

## CCT – Connector Cleaning Tips

AFL is pleased to offer a unique technology in fibre connector end-face cleaning. Rather than a fabric-covered or foam-covered stick, we are offering a molded cleaning tip that will trap contamination and wick cleaning solvents from bulkhead connectors. The cleaning tip is a molded, sintered polymer that is both porous and pliable conforming to virtually any fibre end-face polish geometry while trapping and absorbing contaminants.

### Features

- Molded sintered polymer construction assures perfect bulkhead fit and consistent performance with each cleaning tip
- No fibres, binders, adhesives or outgassing that may contaminate the connector
- Traps and holds liquid and particle contaminants in an absorbent open cell matrix ranging from 10-25 microns
- The elastic cleaning head enhances entrapment of particles and oils, while allowing the tip to conform to virtually any fibre end-face geometry (8 degree, domed polish, etc.)
- Very absorbent
- US and Foreign patents pending

### Tip Configurations

- **CCTS and CCTX series:** cleaning tip is exposed for cleaning ferrule end-faces in alignment sleeves that are recessed within sockets or bulkhead adaptors.
- **CCTP series:** cleaning tip is recessed in the “straw” for cleaning exposed ferrules and termini (jumpers). Fits 2.5 mm and smaller ferrules.

### Ordering Information

Cleaning tips are available for most common commercial and Mil Spec ferrule sizes.
