielded solutions. AFL offers you the flexibility to have one end or both ends terminated for use in cross connects, or consolidation points.

Pre-terminated cables offer the advantage of reduced time and cost associated with on-site cable terminations. They are ideally suited where narrow installation timeframes are applicable or on-site terminations are hazardous or pose OH&S issues. As these are configured specifically to customer requirements, call one of our local offices for advice and pricing.

Features and Benefits

- Reduce installation time by 75%
- Switch upgrades are faster and easier
- MAC work can be handled by onsite staff
- Reduced mess and cleanup
- Better cable management
- Re-useable cables
- Throughput guaranteed
